INTRODUCTION

The Redmond Paired Watershed Study (RPWS) is one of several effectiveness monitoring studies that was selected for implementation starting in 2014 for the Stormwater Action Monitoring (SAM) program for Puget Sound. The goal of effectiveness monitoring under the SAM program is to provide widely applicable information for improving stormwater management in the region. Phase I and Phase II Municipal Stormwater Permittees in the Puget Sound Region contribute to a Pooled Stormwater Resources Fund that supports the SAM program and associated effectiveness monitoring studies. Selection of the RPWS for implementation under the SAM program was made based on a monitoring proposal that was presented to permittee representatives at workshops that were held on March 20, 2014, and May 6, 2014. The specific study question to be addressed through the RPWS is as follows:

> ***How effective are watershed rehabilitation efforts at improving receiving water conditions at the watershed scale?***

To address this study question, a conceptual experimental design for the RPWS was subsequently developed and summarized in the *Redmond Paired Watershed Study Experimental Design Report* (Herrera 2015a). This conceptual experimental design was informed by a literature review (Herrera 2015b) that was conducted to identify lessons learned from past studies that have been implemented to achieve similar objectives. The conceptual experimental design was also developed based on input from a technical advisory committee (TAC) that was formed for the study. This TAC currently includes representation from the following jurisdictions and agencies:

City of Redmond

City of Kirkland

City of Seattle

King County

US Geological Survey

Washington State Department of Ecology (Ecology)

Building on this previous work, a Quality Assurance Project Plan (QAPP) was developed to guide the implementation of all subsequent phases of the RPWS (Herrera 2015c). This QAPP documents the experimental design and procedures that will be used during data collection, processing, and analysis to ensure all results obtained for the RPWS are scientifically defensible.

Monitoring pursuant to this QAPP initiated in 2016 and is anticipated to continue for a 10-year time frame. Data summary reports will be prepared on an annual basis over this period to summarize compiled monitoring data collected through each of the major components of the RPWS. These reports

will also document any quality assurance issues associated with these data and resultant limitations (if any) on their use or interpretation. Finally, these reports will document all rehabilitation efforts that have been implemented by the City of Redmond (City) or King County (County) over the previous year. Included will be detailed information on the design and operational status of structural stormwater controls and the frequency and geographic extent of nonstructural stormwater control implementation. Each annual data summary report will document this information based on monitoring that was conducted over the previous water year (i.e., October through September). Data summary reports (Herrera 2017, 2018, 2019, 2020a, 2021a, 2023a) were prepared previously for data collected over water year (WY) 2016 through WY2021.

In years 4, 8, and 10 of the RPWS' implementation, trend analyses reports will also be prepared as companion documents to the data summary reports described above (note WY2022 represents year 7 of the RPWS' implementation). These reports will summarize the results of statistical analyses that will be performed on the compiled data from all previous years of monitoring to detect potential relationships between rehabilitation efforts and improved receiving water conditions. Each report will also present major conclusions from these analyses. A trend analysis report (Herrera 2020b) was prepared following year 4 of the RPWS' implementation.

This document represents the data summary report for monitoring that occurred over WY2022 for the RPWS. It is organized to include the following sections:

- Background: An explanation of why the project is needed
- Experimental Design: The sampling process design for the study, including sample types, monitoring locations, and sampling frequency
- Monitoring Procedures: A description of any major deviations from the monitoring procedures that were identified in the QAPP for the study (Herrera 2015c).
- Rehabilitation Effort Summary: A description of all watershed rehabilitation efforts that were implemented by the City or County over WY2022 and previous water years.
- Monitoring Results Summary: A summary of compiled monitoring data collected through each of the major components of the study.

BACKGROUND

Municipal Stormwater Permits are issued by Ecology to regulate discharges from separated storm sewers owned or operated by Phase I and Phase II cities and counties. The Municipal Stormwater Permits establish the minimum requirements for permittees to address existing and future impacts to receiving waters from urbanization. Municipal Stormwater Permits require cities and counties to execute programmatic (nonstructural) activities and establish design standards for stormwater structural controls triggered by development and redevelopment (onsite stormwater management, runoff treatment, and flow control facilities). Ideally, if all developed land in a watershed is equipped with nonstructural and structural stormwater controls, the receiving water would be protected from hydrologic and water quality impacts caused by urbanization. However, while the effectiveness of nonstructural and structural controls has been well documented at the site and parcel scale, limited data exists on the effectiveness of these controls in aggregate for improving conditions in receiving waters at the watershed scale (Herrera 2015b).

In February 2014, Ecology approved a Citywide Watershed Management Plan (WMP) (Herrera 2013) for the City that coordinates stormwater management efforts from the Municipal Stormwater Permit, Section 303(d) of the Clean Water Act, and salmon recovery to allow use of a watershed approach for improving receiving water conditions. Through the implementation of this WMP, the City will focus stormwater best management practices (BMPs) in a subset of priority watersheds that are moderately impacted by urbanization and therefore expected to respond more quickly to rehabilitation efforts. This provides a unique opportunity to study the effectiveness of stormwater BMPs for improving receiving water conditions on an accelerated time frame and at a watershed scale. Recognizing this opportunity, the City is implementing the RPWS to quantify improvements in receiving water conditions with support from the SAM program.

EXPERIMENTAL DESIGN

As described in the *Introduction* to this report, the specific study question to be addressed through the RPWS is as follows:

> *How effective are watershed rehabilitation efforts at improving receiving water conditions at the watershed scale?*

In this context, rehabilitation efforts could include any of the following practices:

- Stormwater management retrofits in upland areas that could include facilities for onsite stormwater management (e.g., low impact development [LID] practices, runoff treatment, and flow control)
- Onsite stormwater management facilities required due to Municipal Stormwater Permit requirements for development and redevelopment
- Riparian and in-stream habitat improvements
- Programmatic practices for stormwater management

To answer the study question identified above, the experimental design for the RPWS has two primary components:

- Status and Trends Monitoring: Routine and continuous measurements of various hydrologic, chemical, physical habitat, and biological indicators of stream health over an extended time frame to quantify improvements in receiving water conditions in response to watershed rehabilitation efforts.
- Effectiveness Monitoring: Measurements of hydrologic and chemical parameters over a relatively short time frame to document the effectiveness of specific structural stormwater controls that have been constructed to improve receiving water conditions.

The Status and Trends Monitoring utilizes a "paired watershed" experimental design that involves collecting these measurements in seven watersheds categorized as follows:

- Three "Application" watersheds with wadeable lowland streams that are moderately impacted by urbanization and prioritized for rehabilitation efforts.
- Two "Reference" watersheds with relatively pristine wadeable lowland streams that do not require rehabilitation.
- Two "Control" watersheds with wadeable lowland streams that are significantly impacted by urbanization and not currently prioritized for rehabilitation.

Table 1 identifies the name, predominant land use/cover, and size of each watershed; the location of all the watersheds is shown in Figure 1. A detailed summary of conditions within each watershed is also provided in the QAPP that was prepared for the study (Herrera 2015c) with information on planned rehabilitation efforts in the Application watersheds as applicable.

Table 1. Application, Reference, and Control Watersheds for the Redmond Paired Watershed Study.

Watershed Name	Watershed Type	Dominant Land Use/Cover	Watershed Total Area (acres)	Watershed Area Inside Redmond (acres)
Evans Creek Tributary 108	Application	Residential	397	0[a]
Monticello Creek	Application	Residential/Commercial	345	264
Tosh Creek	Application	Residential/Commercial	299	276
Colin Creek[a]	Reference	Forest	1,990	90
Seidel Creek[a]	Reference	Forest	1,188	615
Country Creek	Control	Residential/Commercial	212	212
Tyler's Creek	Control	Residential/Commercial	168	167

[a] Watershed is in unincorporated King County.

Fixed monitoring stations were established in each watershed for monitoring various indicators of stream health. Due to the scale of the RPWS and the anticipated lag between applying stormwater controls and resultant improvements in receiving water conditions, quantifying a cause and effect relationship between these events may take many years. Therefore, monitoring at the fixed monitoring stations will occur over an anticipated 10-year time frame. Furthermore, because the effectiveness of watershed rehabilitation practices (e.g., stormwater retrofits, in-stream habitat improvements, and programmatic practices) may vary for different types of receiving water impairments, a broad suite of indicators for assessing potential improvements are being monitored within the following categories: hydrologic, water quality, physical habitat, sediment quality, and biological. The pattern of interest will be evidence that receiving water conditions are improving based on one or more of these indicators in the Application watersheds while conditions in the Reference and Control watersheds remain relatively static.

The following subsections provide more detailed information on the Status and Trends Monitoring and Effectiveness Monitoring, respectively, including the monitoring stations, measurement frequency, indicators, and data analysis methods where applicable.

Status and Trends Monitoring

This section describes the monitoring stations, measurement frequency, indicators, and data analysis methods that will be used for the Status and Trends Monitoring component of the RPWS. This information is organized under separate subsections for the following monitoring categories: hydrologic, water quality, physical habitat, sediment quality, and biological. The specific indicators of stream health that will be evaluated in these categories are also summarized in Table 2 with their associated measurement frequency. Note significant changes to the experimental design for the Status and Trends Monitoring were made in WY 2022 relative to the original QAPP. These changes are described in detail in the *Monitoring Procedures* section (page 37).

Table 2. Indicators of Stream Health for the Redmond Paired Watershed Study.

Indicator	Measurement Frequency
Hydrology Monitoring

Hydrologic Monitoring

A total of 14 fixed monitoring stations were established at the onset of the study to facilitate hydrologic monitoring in each of the study watersheds. Starting in WY 2022, monitoring has occurred at 12 fixed monitoring stations; see further explanation in the *Monitoring Procedures* section (page 37). As noted in the literature review (Herrera 2015b) that was performed to inform the experimental design for the RPWS, numerous studies have been conducted with similar goals, but they have generally been conducted at the subbasin scale. In these studies, a hydrologic monitoring station was typically located at the outlet of the study subbasin. Therefore, efforts were made to establish hydrologic monitoring stations at the outlet of each of the study watersheds. However, because the watersheds are relatively large and because much of the rehabilitation will occur in the upper reaches of the Application watersheds, efforts were made to establish hydrologic monitoring stations at a mid-point location in each of the study watersheds as well. This goal could not be achieved for all study watersheds due to issues relating to their size and drainage patterns. The following deviations are specifically noted:

- Monticello Creek has two major tributaries that will be the target of rehabilitation efforts; therefore, three hydrologic monitoring stations were established in the watershed at the outlet and on each of the tributaries.
- The relatively pristine reach of Colin Creek that was identified for monitoring is confined to the Redmond Watershed Preserve Park. Because the watershed area within this park is relatively small, only one hydrologic monitoring station was established in this watershed.
- The relatively pristine reach of Seidel Creek that was identified for monitoring is confined to the Redmond Watershed Preserve Park. Within this area, two major tributaries of the creek flow into a large wetland complex near the border of the park. To avoid confounding hydrologic and water quality influences from this wetland, hydrologic monitoring stations were established on each tributary; and no outlet station was identified.

In addition to these considerations, the specific location of each monitoring station was also influenced by safety and property access issues. The monitoring stations established in each of the study watersheds are as follows:

Application Watersheds

- Evans Creek Tributary 108: Two stations designated Lower Stream Station (EVALSS) and Midstream Station (EVAMS), respectively (see locations in Figure 2). Evans Creek was dropped from the study in WY 2022; see further explanation in the *Monitoring Procedures* section (page 37).
- Monticello Creek: One station at the mouth designated Mont-Mouth (MONM); one station at the approximate midpoint of the watershed on the north tributary designated Mont–Mid-N (MONMN); and one station at the approximate midpoint of the watershed on the south tributary designated Mont–Mid-S (MONMS) (see locations in Figure 3).
- Tosh Creek: One station at the mouth designated Tosh-Mouth (TOSMO); and one station at the approximate midpoint of the watershed designated Tosh-Mid (TOSMI) (see locations in Figure 4).

Reference Watersheds

- Colin Creek: One station at the approximate midpoint of the watershed designated Colin-Mid (COLM) (see locations in Figure 5).
- Seidel Creek: One station at the approximate midpoint of the watershed on the north tributary designated Seidel-Mid-N (SEIMN); one station at the approximate midpoint of the watershed on the south tributary designated Seidel-Mid-S (SEIMS) (see locations in Figure 6).

Control Watersheds

- Country Creek: One station at the mouth designated Country-Mouth (COUMO); and one station at the approximate midpoint of the watershed designated Country-Mid (COUMI) (see locations in Figure 7).
- Tyler's Creek: One station at the mouth designated Tylers-Mouth (TYLMO); and one station at the approximate midpoint of the watershed designated Tylers-Mid (TYLMI) (see locations in Figure 8).

Continuous flow monitoring was originally planned to occur at all 14 monitoring stations for the duration of the RPWS; however, monitoring at the stations located in the Evans Creek watershed was suspended after WY2011 (see more detailed discussion in the *Monitoring Procedures* section). Data from the continuous flow monitoring will be processed to calculate the following indicators for evaluating hydrologic impacts from urban development as described in DeGasperi et al. (2009):

- **High flow pulse:** Occurrence of daily average flows that are equal to or greater than a threshold set at twice (two times) the long-term daily average flow rate.
  - *High pulse count*: Number of days each water year that discrete high flow pulses occur.
  - *High pulse duration*: Annual average duration (in days) of high flow pulses during a water year.
  - *High pulse range*: Range in days between the start of the first high flow pulse and the end of the last high flow pulse during a water year.
- **Low flow pulse:** Occurrence of daily average flows that are equal to or less than a threshold set at 50 percent of the long-term daily average flow rate.
  - *Low pulse count*: Number of times each calendar year that discrete low flow pulses occurred.
  - *Low pulse duration*: Annual average duration (in days) of low flow pulses during a calendar year.
  - *Low pulse range*: Range in days between the start of the first low flow pulse and the end of the last low flow pulse during a calendar year.
- **Flow Reversal:** The number of times that the flow rate changed from an increase to a decrease or vice versa during a water year. Flow changes of less than 2 percent are not considered.
- **Richards-Baker (RB) flashiness index:** A dimensionless index of flow oscillations relative to total flow based on daily average discharge measured during a water year.
- **Flashiness ($T_{Q\ Mean}$):** The fraction of a year that mean daily discharge exceeds annual mean discharge.

- **Storm flow volume:** Total discharge volume during storm events over a water year.
- **Base flow volume:** Total discharge volume during base flow over a water year.
- **Total flow volume:** Total discharge volume over a water year.

Trends over time at each monitoring station will be evaluated using parametric (Pearson's r) and nonparametric (Kendall's tau or Spearman's rho) tests of correlation between these indicators and time. Statistical significance of the correlation coefficients will be evaluated based on an α-level of 0.05 for a one-tailed test. The pattern of interest will be evidence that receiving water conditions are improving based on the detection of statistically significant trends in the data for one or more of these indicators in the Application watersheds while these same trends are not detected in the data for the same indicators in the Reference and Control watersheds.

Water Quality Monitoring

A total of 14 fixed monitoring stations were established at the onset of the study to facilitate water quality monitoring in each of the study watersheds. Starting in WY 2022, monitoring has occurred at 12 fixed monitoring stations; see further explanation in the *Monitoring Procedures* section (page 37). These stations were co-located with the monitoring stations described above for hydrologic monitoring (see Figures 2 through 8). Twelve grab samples will be collected annually during storm events (three each quarter) at each of the 14 monitoring stations for the duration of the RPWS. In addition, four grab samples will also be collected annually during base flow (one each quarter) at these stations. Each sample will be analyzed for the following indicators for evaluating water quality impacts from urban development:

- Total suspended solids
- Turbidity
- Conductivity
- Hardness
- Dissolved organic carbon
- Fecal coliform bacteria
- Total phosphorus
- Total nitrogen
- Copper, total and dissolved
- Zinc, total and dissolved

In addition, *in situ* probes will be used to continuously measure temperature at each station and conductivity at the following subset of stations: EVALSS, EVAMS, MONM, MONMS, TOSMO, SEIMN, SEIMS, COUMO, and TYLMO.

Trends over time at each monitoring station will be evaluated using parametric (Pearson's r) and nonparametric (Kendall's tau or Spearman's rho) tests of correlation between these indicators and time. Where possible, variation in the indicator data related to changes in stream flow will be removed prior to performing the correlation analyses using methods described in Helsel and Hirsch (2002). Use of these methods is generally applicable for indicators that tend to increase (or decrease) as a function of flow (e.g., total suspended solids). By removing this variation, trends in the indicator data can be more readily detected in the correlation analyses. In all cases, statistical significance of the correlation coefficients will be evaluated based on an α-level of 0.05 for a one-tailed test.

The sample frequency identified above for water quality monitoring was evaluated using power tests that were performed for totals suspended solids and total zinc. Power tests are used to determine the probability of detecting a trend given: 1) sample size, 2) the desired α-level, 3) magnitude of the trend, and 4) amount of variation within the data. With 16 samples collected annually (12 samples during storm events and 4 samples during base flow) over a 10-year period and a desired α-level of 0.05, results from these tests showed there was a 66 to 100 percent probability of detecting a 4 milligram per liter (mg/L) decrease in total suspended solids concentrations depending on the variability that is assumed for the data and characteristics of the trend over time (i.e., linear or non-linear). These same tests showed there is a 38 to 100 percent probability of detecting a 2 microgram per liter (µg/L) decrease in total zinc concentrations. Results from these tests are documented in the QAPP that was prepared for the study (Herrera 2015c).

Annual mass load estimates will also be derived for the following subset of indicators using the nonparametric "smearing" approach described in Helsel and Hirsch (2002): total suspended solids, total phosphorus, total nitrogen, total copper, and total zinc. Trends over time at each monitoring station will again be evaluated using parametric (Pearson's r) and nonparametric (Kendall's tau or Spearman's rho) tests of correlation between these mass load estimates and time. Statistical significance of the correlation coefficients will be evaluated based on an α-level of 0.05 for a one-tailed test. These analyses will be used to detect potential improvements in receiving water conditions from the combined effects of improved water quality and reduced stormwater runoff.

In all cases, the pattern of interest will be evidence that receiving water conditions are improving based on the detection of statistically significant trends in the data for one or more of these indicators in the Application watersheds while the same trends are not detected in the data for the same indicators in the Reference and Control watersheds.

Physical Habitat Monitoring

A total of 19 fixed monitoring stations were established to facilitate physical habitat monitoring in each of the study watersheds. Starting in WY 2022, monitoring has occurred at 17 fixed monitoring station; see further explanation in the *Monitoring Procedures* section (page 37). As described in the literature review (Herrera 2015b) that was performed to inform the experimental design for the RPWS, most past studies that have been performed to assess physical habitat response to watershed rehabilitation were conducted in reaches where channel rehabilitation measures were directly applied. Consequently, they were designed to only assess the localized effects of these efforts. The RPWS involves both localized channel rehabilitation and watershed scale rehabilitation through the application of structural and

programmatic practices for stormwater management. Therefore, a synoptic approach was applied for establishing monitoring stations for physical habitat monitoring where stations were established in the Application watersheds in reaches that will be restored and in reaches where no physical alterations to the channel are planned. In this way, the RPWS can assess physical habitat response to both localized and basin-wide rehabilitation efforts. In addition to these considerations, the specific location of each monitoring station was also influenced by safety and property access issues. The monitoring stations established in each of the study watersheds are as follows:

Application Watersheds

- Evans Creek Tributary 108: Two stations designated Lower Stream Station (EVALSS) and Midstream Station (EVAMS), respectively (see locations in Figure 2).
- Monticello Creek: Five stations designated MONT-1, MONT-2, MONT-3, MONT-4, and MONT-5, respectively (see locations in Figure 3).
- Tosh Creek: Four stations designated TOSH-1, TOSH-2, TOSH-3, and TOSH-4, respectively (see locations in Figure 4).

Reference Watersheds

- Colin Creek: One designated COLIN-1 (see locations in Figure 5).
- Seidel Creek: Three stations designated Seidel-1, Seidel-2, and Seidel-3, respectively (see locations in Figure 6).

Control Watersheds

- Country Creek: Two stations designated Country-1 and Country-2, respectively (see locations in Figure 7).
- Tyler's Creek: Two stations designated Tylers-1 and Tylers-2, respectively (see locations in Figure 8).

The following monitoring stations were specifically selected to measure the localized physical habitat response in reaches that have either been recently restored or are likely to be restored in the future:

- MONT-3
- MONT-4
- MONT-5
- TOSH-1
- TOSH-3
- TOSH-4

Physical habitat monitoring will be conducted annually at each monitoring station for the duration of the RPWS. The characteristic bed-form type will be recorded at each monitoring station, and physical habitat

quality indicators will be measured at 11 cross-sections (transects) and thalweg (line of steepest descent along the streambed) profile for each habitat monitoring station.

The following indicators will be measured in connection with this monitoring:

- Bed stability
- Channel dimensions
- Fish cover
- Habitat dimensions
- Habitat unit extents
- Large woody debris
- Riparian cover
- Riparian disturbance
- Riparian vegetation structure
- Sinuosity
- Substrate

The pattern of interest will be evidence that receiving water conditions are improving based on the detection of trends in the data for one or more of these indicators in the Application watersheds while the same trends are not detected in the data for the same indicators in the Reference and Control watersheds.

Sediment Quality Monitoring

A total of 19 fixed monitoring stations were established at the onset of the study to facilitate sediment quality monitoring in each of the study watersheds. Starting in WY 2022, monitoring has occurred at 17 fixed monitoring stations; see further explanation in the *Monitoring Procedures* section (page 37). These stations were co-located with the monitoring stations described above for physical habitat monitoring (see Figures 2 through 8). Sediment samples will be collected annually at all 19 monitoring stations for the duration of the RPWS. Each sample will be analyzed for the following indicators for evaluating sediment quality impacts from urban development:

- Total organic carbon
- Copper
- Zinc
- Polycyclic aromatic hydrocarbons
- Phthalates

Trends over time at each monitoring station will be evaluated using parametric (Pearson's r) and nonparametric (Kendall's tau or Spearman's rho) tests of correlation between these indicators and time. Statistical significance of the correlation coefficients will be evaluated based on an α-level of 0.05 for a one-tailed test. The pattern of interest will be evidence that receiving water conditions are improving based on the detection of statistically significant trends in the data for one or more of these indicators in the Application watersheds while the same trends are not detected in the data for the same indicators in the Reference and Control watersheds.

Biological Monitoring

A total of 19 fixed monitoring stations were established at the onset of the study to facilitate biological monitoring in each of the study watersheds. Starting in WY 2022, monitoring has occurred at 17 fixed monitoring stations; see further explanation in the *Monitoring Procedures* section (page 37). These stations were co-located with the monitoring stations described above for physical habitat monitoring (see Figures 2 through 8). Benthic macroinvertebrate samples will be collected annually at each monitoring station for the duration of the RPWS. Each sample will be processed to calculate the following indicators for use in evaluating stream health:

- Benthic Index of Biotic Integrity (B-IBI)
- Taxa Richness
- Ephemeroptera Richness
- Plecoptera Richness
- Trichoptera Richness
- Clinger Percent
- Long-Lived Richness
- Intolerant Richness
- Percent Dominant
- Predator Percent
- Tolerant Percent

Trends over time at each monitoring station will be evaluated using parametric (Pearson's r) and nonparametric (Kendall's tau or Spearman's rho) tests of correlation between these indicators and time. Statistical significance of the correlation coefficients will be evaluated based on an α-level of 0.1 for a one-tailed test. The pattern of interest will be evidence that receiving water conditions are improving based on the detection of statistically significant trends in the data for one or more of these indicators in the Application watersheds while the same trends are not detected in the data for the same indicators in the Reference and Control watersheds.

The sampling frequency identified above for biological monitoring was evaluated using the power tests described above in the *Water Quality Monitoring* subsection. With samples collected annually over a 10-year period and a desired α-level of 0.05, results from these tests showed there was a 63 to 96 percent probability of detecting a 9-unit increase in B-IBI scores (equivalent to a change from "fair" to "good" in biological condition) depending on the variability that is assumed for the data and characteristics of the trend over time (i.e., linear or non-linear). Results from these tests are documented in the QAPP that was prepared for the study (Herrera 2015c).

Effectiveness Monitoring

Roving stations will be established for the Effectiveness Monitoring component of the RPWS to verify specific structural or programmatic stormwater controls are constructed properly, performing as designed, or providing meaningful benefit. The roving stations will be moved from one year to the next once a facility's effectiveness has been verified and new facilities come online. The specific types of monitoring to be performed at each roving station will depend on the type of structural stormwater control that is being evaluated. For example, it is anticipated that only hydrologic monitoring would be performed at roving stations for facilities that are only designed for flow control (e.g., vaults). In these cases, a facility's performance would be verified based on comparisons of measured flow from the roving station to the facility's predicted flow from models used in its design. For facilities that are designed for runoff treatment, monitoring will follow guidelines from Ecology's Technology Assessment Protocol-Ecology (TAPE) (Ecology 2018) and include both hydrologic (e.g., influent and effluent flow) and water quality monitoring. In these cases, a facility's performance would be verified based on comparisons of its measured pollutant removal efficiency relative to targets that are identified in TAPE for specific treatment categories.

Effectiveness Monitoring is currently planned or ongoing for two watershed rehabilitation projects that are being implemented by the City as described in the following subsections.

Pond Retrofit Effectiveness Monitoring

In April 2021, the City retrofitted two existing stormwater detention ponds in the Monticello Creek watershed with a continuous monitoring and adaptive control (CMAC) system to improve their performance for managing peak flows during storm events. The CMAC system is designed to optimize the performance of existing stormwater detention facilities by leveraging forecast information with onsite sensors, allowing adaptive use of the full storage volume available to more closely approximate flow patterns that existed prior to land development. A proposal (Herrera 2021b) to conduct Effectiveness Monitoring on these ponds using funding from the SAM program was approved by Ecology on December 30, 2021. This monitoring was scheduled to initiate at the start of WY2022; however, the CMAC systems were not fully operational through much of WY2022 due to technical issues. These technical issues are being addressed and appear to be largely resolved; therefore, it is anticipated that the effectiveness monitoring will initiate in WY2023.

As noted in the *Introduction* section, one of the purposes of the data summary reports is to document all rehabilitation efforts that have been implemented over the previous year. This would include detailed information on the design and operational status of structural stormwater controls. To that end,

Appendix A of this report includes the following information related to the design and operation of the CMAC systems:

- Redmond Continuous Monitoring and Adaptive Control Pilot Study
- Curry East and Whistler Ridge Pond As-built Drawings
- Curry East Pond Drainage Report
- Opti Continuous Monitoring and Adaptive Control Technical Documentation
- Opti Continuous Monitoring and Adaptive Control Functional Equivalency Documentation.

Street Sweeping Effectiveness Monitoring

The trend analysis conducted by Herrera (2020b, 2020c) documented a significant decrease in total suspended solids and total copper concentrations in Monticello Creek that appeared related to a City project that progressively increased street sweeping frequency in the associated watershed. These results were consistent with another study that was implemented by the City of Seattle (SPU 2018).

To validate the effectiveness of sweeping for improving water quality, the City has obtained grant funding from King County Wastewater Treatment Division to progressively increase street sweeping in the Tosh Creek watershed. The specific goal will be to confirm street sweeping is effective at reducing total suspended solids and total copper concentrations in receiving waters. The City also intends to evaluate whether street sweeping can be effective at removing other pollutants of concern that are associated with roadway runoff. Specifically, the City will collect samples for evaluating concentrations of 6PPD-quinone (6PPD-Q) and polycyclic aromatic hydrocarbons (PAHs) during the routine water quality monitoring that is conducted for the RPWS. A widely used antioxidant in rubber tires, 6PPD-Q is an emerging contaminant in stormwater that was recently linked to acute mortality of coho salmon. PAHs are a common type of organic pollutant found in stormwater runoff that are known or probable human carcinogens and toxic to aquatic life.

This Effectiveness Monitoring specifically involved supplemental sampling and analysis for 6PPD-Q and PAHs beginning October 1, 2022, and ending September 30, 2023, in the Tosh Creek watershed (an Application watershed) and the Country Creek watershed (a Control watershed). More detailed information on this monitoring is provided in an addendum (Herrera 2022) to the QAPP for the RPWS. The first three quarters of additional sampling for 6PPD-Q and PAHs will be performed using Ecology funding designated for 6PPD-Q research. Results from this monitoring will be summarized in data summary report for WY2023 and through supplemental reporting.

REHABILITATION EFFORT SUMMARY

As noted in the previous section, the pattern of interest for this study will be evidence that receiving water conditions are improving based on one or more indicators in the Application watersheds while conditions in the Reference and Control watersheds remain relatively static. To increase the likelihood of detecting this trend, conditions in the Application watersheds were characterized over a "baseline" period prior to the implementation of any rehabilitation efforts that generally spanned WY2016. Rehabilitation efforts that have subsequently been implemented by the City or County in each of the Application watersheds are described below under the following categories: structural retrofits, programmatic controls, and habitat enhancements.

Evans Creek Tributary 108:

- Structural Retrofits
  - In WY2017, the County constructed two stormwater detention vaults within the Evans Creek Tributary 108 watershed; one was in front of addresses 20620 and 20626 NE 76th Place, and the other was in front of address 20508 NE 78th Street. Design details for these vaults are documented in Herrera (2023).

Monticello Creek:

- Structural Retrofits
  - In April 2021, the City retrofitted two existing stormwater detention ponds in the Monticello Creek watershed with a CMAC system to improve their performance for managing peak flows during storm events (see description in previous section and Appendix A). However, the CMAC systems were not fully operational through much of WY2021 and WY2022 due to technical issues. Therefore, the potential benefits of these system may not be realized until WY2023.
- Programmatic Controls
  - Using funding from a King County WaterWorks grant, the City implemented a street sweeping project in the Monticello Creek watershed:
  - Street sweeping increased from quarterly to monthly in August of WY2017 and continued throughout WY2018. The street sweeping occurred on all public roads in the watershed.
  - Beginning in October of WY2019, the frequency of street sweeping increased from once per month to twice per month. This street sweeping was implemented to meet the specific goal of improving water quality in the creek and conducted in addition to street sweeping that occurs in the watershed for other operational reasons, such as collecting leaves in fall. A more detailed summary of the street sweeping is provided in Table 3.

    Note: Trend analyses performed by Herrera (2020b, 2020c) documented a consistent and statistically significant decrease in total suspended solids and total copper concentrations in Monticello Creek that appeared to be related to the increase in street sweeping frequency. These

results are also consistent with a street sweeping study that was implemented by the City of Seattle (SPU 2018).

- Habitat Enhancements
  - In WY2017, large woody debris was installed on an approximately 400-foot-long reach of Monticello Creek that extends downstream from Northeast 122nd Street. Approximately 400 feet of additional large woody debris was installed in July of WY2018 on the downstream end of the installation from WY2017.
  - In WY2019, invasive species removal and supplemental planting was completed in an approximately 2,000-square-foot project area located at the Fischer Village Native Growth Protection Easement downstream of 178th Avenue Northeast. Fifty-five trees and 15 shrubs were planted. Himalayan blackberry (Rubus armeniacus) was removed from the project area.
  - In WY2021, three separate plantings within the riparian zone of Monticello Creek were completed by the City:
    - Approximately 0.5 acre within the Fischer Village Native Growth Protective Easement (Monticello main stem, downstream of Northeast 122nd Street) was cleared of Himalayan blackberry. Two hundred trees and 200 shrubs were planted within the project area in March 2021.
    - Approximately 0.75 acre within the Ray Meadows Native Growth Protective Easement (Monticello main stem, downstream of the Fischer Village Native Growth Protective Easement) was cleared of Himalayan blackberry in March 2021. Six hundred trees were planted in the project area in October 2021.
    - Approximately 0.68 acre within the Cameron Place Native Growth Protective Easement and City-owned land (Monticello Creek—west fork, south of Northeast 116th Street) was cleared of Himalayan blackberry and reed canarygrass in January 2021. Three hundred trees and 600 shrubs were planted in the project area during March 2021.
  - In WY2022, a restoration project was completed at Smith Woods as part of a fish passage and stream enhancement project north of Northeast 122nd Street. The planting area covered 11,369 square feet and included 304 trees, 281 shrubs, 1,516 groundcover plants, and 1,060 emergents.

Tosh Creek:

- Structural Controls

  The high flow bypass pipe weir for the Tosh Creek watershed was adjusted in July of WY2017 to divert more high flow stormwater from Tosh Creek.

- Habitat Enhancements
  - Large woody debris was installed on an approximately 300-foot-long reach of Tosh Creek in WY2017, downstream of West Lake Sammamish Parkway. In July of WY2018, adjustments were made to this large woody debris and minor slash was added to the reach.

- In WY2019, a planting was conducted in an approximately 40,000-square-foot project area located in the lower section of Tosh Creek, between West Lake Sammamish Parkway and the Sammamish River. Sixty-five shrubs and 627 trees were planted. Normal maintenance was performed at the site, including removal of the invasive species Himalayan blackberries and bittersweet nightshade (Solanum dulcamara).
- In WY2021 ongoing maintenance of the planting that occurred in WY2019 was conducted. This included planting 15 spruce trees, mulching plants, spot treating knotweed and grubbing Himalayan blackberries. In WY2022 the City performed ongoing maintenance of the planting area.

Table 3. Summary of Street Sweeping in the Monticello Creek Watershed.

Type of Sweeper	Regenerative
Percent of road cover within the basin: 83%	83% (the City did not sweep the 1.24 miles of private roads within watershed due to access issues)
Type of public roads and percent of each:	• Principal Arterial: 4% • Collector Arterial: 9% • Connector Streets: 4% • Local Access: 83%
Miles swept per year:	• Monthly: July 2017–August 2018. A total of 83.44 miles were swept during these 14 months. • Twice Monthly: September 2018–August 2019. A total of 143.04 miles were swept during these 12 months.
Average passes per year:	• Monthly: July 2017–August 2018. The watershed was swept 14 times during this time period. The biweekly sweeping was supposed to start in July 2018; however, due to an error, the contractor continued monthly sweeping until August 2018. This was addressed by adding 2 months of sweeping twice per month to the end of the contract. • Twice Monthly: September 2018–August 2019. The watershed was swept 24 times during this time period. No months were missed.

MONITORING PROCEDURES

The QAPP that was prepared for the RPWS (Herrera 2015c) provides detailed information on the monitoring procedures that are being used for each of the following categories: hydrologic, water quality, physical habitat, sediment quality, and biological. The following deviations from these monitoring procedures are noted for monitoring that took place in WY2022:

- The YSI Pro Model 2030 that was used to make discrete *in situ* measurements of water temperature and conductivity was calibrated using a 1,000 µS standard instead of a 100 µS standard as specified in the QAPP. This change was made based on manufacturer recommendations for meter calibration. Given this change, the calibration of the meter was subsequently checked before and after each sampling event using both the 100 and 1,000 µS standards to confirm the method quality objective identified in the QAPP for meter accuracy (±5 percent) was met. Results from these calibration checks were documented on standardized field forms.
- Guidelines in the QAPP indicate that storm sampling may only occur if the following criterion for antecedent conditions is met: a period of at least 24 hours preceding the event with less than 0.04 inch of precipitation. However, this guideline was deemed too restrictive following monitoring that occurred over WY2016. Hence, this criterion was changed to allow storm event sampling after a period of at least 12 hours preceding the event with less than 0.04 inch of precipitation.

In addition, the following deviations are noted for monitoring that will occur in subsequent water years:

- The QAPP for the RPWS indicates trend analyses reports should be prepared following 4, 6, 8, and 10 years of study implementation. These reports summarize the results of statistical analyses that are described in the QAPP to identify relationships between rehabilitation efforts and improving receiving water conditions. A trend analysis report (Herrera 2020b) was prepared following year 4 of the RPWS's implementation. To reduce the overall budget for the study while allowing for a longer period of data collection before conducting analyses to identify relationships between rehabilitation efforts and improving receiving water conditions, a trend analysis report following 6 years of study implementation will not be prepared. It is anticipated that trend analysis reports would still be prepared following 8 and 10 years of study implementation.
- The Evans Creek watershed is identified as an Application Watershed in the QAPP for the RPWS because it was prioritized by the County for rehabilitation efforts at the onset of the study; specifically, the County constructed two stormwater detention ponds within the watershed in WY2017. Monitoring has subsequently occurred at individual stations within this watershed over the period extending from WY2016 through WY2021. The performance of these ponds for improving receiving water conditions was analyzed in the trend analysis report that was prepared after 4 years of study implementation. Results from this analysis indicated the ponds are generally providing no measurable benefit to the creek. Because the County is not planning to implement any additional rehabilitation efforts within the Evans Creek watershed in the short-term, monitoring at all stations within this watershed has been suspended.

- The QAPP for the RPWS indicates physical habitat and sediment quality monitoring should occur every year through the anticipated 10-year time frame for study implementation. To reduce the overall budget, a decision was made to implement this monitoring every other year after WY2021. This change was deemed to be acceptable because large, year-to-year changes are not anticipated for these categories of monitoring.
- The QAPP for the RPWS indicates *in situ* probes will be used to continuously measure conductivity at the following subset of stations: EVALSS, EVAMS, MONM, MONMS, TOSMO, SEIMN, SEIMS, COUMO, and TYLMO. To reduce the overall budget, a decision was made to suspend this monitoring after WY2021. This change was deemed to be acceptable given *in situ* measurements for conductivity are still made at all stations in connection with base flow and storm event sampling.

The deviations identified above were made with concurrence from the SAM program coordinator and the TAC for the RPWS.

MONITORING RESULTS SUMMARY

This section summarizes results for the Status and Trends Monitoring component of the RPWS from monitoring that was conducted over WY2022; as noted previously, no monitoring for the Effectiveness Monitoring component of the study occurred over this period. The presentation of these results is organized under separate subsections for the following monitoring categories: hydrologic, water quality, physical habitat, sediment quality, and biological. As noted in the *Introduction* section of this document, trend analyses reports will be prepared to summarize the results of statistical analyses that will be performed on the compiled data from all previous years of monitoring to detect potential relationships between rehabilitation efforts and improved receiving water conditions. Therefore, this data summary report does not provide detailed analyses of the monitoring results from WY2022. A trend analysis report (Herrera 2020b) was prepared following year 4 of the RPWS's implementation. It is anticipated that additional trend analysis reports will be prepared following years 8 and 10 of the RPWS' implementation.

Hydrologic Monitoring

Hydrologic monitoring for WY2022 initiated on October 1, 2021, at the 12 fixed monitoring stations that are identified in the *Experimental Design* section of this document (excludes the stations in the Evans Creek watershed) and continued through September 30, 2022. In addition, continuous precipitation monitoring occurred over the same period at three separate precipitation monitoring stations: two stations were established for the RPWS – Tosh and Monticello; and one station is maintained by the County for other purposes – Trilogy (Figure 9). Each station is used for measuring precipitation in the watershed for a specific creek as follows:

- Tosh station: Tosh Creek and Country Creek
- Monticello station: Tyler Creek and Monticello Creek
- Trilogy station: Seidel Creek and Colin Creek

Line plots showing the continuous flow and precipitation data collected at each station are provided in Appendix B. The quality assurance review memorandum for these data is provided in Appendix C. The quality assurance review memorandum summarizes the results of the quality assurance review of hydrologic data collected for the WY2022 and through the end of the 2022 calendar year (December 31, 2022). As documented in the quality assurance review memorandum, the continuous flow data at each station was rated as either "fair" or "good."

HERRERA

King County Aerial (2019)

K:\Projects\Y2014\14-05806-000\Project\Report\Figure9_PrecMonitorLoc_RPWP.mxd (5/4/2020)

Two stations had significant gaps in the continuous flow data record (Table 4). The COLM station had a gap extending approximately 3 months during a period of no flow when the creek was dry. To fill this gap, missing values were replaced with 0 cubic feet per second (cfs). The MONMS station had a gap of approximately 8 hours due to a probe malfunction. This gap was filled using interpolation since the gap was relatively small.

Table 4. Gaps in Continuous Flow Data.[a]

Station	Gap Start Date, Time[b]	Gap Stop Date, Time[b]	Gap Duration in Hours	Flow Estimation Method
COLM[a]	10/1/2021 0:00	10/9/2021 0:00	240	No flow estimation method applicable. Period of no flow.
COLM[a]	8/15/2022 0:00	10/26/2022 0:00	1,728	No flow estimation method applicable. Period of no flow.
MONMS	1/7/2022 9:20	1/8/2022 5:35	8 hours	Flow estimated using interpolation due to short gap period.

[a] Gaps in data reported for the water year (October 1, 2021, through September 30, 2022).

[b] All times are reported as Pacific Standard Time.

Once a complete data record was available for all the stations using either estimated or measured flow, the continuous flow data from each station and the applicable precipitation data were post-processed using a custom program written in Visual Basic that delineates the start and stop time of individual storm events based on user selectable storm criteria (e.g., antecedent dry period, minimum rainfall, interevent dry period, etc.). The program then computes the following suite of summary statistics for each storm event:

- Precipitation start and stop times
- Precipitation duration
- Precipitation depth
- Precipitation average intensity
- Precipitation maximum intensity
- Precipitation antecedent dry period
- Flow start and stop times
- Flow duration
- Average flow rate
- Maximum flow rate
- Flow volume

Appendix D provides these summary statistics for the individual storm events that were delineated based on the continuous flow data from each station. Summary statistics computed across all the events for each station are provided in Table 5 to facilitate comparisons of flows across both stations and watersheds. The data from Appendix D are also used to evaluate criteria from the QAPP that serve as guidelines for defining the acceptability of specific storm events for sampling (see description section below).

Table 5. Summary Statistics for Storm Events by Monitoring Station.

Station	Watershed Type	Median Average Flow Rate (cfs)	Maximum Flow Rate (cfs)	Median Flow Volume (cf)	Maximum Flow Volume (cf)
MONM	A	1.37	16.22	84,099	2,066,836
MONMN	A	0.49	12.61	30,507	1,171,804
MONMS	A	0.20	2.68	12,534	256,085
TOSMO	A	0.784	15.67	50,192	1,283,866
TOSMI	A	0.34	10.43	20,976	739,511
COLM	R	0.66	20.00	55,356	2,753,166
SEIMN	R	0.57	8.52	34,986	1,050,724
SEIMS	R	0.44	5.15	26,517	658,941
COUMO	C	0.66	20.18	36,637	972,574
COUMI	C	0.12	7.93	7,223	607,446
TYLMO	C	0.61	11.19	38,634	1,272,539
TYLMI	C	0.16	2.31	9,240	258,198

cfs = cubic feet per second; cf = cubic feet

A = Application; R = Reference; C = Control

As described in the *Experimental Design* section of this document, data from the continuous flow monitoring will be processed to calculate a suite of 12 indicators for evaluating hydrologic impacts from urban development (see Table 2). Because many of the indicators are derived using the long-term daily average flow rate, these calculations will be performed in conjunction with the preparation of the trend analyses reports that are described in the *Introduction* section of this document.

Water Quality Monitoring

Water quality monitoring for WY2022 was initiated on October 1, 2021, at the 12 fixed monitoring stations that are identified in the *Experimental Design* section of this document (excludes the stations in the Evans Creek watershed) and continued through September 30, 2022. Pursuant to the QAPP that was prepared for the study (Herrera 2015c), 12 grab samples are to be collected during storm events (three each quarter). In the case of events missed due to extended dry periods, the SAM program coordinator and the TAC approved making up storms in future years. In addition, four grab samples are to be collected during base flow (one each quarter) at these same stations.

The dates when samples were collected during storm events are identified in Table 6. Three events were sampled in the first and second quarters of WY2022; two events were sampled in the third quarter; and no storm events were sampled in the fourth quarter due to dry conditions. To the extent possible, additional storm events will be sampled in subsequent water years to make up for these missed events.

The following modified criteria from the QAPP (see the *Monitoring Procedures* section) serve as guidelines for defining the acceptability of specific storm events for sampling:

- **Target precipitation depth:** A minimum of 0.25 inch of precipitation over a 24-hour period
- **Antecedent conditions:** A period of at least 12 hours preceding the event with less than 0.04 inch of precipitation

Table 6 compares these criteria to data collected in WY2022 during each sampled storm event from the precipitation monitoring stations described in the previous section (Tosh, Monticello, and Trilogy). As shown, these criteria were met for all storm events sampled over WY2022 with the following exceptions:

- March 14, 2022, event; antecedent dry period ranged from 10.8 to 12.0 hours across all stations. Though below the target of 12 hours for some of the stations, this range was deemed close enough to include the data from this event in the final dataset. As documented in Appendix D, the preceding storm event produced approximately 0.24 inch of precipitation over a 3-hour period.
- April 18, 2022, event; precipitation depth ranged from 0.23 to 0.26 inch across all stations. Though below the target of 0.25 inch for some stations, this range was deemed close enough to include the data from this event in the final dataset.

To provide additional information for assessing the acceptability of sampled storm events, line plots showing the actual time samples were collected at each station relative to the storm event hydrograph are provided in Appendix E. These plots show that approximately 71 percent of the samples were collected on the rising limb of the hydrograph; 25 percent were collected at the peak; and 4 percent were collected on the falling limb.

As described in the QAPP for the RPWS (Herrera 2015c), base flow samples should be collected following a period of at least 48 hours without rain. Table 6 shows the dates when samples were collected during base flow with a comparison to this criterion using data from the precipitation monitoring stations described in the previous section. This comparison shows the criterion was met during all base flow sampling with the following exceptions:

- December 29, 2021, event; the antecedent dry period ranged from 46.6 to 93.9 hours across all stations. Though below the target of 48 hours for some stations, this range was deemed close enough to include the data from this event in the final dataset. As documented in Appendix D, the preceding storm event produced approximately 0.07 inch of precipitation over a 1-hour period.
- February 17, 2022, event; the antecedent dry period ranged from 27.4 to 68.4 hours across all stations. Though below the target of 48 hours for some stations, this range was deemed close enough to include the data from this event in the final dataset. As documented in Appendix D, the preceding storm event produced approximately 0.05 inch of precipitation over a 1-hour period.

Field data collection forms, chain-of-custody records, laboratory reports, and data quality audit forms from the storm event and base flow sampling during WY2022 are provided in Appendix F. The memorandum documenting results from the quality assurance review that was performed on these data is provided in Appendix G. Based on this review, 48 values were qualified as estimates as documented in Table 7, and no values were rejected. The majority of the qualified values (36) were related to filtration holding times that exceeded the criteria established in the QAPP (Herrera 2015a) from the sampling events on November 11, 2021. Estimated values will be used with caution in subsequent trend analyses that will be performed for the study.

Appendix H presents tables with the following summary statistics for pollutant concentrations measured in storm event and base flow samples over WY2022:

- N (sample size)
- Minimum
- 25th Percentile
- Median
- 75th Percentile
- Maximum
- Interquartile range
- Percent detected
- Percent exceeding the water quality standard for surface waters of the state of Washington (Ecology 2022), where applicable

In addition, Appendix I presents box and whisker plots that were developed from these same data that show the minimum and maximum values (lower and upper whiskers, respectively), 25th and 75th percentile values (lower and upper box edges, respectively), and median value (line in box). When nondetect values were present in the data, a value of one-half the detection limit was used in the computation of summary statistics.

In addition to the collection of grab samples during storm events and base flow, continuous monitoring of temperature was performed at 12 of the fixed monitoring stations that are identified in the *Experimental Design* section of this document for water quality monitoring (excludes the stations in the Evans Creek watershed). Line plots showing the continuous temperature at each of these stations are provided in Appendix J. These plots also show the 7-day average of the daily maximum temperatures (7-DAYMAX) relative to the applicable aquatic life temperature criterion for surface waters of the state of Washington (Ecology 2022).

J = Value qualified as an estimate based on quality assurance review.

TSS = total suspended solids

As documented in the quality assurance review memorandum (Appendix C), the continuous temperature data at all stations were rated "good." Additionally, no substantial data gaps were reported except during the following two periods when the channel at the COLM station went dry:

- October 1, 2021, to October 9, 2021
- August 15, 2022, to October 26, 2022

Biological Monitoring

Biological monitoring for WY2022 was completed at 17 of the fixed monitoring stations that are identified in the *Experimental Design* section of this document (excludes the stations in the Evans Creek watershed) on the following dates:

- MONT-1 9/6/2022
- MONT-2 7/28/2022
- MONT-3 9/6/2022
- MONT-4 8/4/2022
- MONT-5 7/14/2022
- TOSH-1 8/3/2022

- TOSH-2 8/24/2022
- TOSH-3 8/11/2022
- TOSH-4 8/11/2022
- COLIN-1 7/14/2022
- SIDL-1 9/1/2022
- SIDL-2 7/21/2022

CMAC PILOT STUDY
FEASIBILITY AND COST/BENEFIT ANALYSIS

OVERVIEW

The purpose of this memo is to summarize the feasibility and cost/benefit analysis for retrofitting two stormwater ponds in the City of Redmond with continuous monitoring and adaptive control (CMAC) systems. The analysis consisted of assessing the planning level cost and improvement in flow durations at potential pond locations after installing a CMAC retrofit. Flow durations were brought as close as possible to pre-developed durations by adjusting the active orifice sizes and CMAC control parameters.

The analysis will be used to finalize the selection of two stormwater ponds for retrofit pilot projects and verify initial hydraulic parameters for the selected ponds so equipment can be ordered to allow installation during fall 2020. The equipment order has been identified as a critical path item and will consist of an order for the CMAC actuator assemblies that are estimated to have a 16-week lead time.

The City has identified four ponds as possible retrofit locations, with two preferred options that would allow management of the largest basin area. Each pond is located in the Monticello Creek watershed. Monticello Creek was selected as a priority watershed for restoration after completion of the City's 2013 Watershed Management Plan. The four ponds are shown in **Figure 1** and include the following:

- Whistler Ridge (preferred location)
- Curry East (preferred location)
- Taloora Aye
- Fisher Village Pond #1

Each pond was investigated to determine the benefits, feasibility, and planning-level costs of retrofitting with a CMAC system that operates using software developed by OptiRTC, Inc. (Opti).

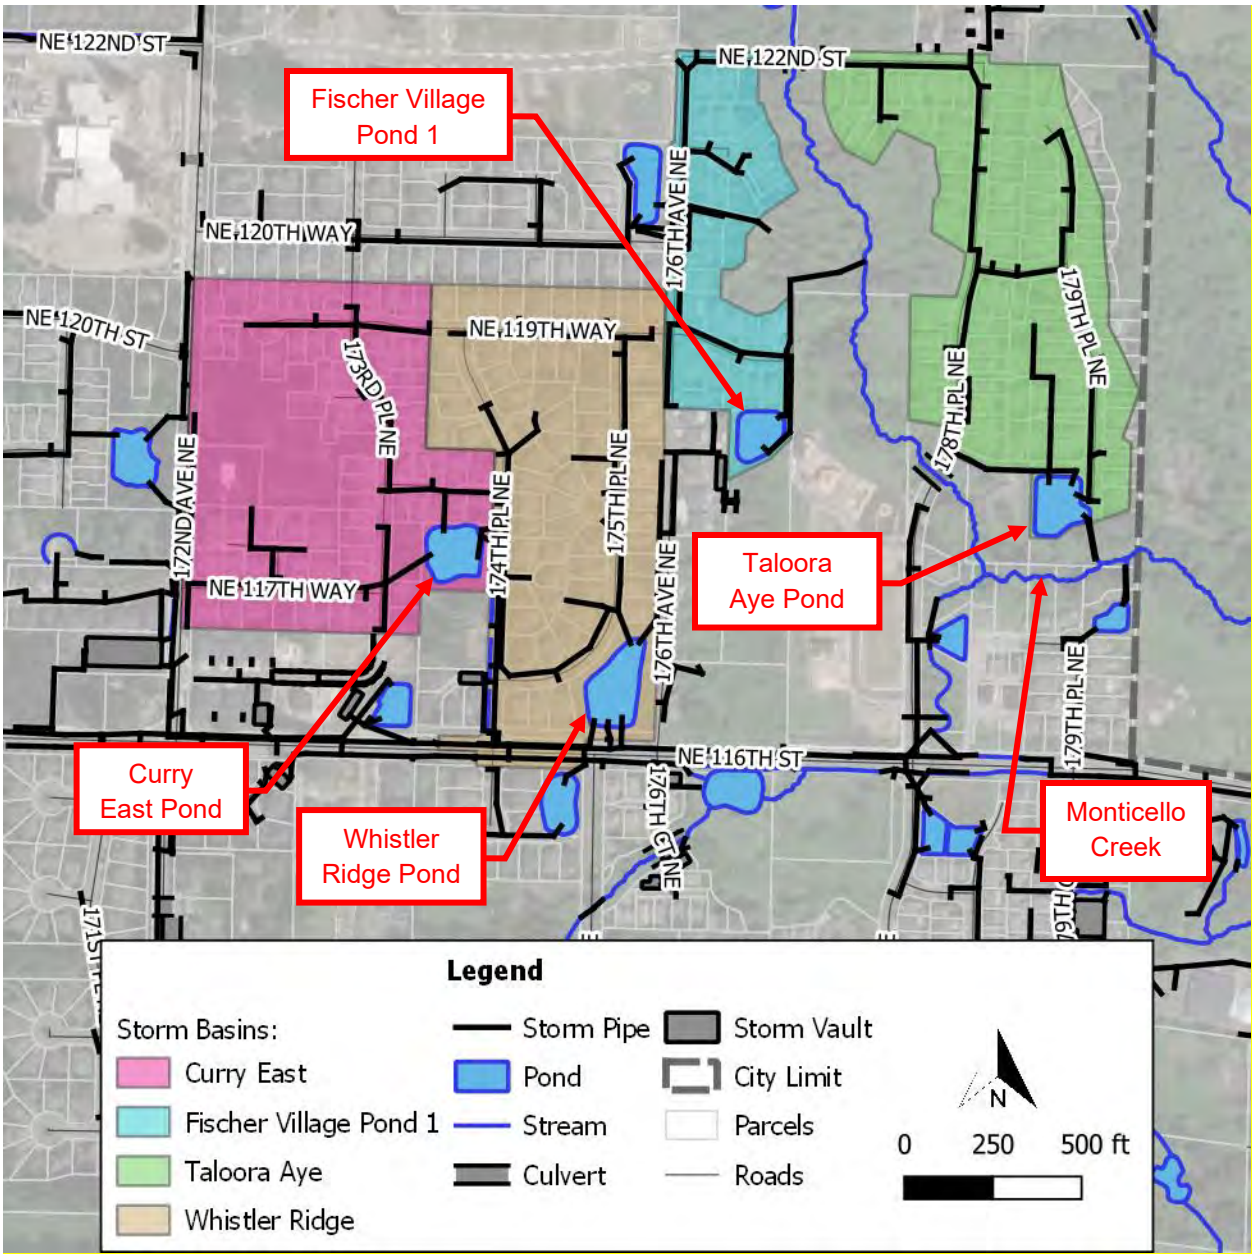

Figure 1 | Project Area Map

EXISTING CONDITIONS

The four stormwater ponds are located in north Redmond in residential subdivisions on the north side of NE 116th Street. All ponds are within approximately a quarter mile of each other. The ponds discharge to Monticello Creek either directly or through a storm drain system that conveys flow from west to east along NE 116th Street. According to record drawings, the ponds were constructed between 2001 and 2005. The ponds were intended to manage runoff from the residential developments also constructed at that time.

According to drainage reports, the ponds and control structures were designed to provide flow control using the Santa Barbara Urban Hydrograph (SBUH) method and sized to match pre-developed (forested) flows for 50 percent of the 2-year peak flow and the full peak flows for the 10-year and 100-year events.

This methodology aligned with the 1992 Ecology Stormwater Management Manual for the Puget Sound Basin, which was adopted by the City of Redmond at the time.

FEASIBILITY

Feasibility for retrofitting the ponds was determined by completing site visits to verify record drawings and determine whether adequate conditions exist for installing a CMAC retrofit. Site visits to each pond were completed by OCI on July 2, 2020. Each pond was inspected for the following elements:

- Accessibility for construction equipment
- Verification that outlet structures matched record drawings
- Adequate space for installation of CMAC system, including space for an actuator installed above the outlet structure and an electrical panel installed nearby
- Adequate space for a solar panel that would not be inhibited by excessive tree cover

Based on the criteria above, all four locations were determined to be feasible for installation of a CMAC system. The Whistler Ridge and Curry East ponds were noted to be enclosed in fenced areas, while the Taloora Aye and Fischer Village ponds were not fenced.

WWHM AND CMAC MODELING

Potential improvements from CMAC retrofits were investigated using the Western Washington Hydrology Model (WWHM) Version 4.2.17 and a spreadsheet tool provided by Opti that calculates the change in flow durations based on CMAC software logic expected to be employed at each site. For each pond, a model was first run in WWHM and then imported into the Opti spreadsheet. Modeling was completed according to guidelines in the Redmond Stormwater Technical Notebook.

WWHM hydrology parameters were taken from drainage reports that were available for each pond. Land cover in pre-developed conditions was assumed to be forest. For existing conditions, pervious areas were generally assumed to be lawn, except for several park areas and natural areas that were assumed to be forest based on heavy tree cover shown in aerial images. According to data from the USDA web soil survey, soils in the area consist of Alderwood gravelly sandy loam. This soil was modeled as Type C in WWHM. Slopes were determined using GIS contours and modeled using the flat slope category for all basins. Basin parameters are summarized in **Table 1**.

TABLE 1 | WWHM MODEL PARAMETERS

Pond	Basin Area (AC)	Impervious Area (AC)	Forest Area (AC)	Lawn Area (AC)	Percent Impervious	Slope Category
Whistler Ridge	16.91	9.97	0	6.94	59%	Flat
Curry East	17.03	9.12	1.97	5.93	53%	Flat
Taloora Aye	15.78	7.73	2.36	5.70	49%	Flat
Fischer Village	7.02	4.30	0	2.72	61%	Flat

For the existing conditions WWHM models, pond parameters were taken from record drawings and included pond dimensions, live storage volumes, and the sizes and depths of orifices and risers. To simplify the modeling, the dead storage volume below the pond outlet elevations was not modeled.

CMAC model parameters consisted of WWHM output data and parameters for guiding CMAC logic during the model simulation. WWHM parameters were taken from WWHM model output and included pre-

developed and existing conditions runoff timeseries, precipitation timeseries, and stage-storage curves for the ponds. The primary CMAC logic parameters were the depth and size of the proposed active orifices, target maximum stage during active control, and minimum desired flow to be released during the simulation. Orifices depth was set equal to the pond outlet to allow active control at all flow rates. The target maximum stage was set to the top of the overflow riser in the control structure. Minimum desired flow was set equal to or less than 50 percent of the 2-year peak flow based on the WWHM model, which was roughly half the minimum flow that the ponds were designed to release under the 1992 standards. This is the flow rate that will be targeted during times when the pond is releasing water after filing up during a storm event. The spreadsheet includes multiple other CMAC parameters related to logic decisions based on weather forecasting and were generally left at the default settings for this preliminary stage of design. These parameters will be fine-tuned during final design and the post-construction software optimization period, which will be performed by Opti.

TABLE 2 | OPTI SPREADSHEET PARAMETERS

Pond	Existing Control Structure and Inverts (ft NAVD88)	Active CMAC Orifice		Target Maximum Stage (ft)	Minimum Desired Flow (cfs)
		Diameter (in)	Proposed Valve Inverts (ft NAVD88)		
Whistler Ridge	1.70-in Orifice, 213.89 5.94-in Orifice, 220.46 8-in Orifice, 221.35	12	217.37	3.8	0.25
Curry East	2.94-in Orifice, 264.50 1.25-ft Notched Weir, 269.43	10	267.00	5.5	0.25
Taloora Aye	2.09-in Orifice, 182.93 1.48-ft Notched Weir, 188.93	12	184.38	5.0	0.10
Fischer Village	1.90-in Orifice, 203.51 2.20-ft Notched Weir, 206.45	10	203.71	6.0	0.23

COST/BENEFIT ANALYSIS

Costs for the retrofit projects were compared using hardware cost estimates provided by Opti. Because each retrofit location would have similar hardware components, the costs did not vary significantly between the pond locations. Costs were primarily estimated using equipment quotes provided by Opti. A 10 percent contingency was added for equipment costs, and a 30 percent contingency was added for construction costs. Planning level cost estimates are summarized in **Table 3** and attached included in Appendix A.

Benefits were assessed by comparing basin area managed, change in flow durations, and advantages and disadvantages of each site location. The basin area managed was greatest for the Whistler Ridge pond (16.91 acres) and the Curry East pond (17.03 acres). The Taloora Aye pond (15.78 acres) manages slightly less area, while the Fischer Village pond (7.02 acres) manages the smallest area.

Flow duration plots are included in Appendix B and indicate that flow durations improved in each pond with the CMAC retrofit. Current flow control in the Redmond Technical Notebook require flow control facilities for new or redevelopment projects to match pre-developed flow durations for 50 percent of the 2-year peak flow through the full 50-year peak flow (flow control standard) along with matching pre-developed durations for 8 percent of the 2-year flow through 50 percent of the 2-year flow (LID standard) if LID facilities are not used to the maximum extent feasible. Because the existing ponds were designed

under older standards and the volume of the ponds is not proposed to be increased with this retrofit, it was not possible to meet the current flow control standards. Flow durations were brought as close as possible to pre-developed durations by adjusting the active orifice sizes and CMAC control parameters.

The Whistler Ridge and Curry East ponds have the site advantages of being enclosed in gated areas, which could be useful in providing extra security for a CMAC system that includes a control panel and solar panel installed above ground. The costs and benefits for each pond are summarized in **Table 3**.

TABLE 3 | COST/BENEFIT SUMMARY

Pond	Planning Level Construction Cost with Contingency	Basin Area Managed by Retrofit (ac)	Site Advantages/ Disadvantages
Whistler Ridge	$103,422	16.91	Enclosed in gated area
Curry East	$105,388	17.03	Enclosed in gated area
Taloora Aye	$105,449	15.78	Not enclosed
Fischer Village	$103,634	7.02	Not enclosed

Note: Annual software licensing costs are not included in the construction cost estimates. For two ponds, annual software licensing costs are $27,600.

RECOMMENDATIONS

The Whistler Ridge pond and Curry East pond are recommended for moving forward with CMAC retrofits. These ponds have the advantages of managing the largest basin areas and being located in enclosed areas that will provide extra security.

Based on modeling results, both of these ponds are recommended to have a 12-inch orifice, which will require an IQT500 actuator assembly based on information provided by Opti. It is recommended that the City move forward with ordering the actuator assemblies so that construction can occur during fall 2020.

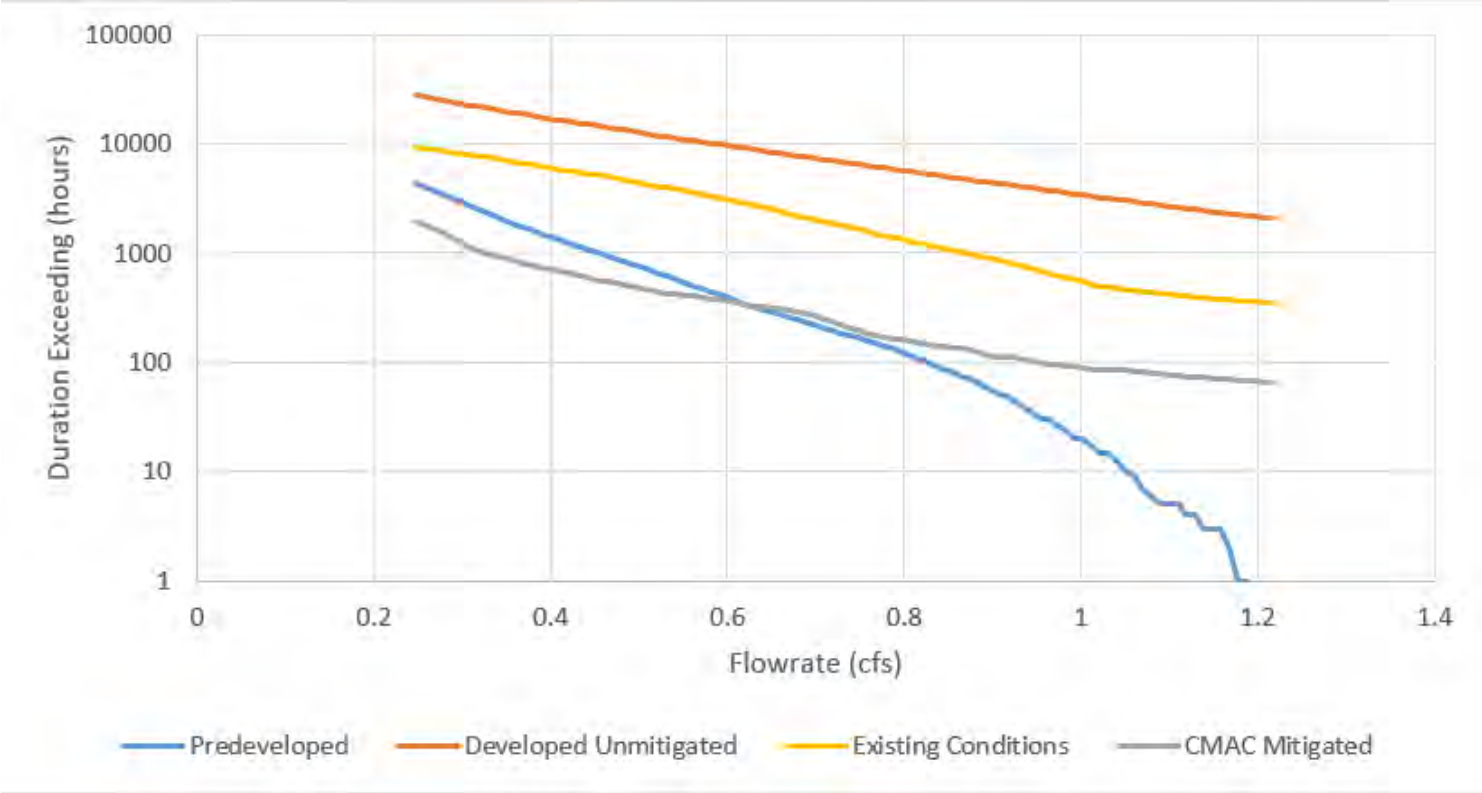
APPENDIX B: FLOW DURATION CURVES

City of Redmond
CMAC Retrofit Pilot Project
Flow Duration Plot
Whistler Ridge Pond



City of Redmond
CMAC Retrofit Pilot Project
Flow Duration Summary
Whistler Ridge Pond

Note: Flow durations were brought as close as possible to pre-developed durations by adjusting the active orifice sizes and CMAC control parameters. Passing conditions could not be achieved for all flow durations because of the volume of the existing ponds.

Flow(cfs)	Duration Exceeding Flowrate, hours				Percentage (Mitigated/ Predeveloped)	Pass/Fail	Percent Reduction from Existing Conditions
	Predeveloped	Developed Unmitigated	Existing Conditions	CMAC Mitigated

City of Redmond
CMAC Retrofit Pilot Project
Flow Duration Plot
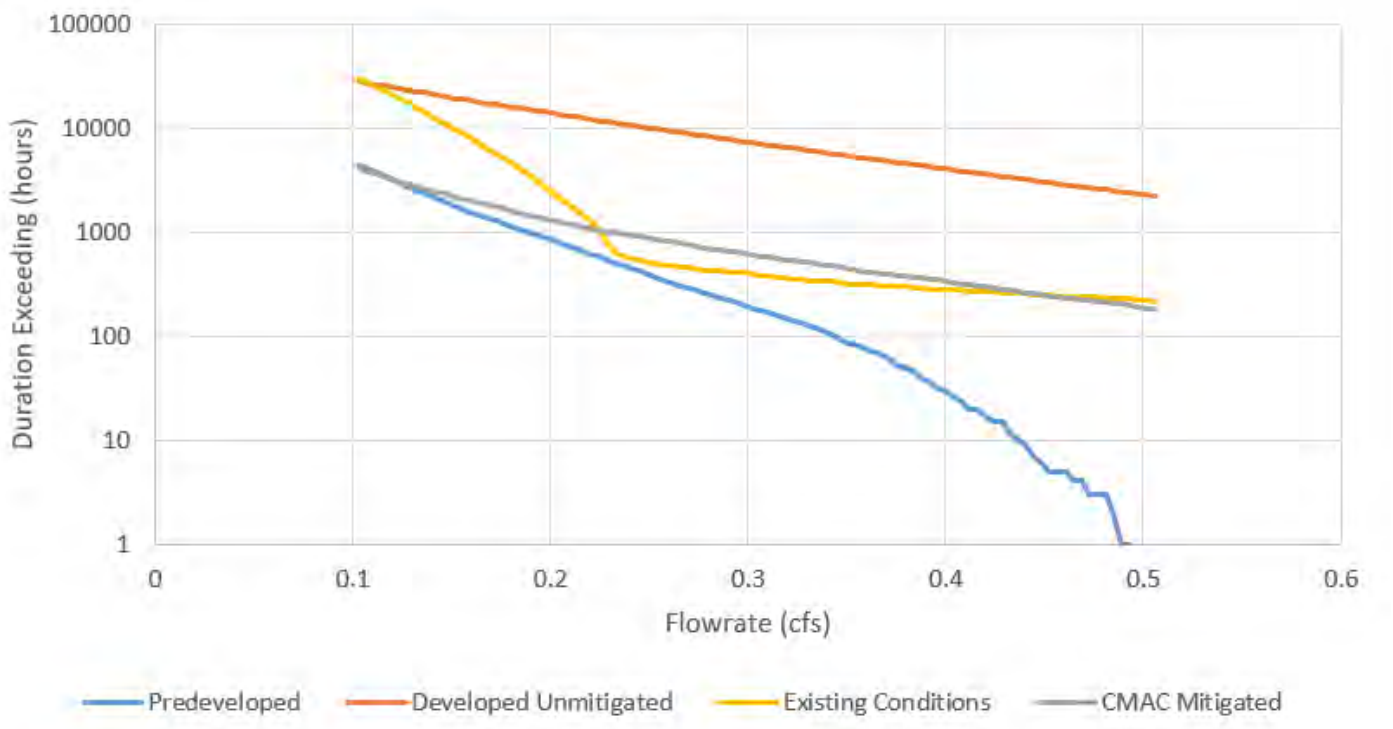
Fischer Village Pond 1



City of Redmond
CMAC Retrofit Pilot Project
Flow Duration Summary
Fischer Village Pond 1

Note: Flow Parameters were brought as close as possible to pre-developed durations by adjusting the active orifice sizes and CMAC control parameters. Passing conditions could not be achieved for all flow durations because of the volume of the existing ponds.

Flow(cfs)	Duration Exceeding Flowrate, hours				Percentage (Mitigated/ Predeveloped)	Pass/Fail	Percent Reduction from Existing Conditions
	Predeveloped	Developed Unmitigated	Existing Conditions	CMAC Mitigated

Job Number 6918 Sheet 23 of 58

A PORTION OF THE SE 1/4 OF SECTION 25, TOWNSHIP 26 N., RANGE 5 E., W.M.
CITY OF REDMOND, KING COUNTY, WASHINGTON

NOTE: THE DEVELOPMENT SHALL BE CONSTRUCTED WITH THE CITY OF REDMOND YEAR 2000 STANDARD SPECIFICATIONS AND DETAILS.

COMPACTED TILL LINERS:

1. LINER THICKNESS SHALL BE 18 INCHES AFTER COMPACTION.
2. SOIL SHALL BE COMPACTED TO 95% MINIMUM DRY DENSITY, MODIFIED PROCTOR METHOD (ASTM-1557).
3. A DIFFERENT DEPTH AND DENSITY SUFFICIENT TO RETARD THE INFILTRATION RATE TO $2.4x10^{-5}$ INCHES PER MINUTE ($1x10^{-6}$ cm/s) MAY ALSO BE USED IN LIEU OF CRITERIA 1 AND 2.
4. SOILS SHOULD BE PLACED IN 6 INCH LIFTS
5. SOILS MAY BE USED THAT MEET THE FOLLOWING GRADATION:

SIEVE SIZE	PERCENT PASSING
6 INCH	100
4 INCH	90
#4	70–100
#200	20–100

NOTE:

1. ALL EARTHWORK, GRADING AND RETAINING WALLS SHALL BE CONSTRUCTED IN ACCORDANCE WITH EARTH CONSULTANTS, INC. GEOTECHNICAL REPORT DATED SEPTEMBER 17, 2001 AND ANY SUBSEQUENT REPORTS AND FIELD DIRECTION. CONTRACTOR SHALL OBTAIN APPLICABLE REPORTS AND KEEP ON SITE WITH THE APPROVED PLANS.

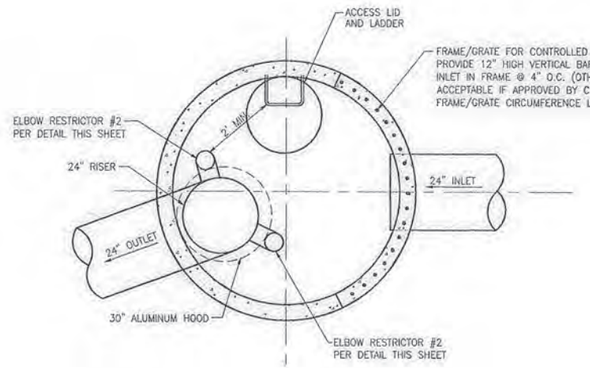
GEOMEMBRANE LINERS:

1. GEOMEMBRANE LINERS SHALL BE UV RESISTANT AND HAVE A MINIMUM THICKNESS OF 30 mils A THICKNESS OF 40 mils SHALL BE USED IN ARES OF MAINTENANCE ACCESS OR WHERE HEAVY MACHINERY MUST BE OPERATED OVER THE MEMBRANE.
2. GEOMEMBRANES SHALL BE BEDDED ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS.
3. LINERS SHALL BE INSTALLED SO THAT THEY CAN BE COVERED WITH 12 INCHES OF TOP DRESSING FORMING THE BOTTOM AND SIDES OF THE WATER QUALITY FACILITY. TOP DRESSING SHALL CONSIST OF 6 INCHES OF CRUSHED ROCK COVERED WITH 6 INCHES OF NATIVE SOIL. THE ROCK LAYER IS TO MARK THE LOCATION OF THE LINER FOR THE FUTURE MAINTENAINCE OPERATIONS. AS AN ALTERNATIVE TO CRUSHED ROCK, 12 INCHES OF NATIVE SOIL MAY BE USED IF ORANGE PLASTIC "SAFETYT FENCING" OR ANOTHER HIGHLY-VISIBLE, CONTINUOUS MARKER IS EMBEDDED 6 INCHES ABOVE THE MEMBRANE.
4. IF POSSIBLE, LINERS SHOULD BE OF A CONTRASTING COLOR SO THAT MAINTENANCE WORKERS ARE AWARE OF ANY AREAS WHERE A LINER MAY HAVE BECOME EXPOSED WHEN MAINTAINING THE FACILITY.
5. GEOMEMBRANE LINERS SHALL NOT BE USED ON SLOPES STEEPER THAN 5H:1V TO PREVENT THE TOP DRESSING MATERIAL FROM SLIPPING. TEXTURED LINERS MAY BE USED ON SLOPES UP TO 3H:1V UPON ECOMMENDATION BY A GEOTECHNICAL ENGINEER THAT THE TOP DRESSING WILL BE STABLE FOR ALL SITE CONDITIONS, INCLUDING MAINTENANCE.

TOPSOIL OVER LINER SPECIFICATION:

PER. KCSWDM (SECTION 6.2.4, PAGE 6-22)

WHERE GRASS MUST BE PLANTED OVER A LOW PERMEABILITY LINER PER THE FACILITY DESIGN, A MINIMUM OF 6 INCHES OF GOOD TOPSOIL OR COMPOST-AMENDED NATIVE SOIL (2 INCHES COMPOST TILLED INTO 6 INCHES OF NATIVE SOIL) MUST BE PLACED OVER THE LINER IN THE AREA TO BE PLANTED. TWELVE INCHES IS PREFERRED.

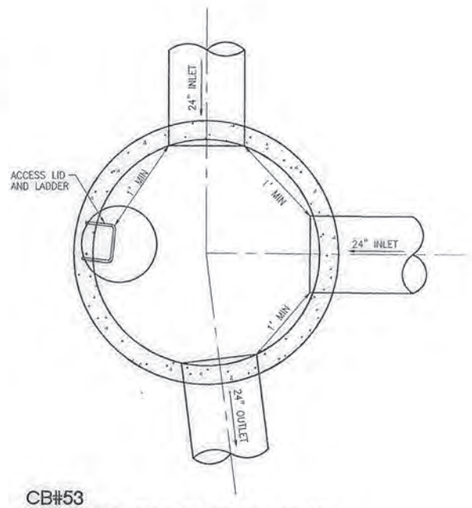


CB#55, TYPE 2-72"
DETENTION SYSTEM CONTROL STRUCTURE (PLAN VIEW)

SCALE:1"=2' DESIGN PER C.O.R. STD. #610

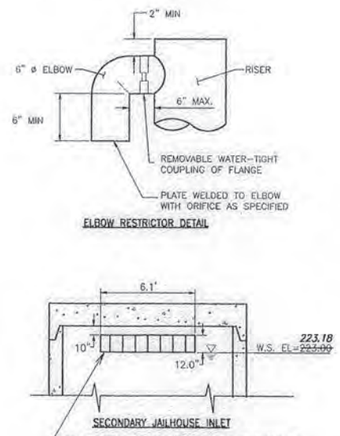
INFORMATION PLATE:
A BRASS OR STAINLESS STEEL PLATE SHALL BE PERMANENTLY ATTACHED INSIDE EACH CONTROL STRUCTURE. ENGRAVED INFORMATION ON THE PLAT SHALL INCLUDE THE FOLLOWING:

NAME AND FILE NUMBER OF PROJECT
NAME AND COMPANY OF (1) DEVELOPER, (2) ENGINEER, AND (3) CONTRACTOR
DATE CONSTRUCTED
DAT OF MANUAL USED FOR DESIGN
OUTFLOW PERFORMANCE CRITERIA
RELEASE MECHANISM SIZE, TYPE, AND INVERT ELEVATION
LIST OF STAGE, DISCHARGE, AND VOLUME AT ONE-FOOT INCREMENTS
ELEVATION OF OVERFLOW
RECOMMENDED FREQUENCY OF MAINTENANCE



CB#53
TYPE 2-72" CATCH BASIN - PLAN

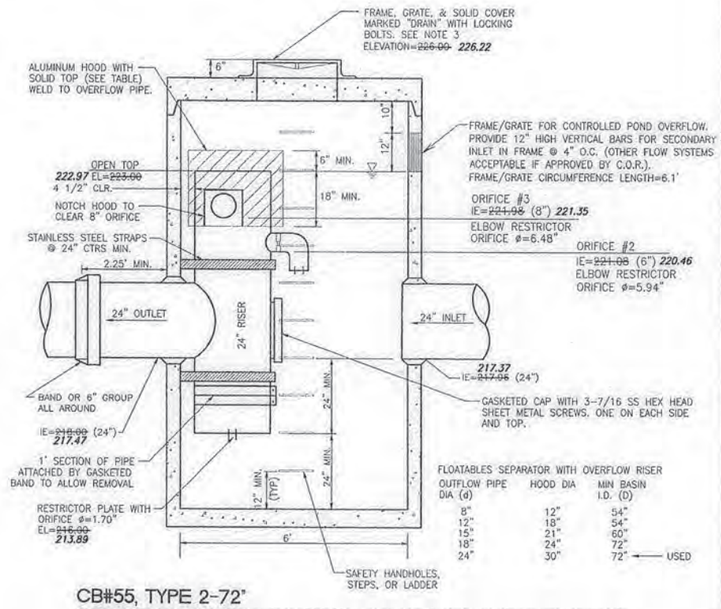
SCALE: 1"=2'



ELBOW RESTRICTOR DETAIL

SECONDARY JAILHOUSE INLET

FRAME/GRATE FOR CONTROLLED POND OVERFLOW. PROVIDE 12" HIGH VERTICAL BARS FOR SECONDARY INLET IN FRAME @ 4" O.C. (OTHER FLOW SYSTEMS ACCEPTABLE IF APPROVED BY C.O.R.). FRAME/GRATE CIRCUMFERENCE LENGTH=6.1'

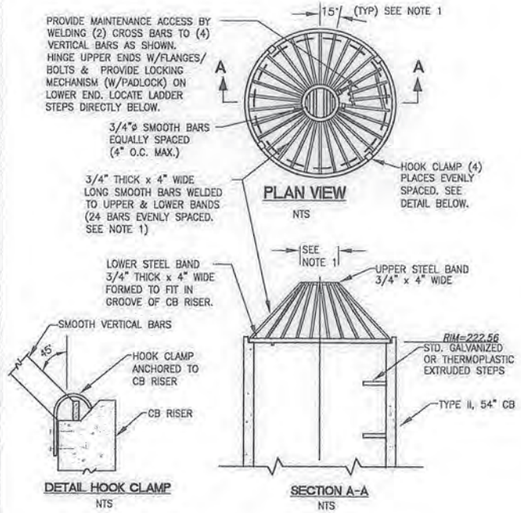


FLOATABLES SEPARATOR WITH OVERFLOW RISER

OUTFLOW PIPE DIA (d)	HOOD DIA	MIN BASIN I.D. (D)
8"	12"	54"
12"	18"	54"
15"	21"	60"
18"	24"	72"
24"	30"	72" ← USED

CB#55, TYPE 2-72"
DETENTION SYSTEM CONTROL STRUCTURE (SECTION VIEW)

SCALE:1"=2' DESIGN PER C.O.R. STD. #610



NOTES:
1. DIMENSIONS ARE FOR INSTALLATION ON 54"ø CB. FOR DIFFERENT DIA. CB'S ADJUST DIMENSIONS TO MAINTAIN 45° ANGLE ON "VERTICAL" BARS & 4" O.C. MAX. SPACING OF BARS AROUND LOWER STEEL BAND. WHEN VERTICAL BAR SPACING EXCEEDS 4" O.C., PROVIDE HORIZONYAL RINGS 4" O.C.
2. METAL PARTS: CORROSION RESISTANT (STEEL PARTS GALVANIZED OR STAINLESS STEEL).
3. THIS DEBRIS BARRIER IS ALSO RECOMMENDED FOR USE ON THE INLET TO ROADWAY CROSS-CULVERTS WITH HIGH POTENTIAL FOR DEBRIS COLLECTION (EXCEPT ON CLASS 2 STREAMS).

BIRDCAGE OVERFLOW STRUCTURE
CB#54, TYPE 2-54"

NOT TO SCALE

ROCK PROTECTION AT OUTFALLS

DISCHARGE VELOCITY AT DESIGN FLOWS (fps)		REQUIRED PROTECTION				
		MINIMUM DIMENSIONS				
GREATER THAN	LESS THAN OR EQUAL TO	TYPE	THICKNESS	WIDTH	LENGTH	HEIGHT
0	5	ROCK LINING*	1 ft.	DIAMETER + 6 ft.	8 ft. OR 4X dia., WHICHEVER IS GREATER	CROWN + 1 ft.
6	10	RIP RAP**	2 ft.	DIAMETER + 6 ft. OR 3X dia., WHICHEVER IS GREATER	12 ft. OR 4X dia., WHICHEVER IS GREATER	CROWN + 1 ft.
11	20	GABION OUTFALL	AS REQUIRED	AS REQUIRED	AS REQUIRED	CROWN + 1 ft.
20	N/A	ENGINEERED ENERGY DISSIPATOR REQUIRED				

* ROCK LINING SHALL BE IN ACCORDANCE WITH SECTION 9-13.1 OF THE WSDOT/APWA STANDARD SPECIFICATIONS. RIP RAP TO BE REASONABLY WELL GRADED WITH ROCK GRADATION AS FOLLOWS:
PASSING 8" SQUARE SIEVE 100%
PASSING 3" SQUARE SIEVE 40-60%
PASSING 3/4" SQUARE SIEVE 0-10%

** RIP RAP TO BE REASONABLY WELL GRADED WITH ROCK GRADATION AS FOLLOWS:
MAXIMUM STONE SIZE 24" (NOMINAL DIAMETER)
MEDIUM STONE SIZE 16"
MINIMUM STONE SIZE 4"

NOTE: [illegible] COVERED BY SHEET [illegible] OUTLET CHANNEL ASSUMED TO BE 3:1

CB NOTES:
1. EXCEPT AS SHOWN OR NOTED, UNITS SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE REQUIREMENTS FOR CATCH BASIN TYPE 2-60" MIN. DIAMETER
2. OUTLET CAPACITY: 100 YEAR DEVELOPED PEAK FLOW
3. METAL PARTS: CORROSION RESISTANT. NON-GALVANIZED PARTS PREFERRED. GALVANIZED PIPE PARTS TO HAVE ASPHALT TREATMENT 1.
4. FRAME & LADDER OR STEPS OFFSET SO:
   A) CLIMBDOWN SPACE IS CLEAR OF RISER AND CLEANOUT GATE.
   B) FRAME IS CLEAR OF CURB
5. IF METAL OUTLET PIPE CONNECTS TO CEMENT CONCRETE PIPE: OUTLET PIPE TO HAVE SMOOTH O.D. EQUAL TO CONCRETE PIPE I.D. LESS 1/4".
6. THE RESTRICTOR/SEPARATOR SHALL BE FABRICATED FROM 0.060" ALUMINUM, OR 0.064" ALUMINIZED STEEL, OR 0.064" GALVANIZED STEEL PIPE IN ACCORDANCE WITH AASHTO M 36, M 196, M 197 AND M 274. GALVANIZED STEEL SHALL HAVE ASPHALT TREATMENT 1.
7. LOCATE ELBOW RESTRICTORS TO PROVIDE MINIMUM CLEARANCE AS SHOWN
8. OUTLET SHALL BE CONNECTED TO CULVERT OR SEWER PIPE WITH A STANDARD COUPLING BAND FOR CORRUGATED METAL PIPE, OR GROUTED INTO THE BELL OF CONCRETE PIPE.
9. THE VERTICAL RISER STEM OF THE RESTRICTOR/SEPARATOR SHALL BE THE SAME DIAMETER AS THE HORIZONTAL OUTLET PIPE.

CONTENTS

WAIVED CONDITIONS

WAIVED CONDITIONS:

PROJECT: Curry PRD
JOB NO.: 53-269-41

The following issues discovered and/or resolved during our review that were waived or clarified by City staff:

Use Catch basin sediment trap such as Siltsack Layfield Sediment Trap or approved "equal". "Equal" shall have capacity to allow overflow if sediment clogs fabric. (Jeff Dendy)

REVIEW SUMMARY

REVIEW SUMMARY:

PROJECT: **Curry P.R.D.**
JOB NO.: 53-269-41

The following is a summary of the major items that were required to be addressed after each review submittal:

Submittal 1 (8/15/03)

General information

List site area in square feet and acres.
Correct typo's where noted.
Reference COR Standards.

TESC

Show trees to remain with designated dripline and protective fencing shown 5 ft outside of driplines.
Interceptor swale must be Min. 1 ft deep per COR #504.
Show inlet protection on existing CB's adjacent to the site. Do not show on proposed except for any specifically needed for the TESC plan.
Do not show proposed features on TESC plan.
Show construction access routes.
Show all existing utilities.
Add filter fencing where indicated.
Add note: "This TESC applies to the dry season only."
Make line types consistent between plans and legend.
Where does swale on C2.03 go? Not shown on C2.04.
Provide profile through TESC pond.
Galvanized materials are not allowed in storm ponds in Redmond.
Use updated TESC notes.

Grading

Provide a handrail on top of rockery since there is an 8 ft drop into pond.
Rockeries over 4 ft require geotech recommendation/structural design.

Road & Storm Drainage Plan/Profile

Reference COR # 607 for Type I and COR # 609 for Type II CB's.
All grates are required to be vaned unless solid.
Thru curb inlets are required on every 3rd inlet and on sag curves.
Include note that tracer wire will be included on roof drains.
Include all symbols in legend.
Include cleanouts where indicated.
Add Matchlines where indicated.

In the orientation shown, will the structural integrity of CB #24 be maintained with an 18", 15", 12", and 6" pipe into a 48" Type II?
Plans on C4.02 rotated 180° from the key map
Show matching crowns in profile.
Show pipes in correct locations in profile.
Maximum of 3 lot drains per collection pipe.
Rotate key map so that North is up, for clarity.
Pipe leading into CB 32 is skewed from center of MH.
Should have spot elevations on ¼ points for approach on curbs (Typ)
Curb radius for arterial streets is 25 ft.
5 ft horizontal clearance needed between utilities.
Correct scale on profile where indicated.
Provide trash rack on pipe on C4.08.
20' x 100' site triangle needed for arterials.

Details

Bollards should be called out per COR Std #890 and not shown in detail.
Rip Rap should be called out per COR Std. #620 and not shown in detail.
Specify aluminum for all CMP.
3:1 max slope above permanent water surface elevation. 2:1 only allowed in dead storage area
Specify wetlands planting mix per DOE requirements for plant benches.
18" thick layer of compacted topsoil above pond liner required.
List all design storms on pond profile or show in storm report.
Show all pipes entering and leaving pond profiles.
Weir length shown in storm report (1.15 ft) is what should be shown in detail

Drainage Report

Provide sub-basin areas on sub-basin map.
Provide 100-yr overflow map assuming CB's are plugged. Runoff must not impact buildings.
Preliminary plat plan included in report is not current.
Correct typo's where indicated.
Explain the bypass area in more detail.
Include SCS soils types chart with appropriate curve numbers added.
Explain composite curve # in text on previous page.
What does weir height refer to?
Include flow from Cogan-Allen to CB 42 in conveyance calcs.

Submittal 2 (12/30/03)

General information

Correct typo's where noted.
Reference COR Standards.

TESC

Show trees to remain with designated dripline and protective fencing shown 5 ft outside of driplines.
Galvanized materials are not allowed in control structures in Redmond.

Grading

Rockery detail must comply with COR Std. #909.

Road & Storm Drainage Plan/Profile

All roof drain stubs should cross sidewalks/ landscape strips as close to 90^{o} as possible.
Show correct area for C4.08 on Key map.
Show box areas for C4.01-02 in Key map on C4.09.
Show 18" pipe to the south on CB 3.
Show matching crowns in profile.
5 ft horizontal clearance needed between utilities.

Details

Correct Storm and Grading Notes as indicated.
Galvanized materials not allowed in COR.
Show and label correct slope on pond. 3:1 and 2:1 shown for same slope.
Lower control structure inlet to provide slope in upstream pipe.

Drainage Report

Provide statement about downstream bypass line capacity to accommodate Curry.
Bypass areas are usually treated as a separate sub-basin. Please explain methodology more thoroughly.
Correct typo's where indicated.
Provide information to state that the 1.49 acres of Cogan-Allen will not be developed beyond one residential lot.
Waterworks printout and pond volume calcs sheet are not consistent.
The property draining to CB 37 should be based upon developed conditions to assure proper conveyance capacity.
Explore routing the swale for CB 35 between Lots 60 and 61. Need to provide assurance that swale will be maintained in working condition.
A map showing flow routes assuming all catch basins are plugged is required for all developments in the City of Redmond.
Conveyance pipes should not surcharge in the 10-yr condition.
Cogan-Allen flows should be added in at CB 42.

Submittal 3 (02/13/04)

General information

Correct typo's where noted.
Reference COR Standards.

TESC

Show trees to remain with designated dripline and protective fencing shown 5 ft outside of driplines.
Galvanized materials are not allowed in control structures in Redmond.
Use Catch basin sediment trap such as Siltsack Layfield Sediment Trap or approved equal. Equal will have capacity to allow overflow if sediment clogs fabric. (Jeff Dendy)

Grading

Rockery detail must comply with COR Std. #909.

Road & Storm Drainage Plan/Profile

All roof drain stubs should cross sidewalks/ landscape strips as close to 90^{o} as possible.
Show correct area for C4.08 on Key map.
Show box areas for C4.01-02 in Key map on C4.09.
Show 18" pipe to the south on CB 3.
Show matching crowns in profile.
5 ft horizontal clearance needed between utilities.

Details

Correct Storm and Grading Notes as indicated.
Galvanized materials not allowed in COR.
Show and label correct slope on pond. 3:1 and 2:1 shown for same slope.
Lower control structure inlet to provide slope in upstream pipe.

Drainage Report

Correct typo's where indicated.

REDMOND COMMUNITY DEVELOPMENT GUIDE

Plans shall conform to Section 20E.90.10-080 of Redmond Community Development Guide. The general headings listed below must be addressed.

__/__/__Erosion and Sediment Control
__/__/__Drainage Facilities
__/__/__Water Quality Control
__/__/__Water Quantity Control
__/__/__Stabilization of Disturbed Areas
__/__/__Protection of Adjacent Properties
__/__/__Maintenance
__/__/__Identification of Sensitive Areas and Associated Buffers
__/__/__Identification of Easements
__/__/__Accurate Description of Work Area
__/__/__Control of Pollutants Other Than Sediment on Construction Sites
__/__/__Source Control of Pollution
__/__/__Controlling Off-Site Erosion
__/__/__Other BMPs
__/__/__Separate Public and Private Drainage
__/__/__Limited Topographic Change
__/__/__Tree Preservation Plan

DRAWING FORMAT AND CONTENT

- NORTH ARROW AT TOP OR LEFT EDGE OF DRAWING

Plans shall conform with the standards in this Stormwater Notebook.

C+ /__ Construction Drawing Size - 22" x 34".

Include Note: "This Development Shall Be Constructed with the
C/__ City of Redmond Year 2000 Standard Specifications and Details"

I/C/__ Drawing Content - shall contain all information necessary to review the design and to construct the improvements.

C/__/__ Title Block/Drawing Title
- C/__/__ Issue or Revision Date
- C/__/__ Section, Township and Range.
- C/__/__ Project Name & Phase
- C/__/__ Tax Parcel/Plat Number
- C/__/__ Legal Description
- C/__/__ Engineer Information - name, address, phone and contact.
- C/__/__ Owner Information - name, address, phone and contact.

C/__/__ Vicinity Map - showing the general location of the project.

C/__/__ City Approval Block - must be on every sheet at lower right hand corner.

C/__/__ Horizontal Scale - 1"=20'.

C/__/__ Vertical Scale - 1"=5'.

C/__/__ Vertical Datum - minimum of two (2) C.O.R. datum must be shown.

C/__/__ Horizontal Datum - minimum of two (2) C.O.R. datum and NAD 83-91 coordinates on two (2) minimum points at exterior lot/boundary corners must be shown..

C/__/__ North Arrow & Scale Bar - shown in the upper left hand corner of the drawings

C/__/__ Drawing Layout - shall be laid out to afford the maximum understanding possible.

C/__/__ Profiles of Storm Drainage Systems - required for public drainage systems and may be required for private systems where conflicts with other utilities are possible.

I/C/__ Profile Information - include existing and proposed grade, all utility crossings and crossings clearances, pipe slope, pipe size, pipe length, pipe material, manhole depths, inverts, etc.

C/__/__ Plan View Information - shall indicate and identify all existing and proposed features, utilities, street improvements and paving, and other features that will affect the design and construction of the site grading and the drainage system.

C/__/__ Engineer Stamp and Signed and Dated Consistently with Issued or Revised Date - drawings shall be stamped before submittal and review by the City.

I/C/__ Legend - identify line types and symbols used.

C/__/__ Property Data - shall include property lines with bearings and distances, right-of-way lines, parcel numbers, lot numbers, plat names, and street names.

__/__/__ Phased Project Drawings - depict all construction necessary to complete the phase (each phase shall be independently approved).

C/__/__ Standard Notes (see Appendix A-3).

CITY GENERAL NOTES

MINIMUM DESIGN REQUIREMENTS, CLEARING, GRADING & TESC

Plans shall conform to the **Minimum Design Requirements** identified in the Stormwater Notebook.

NO LOW SPOTS

I/C/__ Fully Identify Work - clearing and grading limits shown, with stockpile/staging areas and sequence of construction.

I/I/C Disturbed Area - in acres must be shown on the Clearing and Grading plans.

C/__/__ Limits of Clearing - fenced with 42" orange safety fence or approved filter fence.

C / _ Trees to Remain - shall be shown with the dripline designated (must have protective fencing at five (5) feet beyond the dripline if adjacent to cleared areas) - no grading or filling permitted within the dripline. Show pertinent information within 50' of clearing.

C / _ Buffer Strips of Sensitive Areas.

~~N/A~~ / _ ~~Steep Slope Setback~~

C / _ Grades - show existing and proposed contours. MAX 3:1. 2:1 MAY BE OKAY AT ROAD

C / _ Cut/Fill - shall not exceed 8 ft.

~~N/A~~ / _ ~~Stabilization of Disturbed Areas.~~

I / C _ Stockpile location and ground slopes.

I / I / C Estimate of Earthwork Quantities.

~~N/A~~ / _ ~~Timing and Stabilization of Sediment Trapping Measures.~~

C / _ Silt Fence [COR Std 502] (no straw bale permitted - must use silt fence).

C / _ Construction Entrance [COR Std 503]. 1 ONLY IF POSSIBLE

~~N/A~~ / _ ~~Clean Water Diversion~~ - areas onsite and offsite that are not disturbed must be diverted away from disturbed areas.

~~N/A~~ / _ ~~Dewatering Construction Sites~~ – show sediment traps.

~~N/A~~ / _ ~~Stabilization of Temporary Conveyance Channels and Outlets~~ – no erosion for 10 year, 24-hour storm.

C / _ Storm Drain Inlet Protection – inlet protection must be provided for all storm drain inlets within the construction vicinity.

I / ~~I~~ C Temporary Swales and/or Trenches - show shape, dimensions, spot elevations every 50 feet, drainage area, channel stabilization treatment type and computations of flow and velocity (cannot exceed 4 fps without rip-rap lining) [COR Std 504].

C / _ Check Dams - show detail, dimensions and quantity of rock protection. No straw bales allowed.

C / _ Temporary Culverts - show drainage area, 1 ft minimum cover, type of pipe, length and diameter, and slope.

C / _ Temporary Sediment Pond(s) - show size, bottom elevation, top elevation, cleanout elevation, outlet protection, drainage area, volume required, volume provided, cross-section through the dam, profile through the pond, spillway and consistent with calculations. Not allowed near future infiltration sites.

C / _ Rip-rap Outlet Protection - show size of stone, quantity and stabilization fabric under stone [COR Std 620].

_ / _ Maximum open trench length = 300'.

_ / _ TESC performance bond posted.

C / _ Construction Access Routes.

C / _ Removal of Temporary BMPs.

~~N/A~~ / _ ~~Preservation of Natural Drainage Systems.~~

~~I~~ / C _ Sequence of Construction - describe how construction will proceed in order to limit erosion, include phasing if appropriate

~~I~~ / C _ Standard Notes (see Appendix A-3).

I / C / _ Include Note "This T.E.S.C. Plan applies to the dry season only."

SITE PLAN (All Proposed Information Must be Distinguished From Existing Information)

C/__/__Property Lines - including bearings and distances.
C/__/__Right of Way - including bearings and distances.
C/__/__Lot Numbers.
C/__/__Site Area - shown in square feet and acres.
C/__/__Streets - edge of pavement or curb and sidewalk, centerline, and name shown.
C/__/__Contours - (dashed lines for existing and solid lines for proposed) 1 or 2 foot interval (slopes 40% or greater may be shown with 5 foot contours).
C/__/__Onsite Features - easements, buffers, +40% slopes, etc.
C/__/__Offsite Information - all features within offsite areas that drain onsite, and all information within 20 feet of all property lines.
C/__/__Utilities (water, sewer, telephone, cable television, gas, power, etc.).
C/__/__All Utilities Easements Shown with Dimensions Labeled.
__/__/__Setbacks
__/__/__Building
__/__/__Steep Slope (in accordance with geo-technical recommendations).

- / / Drainage Calculation Results _____

QUANTITY CONTROL

C / / Release Rate(s) [half of pre 2 yr. for post 2 yr., pre 10 yr. for post 10 yr. and pre 100 yr. for 100 yr.; riser rate of 0.2187 ft/min.; Tech. Ltr.]
C / / Storage Volume Required 72,392
C / / Storage Volume Provided 72,392
/ / Control Structure(s)
/ / Quantity Control Facilities

QUALITY CONTROL

C / / Water Quality Volume Required (6 month - 24 hr.) _____
/ / Treatment Volume Provided _____
/ / Control Structure(s)
/ / Quality Control Facilities

CONVEYANCE SYSTEM

C / / Storm Drain Computations - rational method (KCSWM Manual) for pipe sizing, include: "C" factor determination, time of concentration determination and flow calculations.
C / / Design Slope - 0.25% minimum and 20% maximum.

I/C/ Hydraulic Grade Line Computations – hgl for 10 Year must be 1' below overflow condition (allowances may be made near detention system or large bodies of water surcharge).

I/I/ Downstream Analysis - provide storm drain computations and hydraulic grade line computations for existing storm drainage systems which are being revised by changes to the drainage area or system expansion.

I/C/ Safe 100 Year Flow Conveyance - the provision of the 100 year storm flow shall not impact any buildings.

I/C/ Information presented in the calculations is consistent with plan.

STORMWATER MANAGEMENT PLAN

PLAN REVIEW

C/ / Minimum Pipe Size - 8" minimum for public storm drain systems and 6" minimum for private systems.

C/ / Pipe Data - pipe size, length, slope, and material labeled.

I/I/C Horizontal Clearance - 5 feet from all other utilities and structures, and 8 feet from trees (street trees may be closer than 8' with root barrier).

I/C/ Vertical Clearance - one foot from other utilities. 18" for sewer with storm above sewer.

C/ / Rockeries/Retaining Walls - shall not cross or be near storm drain pipes. Exceptions shall only be approved where no alternatives exist. Any crossing of a wall shall be perpendicular to the wall and special construction techniques including steel casings may be required. No rockeries allowed over roof or footing drains

C/ / Structure Data - structure number, structure type and/or size, type of cover, rim elevation, and all pipe inverts labeled.

C/ / Structure Spacing - 350' preferred (400' may be allowed).

C/ / Easements – shown with dimensions labeled. 20' minimum width. No obstructions allowed in easements.

C/ / Drains Behind Sidewalk - required in all cut situations and at the base of slopes.

I/C/ Cleanouts Spacing - to be at bends, end of lines and at 100 ft o.c. (required in all cut situations and at the base of slopes).

C/ / Cleanouts Specifications - shall be specified with Carson boxes or equal with ungasketted caps in soft area and traffic bearing in paved areas [COR Std 621].

C/ / Footing/Foundation Drains - including pipe size, material, and cleanouts shall be connected to the storm drain system (shown as stubbed to lots only for plats).

I/C/ Roof Drains - including pipe size, material, and cleanouts shall be connected to the stormdrain system (shown as stubbed to lots only for plats). 6" minimum.

I/C/ Footing/Foundation Drains and Roof Drains - shall be connected at a structure only (private onsite structure or at the street).

C/ / 3 ft. Paved Area - around roof drain cleanout or catch basin Type 1A required.

I/C/ Tracer Wire – must be shown on roof drains from the building to the property line.

I/C/ CMP should be called out as corrugated aluminum pipe.

C/ / Provide vehicular access to all CBs

C/ / Outfall Protection - sized for 10 year storm (unless otherwise specified by SWM Div.); provide: type, size dimensions and quantity of stone. Stone must be laid on approved filter fabric. Maximum allowable discharge velocity to rock outlet is 10 fps without special design [COR Std 620].

PROFILES (Required for Public System)

C / / Profile - pipes and structures.
I / / Other Utilities - labeled and designate size and type.
C / / Profile grades - show and label existing and proposed grades.
C / / Pipe Cover - 18 inches minimum. (OR USE D1)
C / / Pipe Profile Information - show invert and top of pipe, pipe size, pipe material, and design slope.
N/A / / Drop structures only allowed per approval of Stormwater Engineer.
C / / Grates: - through-curb inlets at sag curves, possible bypass points and every third inlet; Vaned Grates ~~on Slopes > 5%; Herringbone otherwise~~. required unless solid or thru-curb.
I/C / Utility Crossings - all crossings must be shown, label utility type, line size, invert of utility and storm lines and clearance between pipes (1 foot minimum vertical clearance and 30 degrees minimum crossing angle).
C / / Structure Profile Information - label type of structure, structure number, size, and pipe inverts.
I/C Berm Section - in accordance with geo-technical recommendation for open ponds.
C / / Public Storm Structure – with four feet (4') or greater from the top to the invert must be Type II catch basin. 5' for private structure. See Standard detail 608
N / / Type III catch basin required for structures with bottoms between 12' and 25'. See Standard Detail 615.

STORMWATER MANAGEMENT FACILITIES

UNDERGROUND DETENTION

N/A Runoff Determination - per DOE Manual, for the design storms as established by the Technical Committee review.
/ / Area Draining to SWM System, Bypass and Compensation Areas.
/ / Offsite Areas Draining on Site - generally do not need to be controlled but, must be safely conveyed.
/ / Detention Volume Computation - show volume required and volume provided. Stage/storage curve must match proposed facility.
/ / Controlling Orifice Computation - plans and computation must match.
/ / Control Structure - designed and detailed (plan view and cross section required) shall conform to COR Std 610 or equivalent.
/ / Profile of Detention Pipe or Vault.
/ / Structural Details and Vault Calculations (separate building division review and permit required).
/ / Inverts - show for all pipes entering and leaving control structure or vault.
/ / Vent - minimum 2" diameter for pipe detention systems.

NA Maintenance Vehicle Access - required to both ends of detention pipes and two accesses to vaults (one near control structure). THROUGH ROOF, NOT THROUGH 36" PIPE.

__/__/__ Maximum Distance Between Detention System Access Points - 100 feet and ladder access must be provided at all ends.

__/__/__ Easement - 5' minimum around all public detention systems (20 foot minimum width).

__/__/__ Fire Hydrant - within 100 feet of detention pipe systems 4 feet in diameter or larger, and for all vault systems over 1000 cubic feet of total volume may be required.

__/__/__ Detention Pipe Note - "Detention pipes may be air tested before final acceptance".

INFILTRATION

NA Soil Permeability Tests or Gradation per D.O.E. - two tests minimum or one for every 5000 square feet of infiltration system bottom area. Test must end up being not more than 20 feet from the final location of the infiltration system. Note on plans - to be verified by field observation.

__/__/__ Soil Test - must be taken at the proposed bottom of infiltration system.

__/__/__ Excavation or Boring - is required in the trench area to a minimum depth of 4 feet below the proposed bottom of the trench. Infiltration not feasible if evidence of ground water or bedrock/hard pan.

__/__/__ Infiltration Bed - all infiltration system should be a minimum of 3 feet above the seasonal high water mark, bedrock, hardpan and impermeable layer.

__/__/__ Setbacks

- __/__/__ Minimum 500 feet from drinking water wells and springs, septic tanks and drain fields.
- __/__/__ Minimum 20 feet down slope and 100 feet up slope of building foundations.
- __/__/__ Minimum 10 feet from and NGPE and property line.

__/__/__ Down Spout Infiltration System - shall be designed with overall project for typical lot with individual homes.

__/__/__ Maximum Drainage Area

- __/__/__ Down Spout Infiltration Systems - 5000 sq. ft.
- __/__/__ Infiltration Basin - 50 acres.
- __/__/__ Infiltration Trench - 15 acres.

__/__/__ Infiltration System Location - may not be located in an area previously used as a sediment trap.

__/__/__ Inflow to an Infiltration System - must first pass through a pre-settling BMP or a biofilter. Disturbed areas shall not drain to the infiltration system.

__/__/__ Add the following note to the plan "The contractor shall construct infiltration systems only after the entire area draining to it has been stabilized".

__/__/__ Filter fabric is required on all sides, top and bottom of infiltration trenches.

__/__/__ Maximum Trench Length - 100 feet.

__/__/__ Observation Well - one is required per trench.

__/__/__ Provisions for the 100 year overflow path required.

__/__/__ Maximum Ponding - in an open infiltration basins is 3 feet for the maximum storm entering the basin (not to exceed the 100 year - this includes headwater to pass storm flow out any overflow) 1 foot of freeboard is required to the top of the structure.

N/A Basins Side Slopes - shall not exceed 3:1.

/ / Infiltration Basin Berm - must use impervious material for berm and the berm must be 2 feet wide at the top for each foot in height as measured from the ponding area bottom.

BIOFILTRATION (See DOE Chapter III-6)

N/A Required Length - 200 feet minimum (may be reduced to 150 feet for redevelopment projects only).

/ / Designed Storm - 6 month - 24 hour storm, high flow bypass required unless otherwise designated.

/ / Maximum Velocity - 1.5 fps for the design storm.

/ / Swale Slope - 6% maximum. For slope less than 2%, biofilter must be lined with underdrain. For slope greater than 4%, check dams must be provided.

/ / Setbacks - no buildings or trees within 10 feet of the normal high water.

/ / Vehicle Access - required for all biofilters for maintenance.

/ / Easement - public systems shall be in tracts, or easements, unless approved during site review.

/ / Cross Section - show dimensions, design flow depth and 1 foot minimum freeboard.

/ / Vegetation Specifications - shall provide for water tolerant plants and shall address shading of vegetation. Biofilter planting shall be shown on the civil drawings and subject to approval from the Construction Division.

/ / Swales/Trenches - including, grading, slope, spot elevations (a minimum of every 50 feet and at both ends), bottom width, side slopes, and lining.

/ / No filter strips allowed.

WETPOND/DETENTION FACILITIES

N/ / Setbacks - 20 ft minimum away from structure and ROW, and 50 ft minimum away from steep slope (15% or greater).

N/ / Length/Width Ratio - minimum of 3.0. (Preferred)

E/C Interior Slope - maximum of 3H:1V (Preferred) 2:1 Below water surface OK.

C/ / Permanent Pool - minimum of 6 months 24-hr release.

C/ / Live Storage - maximum of 100 years 24-hr release.

C/ / Berm Embankment - maximum of 6 ft. high. (Preferred)

C/ / Toe of Embankment - minimum of 55 ft. from ROW.

C/ / Factor-of-Safety - applied against overflow.

C/ / Multi-Celled - minimum of 2 cells. (Preferred)

C/ / Emergency Overflow - for open pond, shall be separated from pond outlet.

C/ / 5-Foot wide safety bench set at 1' depth around perimeter of pond. Plant bench with wetland planting.

N/ / Natural shape preferred.

E/C Liner provided for detention ponds, covered w/ 18" thick layer of compacted topsoil.

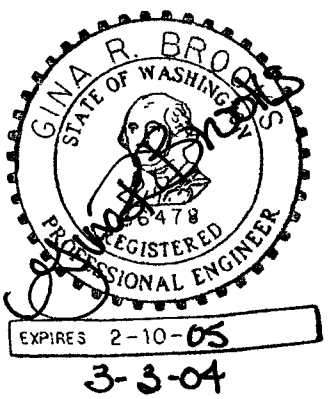
STORM DRAINAGE REPORT

FOR

CURRY P.R.D.

REDMOND, WASHINGTON



Prepared By: Gina R. Brooks, P.E.
Date: April 2002
Revised: December 2003, January 2004, March 2004
Core No.: 00009A

CURRY P.R.D.
TABLE OF CONTENTS

SECTION I: PROJECT OVERVIEW

The Curry P.R.D. is a proposed residential development consisting of single family residences. The subject property 15.68 acres in size. The property is bordered by 172nd Avenue NE to the west, the Proposed Plat of Wynstone to the north, residential properties to the south, and the Proposed Plat of Whistler Ridge to the east.

The property currently slopes from northwest to southeast with slopes varying from 2% to 7%. The property consists of two single family residences with associated outbuildings. The remaining portion of the property is covered by second growth trees and brush.

Proposed development of the property will include the demolition of all structures on the property and construction of 69 single family residences on 12.36 acres within the property. Frontage improvements along 172nd Avenue NE will also be installed as part of the subject project.

The runoff from the site will be detained on site and released at a controlled rate, based on the City of Redmond's design criteria for detention and water quality. A wetpond will be located at the southeast corner of the site. The detained flows will then be discharged into the proposed storm drainage bypass line located on 174th Place NE that was constructed as part of the Whistler Ridge project.

A small portion of a proposed development, currently named Cogan-Allen P.R.D. located opposite of Curry P.R.D along 172nd Avenue NE, will be discharging its drainage to the proposed tight-lined storm drainage system along 172nd Avenue NE that will be installed for the Curry P.R.D. This area that will be collected by Curry's storm drainage system will be treated and detained within the proposed Curry wetpond.

CONDITIONS OF APPROVAL

(Changes are in caps, underlined and in bold)

I. PLANNING REQUIREMENTS

A. SEPA: A Mitigated Determination of Non-Significance was issued for this project. The MDNS was amended to resolve a scrivener's error on March 28, 2003. The following mitigation measures are incorporated into this approval as conditions of approval:

1. 172nd Avenue NE. The applicant is required to construct a second southbound lane on 172nd Avenue NE as it approaches NE 116th Street. This will allow for the separation of southbound turning movements, which will decrease vehicle delay and improve level of service. The new lane is required to have a minimum storage length of 150 feet along with an appropriate transition back to the existing cross section. The traffic consultant reviewed the results of this improvement in the Traffic Impact Analysis. In 2005 with the project traffic and this mitigation, the southbound through movements will operate at LOS-E, with an approach delay of 42.8 seconds. Thus, this measure effectively mitigates the project impact to this movement by returning the level of service and delay to approximately the same as prior to the development. If the reconstruction of the intersection of NE 116th Street and 172nd Avenue NE as part of the planned widening of NE 116th Street is shown to be fully funded as part of the City of Redmond's 2004 Transportation Improvement Program, the City and the project applicant may propose the modification or elimination of this condition.

2. Water System. The project proponent shall mitigate adverse quantity or quality impacts that are demonstrated to have occurred during or within one year of site civil construction to domestic water supply wells on adjacent properties. This mitigation shall be required where it can be demonstrated that the adverse impacts occurred as an apparent result of dewatering of utility trench excavations, surface grading, storm-water collection or runoff of turbid storm-water or contamination caused by spillage and seepage of noxious substances on the site during construction. Each of four adjacent properties is served by its own well, more or less as shown on sheet P3 of the preliminary

PRD drawings dated 3/26/02. These adjacent properties potentially affected are King County tax parcel numbers 252605-9098, 252605-9097, 252605-9088 and 252605-9090. **EACH WELL SHALL BE TESTED PRIOR TO CONSTRUCTION TO ESTABLISH BASELINE CONDITIONS.** Should an impact **TO THE QUANTITY OR QUALITY OF THE WATER** be determined, each impacted property shall be provided with city water service. Water services shall be installed from the main fronting the affected property and meter setters and boxes placed to serve the residence. The water service shall further be extended from the meter box to the house and connection made to the existing plumbing. All work shall be done in accordance with city standards and all applicable codes. Connection, meter installation and reimbursement fees shall be paid to the city.

B. General Planning Requirements:

1. This approval is subject to all general criteria of the Redmond Community Development Guide and Redmond Municipal Code. Refer to Attachment VI.A, General Planning Approval Conditions, for a checklist of drawing, bond, and general planning requirements. The checklist does not substitute for the code; it is intended to be used as a guide in preparing your final construction drawing/building permit submittal. Refer to the Redmond Community Development Guide and Redmond Municipal Code for detailed information on each requirement.

2. To ensure compliance with residential site standards, at the time that construction drawings are submitted for Public Works review, the applicant shall provide two (2) copies of the construction drawings, clearing/grading plan and tree retention plan at a scale of 1" = 20' to the Planning Department.

3. A sign permit application must be submitted separately to the Planning Department for review and approval prior to installation of any proposed signs (RCDG Section 20D.160.10-020).

4. Transportation, parks, and fire impact fees shall be assessed at the time of building permit issuance for each residence. The fee in effect at the time of complete building permit application shall apply.

C. Specific Planning Requirements:

1. Planned Residential Development Approval. The proposal is dependent upon the approval of a Planned Residential Development application. The Hearing Examiner receives testimony and recommends to approve, conditionally approve, modify, or deny the application for Planned Residential Development to the Redmond City Council. The Preliminary Plat shall not be undertaken except in compliance with the approval of a Planned Residential Development application in the same format as those plans dated December 16, 2002.

2. Landscaping:

The landscape plan should include landscaping details for the storm water facility, which will enhance its appearance as a naturally occurring water feature (RCDG Section 20D.40.25-080). The general goal should be to create a varied planting pattern with a diversity of native species that would be found in a palustrine emergent, seasonally flooded (or otherwise inundated) wetland. The planting must be appropriate for the water regime that is anticipated. The design should be done by a qualified wetland consultant or landscape architect with experience in wetland mitigation or planting in wetland areas.

Landscaping shall be coordinated with water/sewer lines and fire hydrants/connections. Trees shall be planted no closer than 8 feet from the centerline of any water/sewer lines. Shrubs shall be planted to maintain at least 4 feet of clearance from the outside edge of the shrub to the center of all fire hydrants/connections. Ground cover may be planted within this radius. (RCDG Section 20D.80.10-150(8)).

Planting shall meet the City requirements for site clearance at intersections as identified in Section 20D.210.25 of the Redmond Community Development Guide. (20D.80.10-150(2))

For any landscaping along 172nd Avenue NE and 174th **PLACE** NE, an irrigation system shall be maintained by the Home Owners' Association or other means

acceptable by the City of Redmond Parks Department. Maintenance of landscaping shall be the responsibility of the Homeowners Association, including that portion

located within the public right-of-way along 172nd Avenue NE and 174th **PLACE** NE. Any installation or other work in the public right of way requires an Extended Right of Way Use Permit issued by the Public Works Department.

Street trees are required as follows (RCDG Section 20D.80.10-140):

Street	Species	Spacing on Center	Notes
172nd Avenue NE	*Cleveland Maples*	*30'*	*Minimum 2.5" caliper. Specimen to be grown for street use.*
Internal Streets	*To be determined.*	*TBD*	*Per Landscaping Requirements. Note: The City does not maintain internal street trees.*

Sensitive Areas:

a. A wetland and buffer enhancement plan shall be submitted with the Construction Drawings. The plan shall meet the requirements of Appendix 20D-2 (V) of the Redmond Community Development Guide.

b. A sensitive areas analysis shall be completed for off-site improvements that extend into areas with potential wetlands or streams. Mitigation will be required where improvements extend into a sensitive area or its buffer and beyond those improvements that currently exist.

c. A split rail fence shall be installed to delineate all sensitive areas and native growth protection area tracts. Sensitive area signage (available from the City of Redmond) shall be installed to provide for notice in the field regarding the presence of sensitive areas. Signage shall be affixed to the fence approximately

on the midpoint of each lot's rear property line. Where fencing does not abut an individual lot, signage shall be placed approximately every 100'. Signage and fencing shall be shown on the construction drawings. Final location and materials will be subject to approval by the Planning Department.

Tree Protection Measures:

d. Existing Significant Trees to Remain, as designated on the proposed Tree Preservation Plan, dated 12/16/2002, shall be saved.

e. Tree preservation measures for trees designated to be saved must at a minimum comply with required tree protection in RCDG Section 20D.80.20-100(1). These measures include but are not limited to the following requirements:

i. All construction activities, including staging and traffic areas, shall be prohibited within five feet of the dripline of protected trees.

ii. Tree protection barriers shall be installed along the outer edge and completely surround the area 5' from the dripline of significant trees to be protected prior to any land disturbance.

iii. Tree protection barriers shall be a minimum of four feet high, constructed of chain link, or polyethylene laminar safety fencing or similar material. "Tree Protection Area" signs shall be posted visibly on all sides of the fenced areas. Signs requesting subcontractor cooperation and compliance with tree protection standards may also be required to be posted at site entrances.

iv. Where tree protection areas are remote from areas of land disturbance, and where approved by the Planning Department, alternative forms of tree protection may be used in lieu of tree protection barriers, provided that protected trees are completely surrounded with continuous rope or flagging and are accompanied by "Tree Save Area-Keep Out" signs.

v. Per RCDG Section 20D.80.20-080(1), each significant tree that is removed on the site must be replaced by one new tree. The required number of replacement trees must be identified on the Tree Replacement Plan. The minimum size of replacement trees is 2-½ -inch caliper for deciduous trees and six to eight feet in height for evergreen trees. **STREET TREES OF THIS CALIPER WILL BE COUNTED AS REPLACEMENT TREES.**

vi. Two copies of the final Tree Preservation Plan, Landscape Plan and Tree Replacement Plans at 1"=20' scale must be submitted with construction drawings and approved prior to issuance of construction drawings. The final plans shall be prepared or approved by a licensed landscape architect, registered Washington certified nurseryman or registered Washington certified landscaper (RCDG Section 20D.80.10-040). This certification shall be noted on all landscape-related plans. A copy of the Tree Preservation Plan shall be recorded with the Final Plat.

vii. Restrictive covenants shall include a statement notifying property owners and the Homeowner's Association that significant and landmark trees on individual lots may only be removed in accordance with the approved tree retention plan. This language shall be reviewed and approved by the Planning Department prior to recording of the restrictive covenants with King County.

viii. A tree health assessment shall be completed for off-site improvements that extend into areas with significant and landmark trees. Mitigation will be required where trees are removed or improvements extend within 5' of the dripline of any healthy, significant or landmark tree, beyond those improvements that currently exist.

Reduction of Front Yard Setback. The proposed reduction in front yard setback to below the required 10' is not approved. The site plan shall be revised such that the 10' front yard setback is met. Impacts to trees resulting from the change shall be mitigated.

II. ENGINEERING REQUIREMENTS

A. No lots shall be permitted direct access to 172nd Avenue NE. The specific lots affected by this restriction shall be listed on the face of the final plat and other documents.

B. Easements & Dedications: Existing and proposed easements and rights-of-way shall be shown on the final plat, civil plans and other documents. Any existing easements for ingress, egress, private utilities, franchise utilities, etc. that lie within the Plat or within rights-of-way adjacent to the Plat shall be released or modified to the City of Redmond's satisfaction prior to final plat approval.

1. Public easements are required as follows:

a) 10-feet wide for sidewalk and utilities adjacent to the right of way along the east side of 172nd Avenue NE.

b) 10-feet wide for sidewalk and utilities adjacent to the right of way along the west side of 174th Place NE.

c) 10-feet wide for sidewalk and utilities adjacent to the rights of way along both sides of the internal plat streets: NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE.

d) 10-feet wide for pedestrians from NE 119th Court across private Tract E to 172nd Avenue NE and from 173rd Place NE across private Tracts G and H to 174th Place NE.

e) Rights-of-way dedicated to the City of Redmond are required as follows: 50 feet wide for the internal plat streets: NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE.

f) Private tracts are required as follows:

(1) 35 feet wide for the internal plat streets within Tracts F, G and I.

(2) 20 feet wide for the internal plat streets within Tracts E and H.

(3) New right-of-way lines joining at intersections shall connect with a minimum of a 25-foot radius, or with a chord that encompasses an

equivalent area. The area formed by this radius or chord shall also be dedicated as right-of-way.

(4) All lots are subject to an easement for utilities and drainage facilities over, under and across a strip of land 2-1/2 feet wide along each side of the interior lot lines within the development, together with a strip of land 5 feet wide along the lot lines around the perimeter of the development.

C. Public and Private Engineering/Transportation Improvements

1. Half street improvements are required on 172nd Avenue NE including asphalt paving 18 feet from centerline to face of curb with appropriate tapers, type A-1 concrete curb and gutter, planter strip, concrete sidewalk, storm drainage, streetlights, street trees, street signs and underground utilities including power and telecommunications. The minimum pavement section for 172nd Avenue NE shall consist of:

a) 4" Asphalt Pavement Cl. A

b) 5" Asphalt Pavement Cl. E

c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTMD 1557)

d) Street crown 2% sloped to drain system

2. Half street improvements are required on 174th Place NE behind the existing curb and gutter including planter strip, concrete sidewalks, street lights, street trees, street signs and underground utilities including power and telecommunications.

3. On 172nd Avenue NE and 174th Place NE the asphalt street shall be planed, overlaid, and/or patched to repair damage done by utility cuts and other work, as determined by the Engineering Division.

4. Sidewalks constructed to City standards are required within the pedestrian easements between private Tract E and 172nd Avenue NE and between private Tracts G and H.

5. Other off-site improvements include widening of 172nd Avenue NE on the southbound approach to NE 116th Street as outlined in the SEPA conditions for this Plat.

6. Prior to the City allowing occupancy of any home constructed within the Curry Property Plat, the developer shall design and construct an interim walkway for school children along the east side of 172nd Avenue NE from the pedestrian connection at Tract E to NE 116th Street, along with other minor improvements at the 172nd Avenue NE/NE 116th Street intersection as needed to ensure safe crossing of these streets. The interim walkway shall be constructed of asphalt or Portland cement concrete. The interim walkway shall be a minimum of 5-feet wide when located adjacent to curb and gutter or other traffic barrier acceptable to the City. The interim walkway shall be a minimum of 4-feet wide and located a minimum of 10-feet from the street edge where no curb and gutter or other traffic barrier acceptable to the City exists. A safety railing or fencing will be required when (1) the interim walkway is located at the top of a slope or wall that is 2:1 or steeper and (2) the walkway elevation is 30-inches or higher than the toe of the slope or wall. This requirement is also a condition for the Wynstone Plat located to the north of the Curry Property. The applicant is encouraged to work with the Wynstone Plat applicant to share the cost of this improvement. For that portion of the safe walking route across Tax Parcel 252605-9098, completion of the curb, gutter and sidewalk is likely the most cost effective alternative.

7. All vehicle use areas including driveways, private streets, service areas, etc. shall be paved.

8. Specific subdivision public street improvement conditions for NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE:

a) Street improvements within the 50-foot wide dedicated right-of-way shall include asphalt paving (28 feet curb to curb), with appropriate tapers, type A-1 concrete curb and gutter, planter strips, street trees, concrete sidewalks, storm sewers, streetlights, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(1) 3" Asphalt Pavement Cl. B

(2) 4" Asphalt Treated Base

(3) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTMD 1557)

(4) Street crown 2% sloped to drain system

(5) The cul-de-sac on NE 119th Court is required to have a minimum radius of 44 feet to the face of curb. A planter island shall be provided in the center of the cul-de-sac to reduce, as much as possible, the amount of asphalt. The maintenance of the landscape in the island shall be the responsibility of the adjacent property owners. This maintenance requirement shall be included on the face of the final plat.

b) Specific short subdivision private street improvement conditions for the internal streets within Tracts F, G and I:

(1) Street improvements shall include asphalt paving (28 feet), with appropriate tapers, thickened asphalt edge or type A-1 concrete curb and gutter, concrete sidewalk (one side), storm sewers, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(a) 2" Asphalt Pavement Class B

(b) 4" Crushed Rock surfacing

(c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTM D 1557)

(d) Street crown 2% sloped to drain system

c) Specific short subdivision private street improvement conditions for the internal streets within Tracts E and H:

(1) Street improvements shall include asphalt paving (20 feet), with appropriate tapers, thickened asphalt edge or type A-1 concrete curb and gutter, storm sewers, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(a) 2" Asphalt Pavement Class B

(b) 4" Crushed Rock surfacing

(c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTM D 1557)

(d) Street crown 2% sloped to drain system

(2) Installation of mailbox stand(s) shall be in accordance with City standards.

d) All power, telephone, streetlights, etc. shall be shown on the engineering drawings and landscape plans submitted for construction permits.

e) A composite drawing that includes all utilities, landscaping including trees, etc., is necessary to minimize the possibility of utilities/landscaping conflicts.

f) Conversion of Aerial Utilities (Power, Telephone, T.V., Etc. to Underground)

(1) All aerial utilities shall be converted to underground along all street frontages and within the plat according to 20D.220.10 "Underground Wiring" in the Redmond Community Development Guide.

D. The applicant shall meet the construction plan and construction requirements in Attachment B, "REQUIREMENTS FOR CONSTRUCTON DRAWINGS" and Attachment C, "GENERAL INFORMATION AND ADMINISTRATION REQUIREMENTS" **from the Technical Committee Report dated March 31, 2003.**

III. UTILITIES REQUIREMENTS

A. Sewer

1. Sewer service will require a developer extension of the City of Redmond sewer system as follows:

a) Construct sanitary sewer improvements more or less as shown on the Preliminary Plat drawings dated December 12, 2002.

b) (The sewer main location shown on the site plan may not conform to City standard location. Revisions to comply with City standard locations may be required.)

2. Vehicular access to all new and existing manholes shall be provided. The access easement shall be a minimum of 20 feet in width with asphalt concrete surfacing. Alternative surfacing may be approved by the City depending upon the location. If access passes through fencing then 14-foot minimum width gates shall be provided. The plat or easement document shall (1) show and dedicate the 20-foot access easement, (2) have covenants advising property owners of their obligation to maintain the availability of the access by providing gates and not obstructing the access, and (3) that the property owners maintain, repair and replace the access surfacing as needed.

B. Water:

1. Water service will require a developer extension of the City of Redmond water system as follows:

a) Construct on-site water improvements more or less as shown on the Preliminary Plat drawings dated December 12, 2002. A 12-inch water main shall be constructed to serve the site in 172nd Avenue NE from NE 116th Street to the northern limits of the plat, more or less as shown on the Preliminary Plat drawings. An 8-inch stub shall be extended across 172nd Avenue NE in the vicinity of NE 117h Street and connected with the existing 8-inch main in that vicinity.

b) (The water main location shown on the site plan may not conform to City standard locations. Revisions to comply with City standard locations may be required.)

IV. CLEARING/GRADING AND STORMWATER MANAGEMENT

A. Erosion control systems must be implemented throughout the construction process and until the site is stabilized. Design of all systems must be in accordance with section 20E.90.10 of the Community Development Guide and the most recent issue of the City of Redmond STORMWATER MANAGEMENT AND EROSION CONTROL TECHNICAL NOTEBOOK

(notebook). Contact the Stormwater Division at 556-2890 for information about, or a copy of, the notebook. Preferred methods for management and control are discussed in the notebook.

B. Stormwater Management

1. Quantity Control

a) In an open pond; provide detention for peak discharge control to match one half of the 2-year and match the 10-year and 100-year storms natural (prior to any development) runoff peak flow rates.

b) Provide for overflow routes through the site for the 100 year storm runoff (100 year flow may not impact any buildings).

2. Quality control. Use a lined, open pond to provide water quality treatment for the runoff from the 6-month, 24-hour design storm event. Use the developed condition land use when determining the water quality storm flow rate and volume.

3. Provide maintenance vehicle access to the pond bottom and outlet control structure from 174th Place NE.

C. Miscellaneous

1. Construction activities may be limited or suspended during the rainy season (October 1 – April 30).

2. Stencil all on-site storm drainage inlets with "DUMP NO WASTE DRAINS TO STREAM". Stencils are available from the Stormwater Division located at the City Annex (phone 556-2840). Design plans shall identify the requirement to stencil drainage inlets. Easements will be required for any public conveyance systems.

3. Trees are not allowed within 8 feet of storm systems.

4. Ponds shall be lined in accordance with the Department of Ecology Stormwater Management Manual for the Puget Sound Basin, (1992).

5. Designate private roads on the construction plans and plat drawings by adding (Private) after the road name.

V. FIRE PROTECTION

A. EMERGENCY VEHICLE ACCESS ROADWAY REQUIREMENTS

1. Emergency vehicle access roadways shall be an unobstructed 20 feet in width and 13' 6" high. Turning radii shall be 25' interior and 45' exterior.

2. Fire lanes shall be located wherever curbs, road edges, or loading areas are adjacent to the 20-foot wide vehicle access roadway. Fire lanes identified through site plan review shall be included on the final civil drawings. Additional fire lanes and marking may be required anytime during the life of the development upon evaluation by and direction of the Fire Marshal. Where fire lanes are a 28 feet wide access tract or easement, the side not used for parking shall be signed "No Parking - this side" or "No Parking –Fire Lane- this side". If the access tract or easement is 20 feet then both sides shall be signed.

3. Driveway entries or curb returns shall be provided to meet minimum roadway radii at all tracts, easements or other intersections. Do not measure into areas where parking is allowed. This includes where Tract E meets 172nd Ave NE.

4. Traffic circles shall not impede into required radii. The circle at NE 119th and Tract E, and at NE 119th and 173rd AVE NE shall be reduced in diameter to allow through movements in both directions.

B. ADDRESSING

1. Each lot shall have the building address numerals installed per the Redmond Fire Department Design and Construction Guide. A nominal 6-inch high numeral shall be used.

2. Approval is required for building and unit addressing.

3. Temporary signs shall be used at the job site as soon as construction begins. Numerals shall be high contrast in color, face the street fronting the property, and be a minimum 6" high.

4. The "T" road labeled NE 118th shall be called 172nd Ct NE and so signed at the intersection with NE 117th Way. Lots 66, 65 and 64 shall be addressed with 117xx, ascending odd numbers. Lots 62 and 63 shall be addressed with 117xx, ascending even numbers.

5. Lots 14, 13, 16, 15 shall be ascending odd numbers addressed off 174th Pl NE.

C. CITY APPROVED FIRE ALARM SYSTEM: Single station smoke detection is required in all residential occupancies.

D. KNOX BOX: A "Knox" padlock is the only locking device approvable for the bollards at Tract E. Contact the Redmond Fire Department for purchase information.

E. HYDRANTS

1. Hydrants must be in place and serviceable prior to combustible construction.

2. Planter islands or peninsulas for hydrants require a minimum diameter of 8 feet. Four feet is to be maintained between face of curbs and fire protection equipment. Hydrants shall not be located behind parking. See the hydrant on the west side of 173rd Pl NE, just south of NE 118th CT (Tract F). This may need to be moved to the east side of the street.

OTHER: ADDITIONAL REQUIREMENTS MAY BE SET ON REVIEW OF CIVIL, ARCHITECTURAL, FIRE ALARM AND/OR FIRE SPRINKLER PLANS.

SECTION III: OFFSITE ANALYSIS

Upstream:

Upstream area will consist of the open space designated within the property along with the property that is surrounded by the subject property and adjacent to 172nd Avenue NE. The asphalt section along the frontage on 172nd Avenue NE from the crown of the road to the existing edge of asphalt will also be considered upstream tributary area.

Downstream:

The site naturally drains to a low area located at the southeast corner of the site. A wetpond will be located in this low area and will discharge to the 18" storm drainage bypass system along 174th Place NE that was constructed as part of the Whistler Ridge development (PPL99-001). The bypass line will convey flows south along the proposed 174th Place NE and then east along NE 116th Street.

Drainage that enters the bypass system along 174th Place NE will include the discharge from the Curry PRD pond plus some adjacent residences along 174th Place NE. The storm drainage report for Whistler Ridge does not state the allowable release rate from the Curry PRD that can be conveyed within the bypass system. Therefore, a basin analysis has been completed within this report in Section V that shows all flows approaching and entering the bypass system along 174th Place NE and an analysis of the bypass system and whether or not the size is adequate to accept the incoming drainage.

SECTION IV: DETENTION ANALYSIS AND DESIGN

A. Hydraulic Analysis

Storm water runoff for the site was modeled using WaterWorks hydrology software and the Santa Barbara Urban Hydrograph Methodology. Soils type on-site are Alderwood gravely sandy loam, hydrologic group C. The detention criteria used for this analysis is per the Stormwater Management Manual for the Puget Sound. The required peak release rates are as follows:

Dev 2-year, 24-hr peak release → 50% Pre-Dev 2-year, 24-hr peak release
Dev 10-year, 24-hr peak release → Pre-Dev 10-year, 24-hr peak release
Dev 100-year, 24-hr peak release → Pre-Dev 100-year, 24-hr peak release

The precipitation rates used for this analysis are as follows:

6-month, 24-hour storm → 1.16 in.
2-year, 24-hour storm → 1.81 in.
10-year, 24-hour storm → 2.73 in.
100-year, 24-hour storm → 3.69 in.

Pre-Developed Conditions

Pre-Developed conditions for the project site were analyzed assuming 100% pervious ground cover consisting of second growth forest as defined in the City of Redmond code under the definition of Pre-Development Conditions. See "Site Plan Basin Map" exhibit on the following pages. Proposed development of the property will include the demolition of all structures on the property and construction of 69 single family residences on 12.36 acres within the property boundary. Half-street improvements along 172nd Avenue NE adjacent to the property will be constructed as part of the development. The area defined as the existing site will include that area along the frontage from the edge of existing asphalt to the property line. A portion of the frontage will be bypassing the proposed storm drainage system. Another portion of improvements along 172nd Avenue NE which includes the addition of a 25:1 taper and a 5' asphalt walkway from the subject site to NE 116th Street will also bypass the proposed storm drainage system. These areas of bypass, 5,421 square feet or 0.12 acre, will be compensated for by taking an equal area of existing asphalt along the frontage that will be collected and treating it as 2nd Growth Forest in its existing condition. This is a conservative approach since the frontage improvements will include some pervious area installation in the form of a planter strip.

Frontage area that will be collected, detained, and treated within the site boundary is 0.51 acre. This frontage area includes those areas that will be directly collected by the proposed 172nd Avenue NE conveyance system but does not include the delineated

Upstream Tributary Conditions

Upstream area will consist of the open space designated within the property, 3.37 acres, along with the property that is surrounded by the subject property and adjacent to 172nd Avenue NE, 0.71 acre. The existing asphalt section collected within the proposed storm drainage system along the frontage on 172nd Avenue NE from the crown of the road to the existing edge of asphalt, 0.08 acre, will also be considered upstream tributary area. The impervious coverage for the property along 172nd Avenue NE was calculated using Table III-1.3 in the 1992 D.O.E. Manual. The dwelling units per gross acre is 1 DU/0.71 AC = 1.4 DU/AC. The impervious coverage is therefore 19% or 19%*0.71 acre = 0.13 acre.

UPSTREAM TRIBUTARY CONDITIONS	Total Area = 4.16 acres	Pervious/ Impervious Areas		CN (avg)
GROUND COVER	AREA(acre)		CN	
2nd Growth Forest	3.37		81	
Lawn (Landscaping)	0.58	3.95	86	81.73
Impervious	0.21	0.21	98	98
Time of concentration				92.56 min.

B. Water Quality Calculations

Water quality will be accomplished by providing dead storage in the wetpond. According to the DOE manual, the dead storage of the wetpond shall be equal to the volume of the water quality storm in the developed condition. The water quality storm is defined as a storm having a precipitation of 64% of the 2-year precipitation.

The water quality storm for the site has a volume of 0.80 ac-ft or 34,704 CF. The water quality storm for the Cogan-Allen site has a volume of 0.07 ac-ft or 2,903 CF. Therefore, the total dead storage required is 37,607 CF. The live storage in the pond will therefore begin at the water surface elevation of the dead storage. Referring to the volume calculations for the pond on the following pages, the volume of the dead storage at elevation 267.0 where the live storage begins is 39,278 CF which exceeds the volume of the required dead storage.

C. Detention Calculations

A detention/water quality pond will be located at the southeast corner of the site. A stage-storage relationship was calculated for the proposed wetpond. The proposed wetpond will have a bottom elevation of 263.5 in the first cell and 264.0 in the second cell, a maximum water surface elevation of 270.71, and a berm elevation of 272.0. The outlet elevation will be located at elevation 267.0. This elevation as shown previously will provide the necessary dead storage for the dead storage portion of the pond. See volume calculations for the live storage in the water quality portion of this section.

The total release from the pond will not exceed the allowable peak releases as indicated below. The detention criteria used for this analysis is D.O.E. criteria. The required peak release rates are as follows:

- ♦Developed 2-year, 24-hr peak release + Cogan-Allen Developed 2-year, 24-hr peak release + Upstream Tributary 2-year, 24-hr peak release (Hyd. 10) → 50% (Existing 2-year, 24-hr peak release + Cogan-Allen Existing 2-year, 24-hr peak release) + Upstream Tributary 2-year, 24-hr peak release (Hyd. 7)

- ♦Developed 10-year, 24-hr peak release + Cogan-Allen Developed 10-year, 24-hr peak release + Upstream Tributary 10-year, 24-hr peak (Hyd. 11) → Existing 10-year, 24-hr peak release + Cogan-Allen Existing 10-year, 24-hr peak release + Upstream Tributary 10-year, 24-hr peak (Hyd. 8)

- ♦Developed 100-year, 24-hr peak release + Cogan-Allen Developed 100-year, 24-hr peak release + Upstream Tributary 100-year, 24-hr peak (Hyd. 12) → Existing 100-year, 24-hr peak release + Cogan-Allen Existing 100-year, 24-hr peak release + Upstream Tributary 100-year, 24-hr peak (Hyd. 9)

See attached WaterWorks printouts on the following pages. The routing results are summarized as follows.

SECTION V: CONVEYANCE SYSTEM ANALYSIS AND DESIGN

The conveyance system for the site was designed for both the 10-year, 24-hour storm and the 100-year, 24-hour storm. A conveyance sheet was generated for the 10-year and 100-year storms using SBUH methodology to calculate flows for each area collected by each catch basin. The precipitation rates for the 10-year, 24-hour storm and the 100-year, 24-hour storm are 2.73 inches and 3.69 inches respectively.

The flows generated from the 10-year, 24-hour and 100-year, 24-hour storms were input into a backwater analysis spreadsheet to confirm adequate sizing. The total developed flows that were calculated for the Cogan-Allen P.R.D. that are draining to the proposed conveyance system will be input into the conveyance system at CB 42. The SBUH flows generated from the 10-year, 24-hour and 100-year, 24-hour storms for Cogan-Allen are 0.58 cfs and 0.87 cfs respectively.

The tailwater elevations within the pond were derived from the WaterWorks Level Pool Table Summary. The tailwater elevations for the 10-year, 24-hour storm and the 100-year, 24-hour storm are elevation 270.35 and elevation 270.71 respectively.

The backwater analysis was performed to ensure that during the 10-year design storm, the maximum water surface elevation in each structure did not exceed an elevation equal to 1' less the rim. The backwater analysis was also performed to ensure that during the 100-year design storm, if the maximum water surface elevation were to exceed any rims, that flows could either be safely conveyed to the next downstream catch basin or ponding water could be ensured not to cause damage to buildings.

Each area tributary to each catch basin was assumed to have a consistent impervious coverage as the entire site. The percentage of impervious coverage for the entire developed site is 8.92 AC/12.87 AC = 69.3%. See Developed Conditions summary in Section IVA of this report.

Some catch basins collect portions of the developed site plus portions of the open space. These catch basins include CB 8, CB 12, CB 13, CB 21, CB 22, CB 28, and CB 45. The CN value for the open space within the property is 81. These catch basins will each have a different CN value for the pervious areas based on the characteristics and portion of the open space collected.

CB 37 was specifically located to collect drainage upon development of the property that is adjacent to 172nd Avenue NE and not part of the subject development. It is assumed that CB 37 collects this property under its existing condition today. This property is summarized in Section IVA of this report under Upstream Tributary Conditions. Upon development of this property, detention will be required and existing flows as they are today will be reduced to flows that would be calculated using forest conditions per the City criteria for detention sizing. Therefore, worst case flows to CB 37 are the conditions

as they are today. The impervious coverage is 0.13 acre with a CN = 98 and a pervious coverage of 0.71 acre – 0.13 acre = 0.58 acre with a CN = 86.

CB 8

Open Space Collected:	1.35 AC – CN = 81	
Site Area Collected:	0.34 AC – 69.3% impervious →	0.24 AC – CN = 98
		0.10 AC – CN = 86
	Impervious 0.24 AC – CN = 98	
	Pervious 1.45 AC – CN_{avg} = 81.3	

CB 12

Open Space Collected:	0.31 AC – CN = 81	
Site Area Collected:	0.26 AC – 69.3% impervious →	0.18 AC – CN = 98
		0.08 AC – CN = 86
	Impervious 0.18 AC – CN = 98	
	Pervious 0.39 AC – CN_{avg} = 82.0	

CB 13

Open Space Collected:	0.48 AC – CN = 81	
Site Area Collected:	0.43 AC – 69.3% impervious →	0.30 AC – CN = 98
		0.13 AC – CN = 86
	Impervious 0.30 AC – CN = 98	
	Pervious 0.61 AC – CN_{avg} = 82.1	

CB 21

Open Space Collected:	0.33 AC – CN = 81	
Site Area Collected:	0.65 AC – 69.3% impervious →	0.45 AC – CN = 98
		0.20 AC – CN = 86
	Impervious 0.45 AC – CN = 98	
	Pervious 0.53 AC – CN_{avg} = 82.9	

CB 22

Open Space Collected:	0.02 AC – CN = 81	
Site Area Collected:	0.51 AC – 69.3% impervious →	0.35 AC – CN = 98
		0.16 AC – CN = 86
	Impervious 0.35 AC – CN = 98	
	Pervious 0.18 AC – CN_{avg} = 85.4	

CB 28

Open Space Collected:	0.12 AC – CN = 81	
Site Area Collected:	0.46 AC – 69.3% impervious →	0.32 AC – CN = 98
		0.14 AC – CN = 86
	Impervious 0.32 AC – CN = 98	
	Pervious 0.26 AC – CN_{avg} = 83.7	

CB 45

Open Space Collected:	0.37 AC – CN = 81	
Site Area Collected:	0.30 AC – 69.3% impervious →	0.21 AC – CN = 98
		0.09 AC – CN = 86

Impervious 0.21 AC – CN = 98

Pervious 0.46 AC – CN_{avg} = 82.0

During the 10-year, 24-hour storm, all headwater elevations within each catch basin remained 1-foot or more below the rim elevations. During the 100-year, 24-hour storm, all headwater elevations remained below all catch basin rims.

OVERFLOW ROUTES

The overflow routes are shown on the Catch Basin Subbasin Map exhibit. The overflow routes are indicated by arrows. All overflows are safely conveyed through the site without impact to any proposed houses. The only catch basins of concern are CB 25, CB 26, and CB 35. Possible overflow from CB 25 and CB 26 could overflow onto the adjacent property to the south. To prevent overflow from entering the southern property, a thru-curb grate was added to CB 26 thereby, eliminating plugging of the catch basin. Also, an asphalt-thickened edge was added to the end of the stub road. Any overflow from CB 25 will overflow the crown of the road and flow into CB 26 before jumping the asphalt-thickened edge and flowing onto the southern property. The southern property will therefore, not experience any overflow from the subject property with the addition of a thru-curb grate to CB 26 and an asphalt-thickened edge constructed at the end of the stub road.

A shallow ditch was created that will convey overflows from CB 35 if the catch basin becomes plugged. The ditch was designed with a 100-year, 24-hour peak flow from the basin that would drain overland to CB 35. Per the proposed topography of the site, the only basin area that will contribute overflow is from Subbasin 35. See Catch Basin Subbasin Map. The 100-year, 24-hour peak flow from Subbasin 35 is 0.44 cfs. See WaterWorks Basin Summary sheet attached within this section of the report. Attached on the following page is an excel spreadsheet that calculates the capacity of a V-ditch designed with a worst case 0.5% longitudinal slope, 3:1 side slopes, and grass-lined with an n = 0.027 (1992 DOE Table III-2.8). The V-ditch can carry the required 0.44 cfs at 0.36' of depth. The V-ditch therefore, will be designed with a depth of 0.86' to allow for 0.5' of freeboard.

DOWNSTREAM CONVEYANCE SYSTEM

The 18" storm drainage bypass system was designed and installed along 174th Place NE by the Whistler Ridge development to accept drainage from the Curry PRD and any tributary area that sheetflows to 174th Place NE from the west. The bypass system is an 18" storm drainage system that is at worst designed at a 1.99% slope along 174th Place NE per the City approved plans for the Whistler Ridge development.

The tributary area that drains to 174th Place NE, aside from the Curry PRD discharge, is approximately 1.5 acres. The impervious coverage for the approximately 1-1/2 properties that drains to 174th Place NE was calculated using Table III-1.3 in the 1992 D.O.E. Manual. The dwelling units per gross acre is 1.5 DU/1.5 AC = 1 DU/AC. The impervious coverage is therefore 19% or 19%*1.5 acre = 0.29 acre. The basin summary for the tributary area that drains to 174th Place NE is delineated below. See WaterWorks printout on the following page.

174th PL. NE TRIBUTARY CONDITIONS	Total Area = 1.5 acres	
GROUND COVER	AREA(acre)	CN
Lawn (Landscaping)	1.21	86
Impervious	0.29	98
Time of concentration	Assumed	10.00 min.

To convey the 100-year release rate from the proposed Curry PRD detention/water quality pond and the100-year, 24-hour storm event from those properties that drain directly to 174th Place NE, the 18" storm drainage bypass system would need to convey 3.21 cfs. See Hydrograph 16 (Sum of the 100-year pond release and the 100-year, 24-hour storm event for 174th Pl. NE Tributary) in Section IV.C. of this report.

The 18" storm drainage system along 174th Place NE which is at worst sloped at 1.99% can carry $Q(full) = 1.49/n*A*R^{2/3}*S^{1/2} = (1.49/0.012)(\pi/4*1.5^2)(0.75/2)^{2/3}(0.0199)^{1/2} =$ 16.1 cfs which exceeds the required 100-year flow that would enter the 18" storm drainage system along 174th Place NE as calculated above. Therefore, the downstream bypass storm drainage system along 174th Place NE has been adequately sized to convey all drainage that is tributary to the storm drainage system along 174th Place NE.

SECTION VI: EROSION/SEDIMENTATION CONTROL DESIGN

A combination of silt fence, interceptor ditch along with a sediment pond will be used for all disturbed areas to control sediment laden runoff from leaving the site. The sediment pond was designed per the Department of Ecology Manual, Section II-5.8.7.

Design Sediment Pond

Q_{10} = 6.46 cfs (assuming developed conditions)
Required Surface Area = 1250 SF/cfs * Q_{10} = 1250 * 6.46 = 8,075 SF

The provided surface area at the top of the standpipe for the sediment pond is approximately 19,674 SF at elevation 269. The provided surface area exceeds the minimum required surface area and therefore, will provide the treatment as required per the Department of Ecology Manual.

I. CALL TO ORDER

II. DESCRIPTION OF HEARING SEQUENCE AND PROCEDURES

III. PUBLIC HEARING

Curry Preliminary Plat and Planned Residential Development - PRD02-001

Request: Subdivision of approximately 15.68 acres into lots for 69 single-family residential dwellings designed as a planned residential development.

Location: North of NE 116th Street on the east side of 172nd Ave NE, includes 11840 172nd Ave NE.

IV. ADJOURNMENT

O:\Sheryle\HE3-31

The following exhibits were offered and admitted:

Exhibit A:	Technical Committee Report dated 3/31/03 with attachments
Exhibit B:	Letter from City to Harkness requesting additional information – 6/12/02
Exhibit C:	Traffic Impact Analysis from Gary Struthers Associates, Inc. – 11/22/02
Exhibit D:	Letter from City to Harkness requesting additional information – 11/15/02
Exhibit E:	Letter from City to Harkness re: Curry PRD/PPL SEPA determination and MDNS dated 2/13/03
Exhibit F:	Memo from Gary Struthers Associates, Inc and attached email
Exhibit G:	CamWest's Powerpoint presentation

The Examiner visited the site prior to the hearing. The hearing adjourned at 8:15 pm

From the foregoing the Examiner makes the following:

FINDINGS OF FACT

1. Proposal. CamWest Development Inc. (CamWest) proposes to subdivide a 15.68-acre site into lots for 69 single-family residential dwellings to include roads, sidewalks, stormwater facilities, sewer and water lines, landscaping, and a major open space for trails and public access and enjoyment.

2. Site. The site is located at 11840 172nd Avenue NE and lies generally north of NE 116th Street and east of 172nd Avenue NE. The residence of Gerald and Telka Gustafson at 11810 172nd Avenue NE is surrounded by and excluded from the site. The proposed Wynstone Development lies to the north and the Whistler Ridge plat, now under construction, lies to the east. One tier of single-family lots separates the site from NE 116th Street. The site is generally flat, slopping from Northwest to Southeast and consists of 55% trees, 40% pasture grass, and 5% structures. It is currently developed with three single-family homes and outbuildings.

3. Comprehensive Plan – Zoning. The site is in the North Redmond Neighborhood and is designated for Low-Moderate Density Residential uses. It is zoned R-4. All surrounding land is also zoned R-4, except for portions of King County which lie to the west and are zoned R-8.

4. Access. Vehicular access to the site will be from 172nd Avenue NE, from the Wynstone plat to the north, from the Whistler Ridge plat to the east and from a new 173rd Place NE to the south. None of the residences will have direct access from 172nd Avenue NE. School children will be able to walk safely to bus stops on NE 116th Street.

5. SEPA. A Mitigated Determination of Non-Significance (MDNS) was issued on February 14, 2003. The appeal period ended on March 17, 2003. There was no appeal. Two conditions were attached to the MDNS:
   - Applicant will be required to construct a second southbound lane on 172nd Avenue NE as it approaches NE 116th Street, to separate right-turning vehicles from other traffic.
   - Applicant must mitigate adverse quality and quantity impacts of construction to domestic water supply wells on adjacent properties caused by construction of the subdivision.

6. Impact Fees. Applicant shall pay impact fees at the rates in effect when building permits are issued, as follows:
   - Fire. Now $94.00 per single-family dwelling unit
   - Transportation. Now $3,064.15 per single-family dwelling unit
   - Parks. Now $1611.00 per single-family dwelling unit

7. Trees. There are 560 significant and landmark trees on the site. Applicant proposes to remove 13 landmark trees and 30 significant trees. Eleven landmark trees and 33 significant trees will be "retained", and 51 landmark trees and 145 significant trees will be "saved". Trees that are "retained " are those from which site work is proposed to

occur within 5 feet of the designated drip line. Trees that are to be "saved" are those that will not be subject to such site work. As a result, Applicant will save more than 35% of all healthy significant trees. Applicant has received administrative approval to remove or impact the root protection zone of 24 landmark trees. All trees to be saved will be in Native Growth Protection Areas, in common areas or on residential lots.

8. Planned Residential Development. Applicant proposes to cluster the housing on smaller than average lots in order to establish a major open space in the tract. If approved, this will allow the following modifications of the normal development regulations:

Regulation	**Normal**	**Proposed**
Density	63 dwelling units	69 dwelling units
Mimimum Average Lot Size	7,000 sq. ft	5, 498 sq. ft.
Minimum Lot Width Circle	40 ft.	20 ft.
Minimum Lot Frontage	20 ft.	11ft. & 9 ft. on Lots 17 & 8
Front Setback	15 ft, 18 ft for garage	10 ft. w/5 ft. for Lots 20 & 53
Side Setback	5 ft. & 10 ft.	4 ft. for 4 lots
Side Street Setback	15 ft.	10 ft. for 11 lots
Minimum Building Separation	10 ft.	8 ft. for 4 lots
Maximum Lot Coverage	35%	45%
Maximum Impervious Surface	60%	70%
Minimum Open Space	20%	(See site plan)

The Technical Committee recommends approval of all of the proposed modifications except for the 5-foot setbacks for lots 20 and 53. All modifications require City Council approval in the Planned Residential Development.

9. Studies. In support of the application, applicant submitted the following studies:
   - Arborist Report

- Stormwater Drainage Report
- Landmark Tree Removal Request
- Wetland Determination and Conceptual Mitigation
- Wildlife Study Report
- Preliminary Geotechnical Report
- Traffic Impact Analysis
- Phase I Environmental Survey

10. Stormwater. Stormwater runoff will be collected in a series of catch basins and conveyed by an underground system into an open detention and water quality pond. The system will be designed to match one-half of the two-year storms and match the 10 year and 100 year storms, based upon predevelopment runoff peak flow rates. Overflow routes through the site for the 100-year storm shall be designed so as to avoid any buildings. Water quality shall not be less than predevelopment storm flow rates and values.

11. Wetland. A Type III palustrine emergent wetland was identified on the site, which is isolated from other surface waters and measures 5,254 sq. ft. As the wetland is located at the intersection of two streets that cannot be relocated, the wetland will be filled and off-site mitigation will be provided in the nearby Roberts plat, which was also developed by CamWest.

12. Wildlife. The wildlife report indicates that the site has the potential to support at least 52 different species of wildlife, but very few were observed on the site. The presence of several large snags are valuable to species which prefer the conifer forest habitat. Applicant proposes to retain as many snags in open space areas as safety and development limitations allow.

13. Geotechnical. The geotechnical report indicates that the site appears generally suitable for development as a residential subdivision.

14. Traffic. Traffic analysis indicates that the proposed subdivision will have a minimal impact on the transportation network within Redmond. To mitigate the substandard level of service at the intersection of NE 116th Street and 172nd Avenue NE, the consultant recommended that it operate as an all-way stop intersection. City staff rejected this mitigation and Applicant will instead be required to construct the additional southbound lane at 172nd Avenue NE. A variance from the 450 stopping sight distance requirement to the available 285 feet will be needed at the south site access.

15. Public Notice and Comment. Public notice of the application and public hearing was given as required by the RCDG. Four comments were received from the public:

- Gerald and Telka Gustafson of 11810 172nd Avenue NE expressed concern for the safety of their well and septic system, responsibility for fencing, and driveway access after a sidewalk was installed in front of their property.
- Lake Washington School District. The School District asked that the City impose and impact fee for school construction in the sum of $3,341.00 per single-family dwelling unit.
- Judith Sheldon of 11604 172nd Avenue NE pointed an error in the identification of her property, and expressed concern for the impact of road improvements on her property.
- Raul Munoz of 17234 NE 115th Street was concerned that metal tags had been attached to trees on his property, that trees on his property were close to the property line and could affect construction of homes on the site, that his private well might be affected by storm drainage, and that 172nd Avenue NE may not be adequate to handle additional traffic.

Munoz was the only member of the public to attend and speak at the hearing. He urged that his well water be tested for quantity and quality prior to any construction to establish a baseline to evaluate construction impacts, and that homes on lots five and six be located away from his trees along his property line. He urged that an arborist be consulted in the matter.

16. Any conclusion of law deemed to be a finding of fact is hereby adopted as such.

From these findings of fact, the Examiner makes the following:

CONCLUSIONS OF LAW

1. Jurisdiction. The Hearing Examiner is authorized to conduct a public hearing and approve an application for Preliminary Plat. The Hearing Examiner is authorized to conduct a public hearing and make a recommendation to the City Council on an application for a PRD.

2. Subdivision Criteria. Subdivision regulations are set forth in RCDG 20D.180. The review and approval criteria are contained in RCDG 20D.180.10-020, as follows:

(1) Each proposed subdivision or short subdivision shall be reviewed to insure that:

(a) The proposal conforms to the goals, policies and plans set forth in RCDG Title 20B;

(b) The proposal conforms to the site requirements set forth in RCDG 20C.30.25-140, Site Requirements;

(c) The proposal conforms to the requirements of this section and those set forth in RCDG Title 20F and submittal requirements on file in the Planning Department;

(d) The proposed street system conforms to the City of Redmond Arterial Street Plan and Neighborhood Street Plans, and is laid out in such a manner as to provide for the safe, orderly and efficient circulation of traffic;

(e) The proposed subdivision or short subdivision will be adequately served with City approved water and sewer, and other utilities appropriate to the nature of the subdivision or short subdivision;

(f) The layout of lots and their size and dimensions take into account topography and vegetation on the site in order that buildings may be reasonably sited and that the least disruption of the site, topography and vegetation will result from development of the lots;

(g) Identified hazards and limitations to development have been considered in the design of streets and lot layout to assure street and building sites are on geologically stable soil considering the stress and loads to which the soil may be subjected.

3. PRD Criteria. A Planned Residential Development (PRD) allows flexibility and variation from established site requirements and development standards to enhance the design of a residential development. The Decision Criteria for a PRD are set forth in RCDG 20C.30.105-040:

(1) Design Criteria. The City may approve, or approve with modifications, a PRD or MPRD if the proposal meets the requirements of this chapter and the design of the proposed development achieves two or more of the following results:

(a) High quality architectural design, placement, relationship or orientation of structures;

(b) Achieving allowable densities for the subject property;

(c) Providing housing types that effectively serve the affordable housing needs of the community;

(d) Improving circulation patterns or the screening of parking facilities;

(e) Minimizing the use of impervious surfacing materials;

(f) Increasing open space or recreational facilities on site;

(g) Landscaping, buffering, or screening in or around the proposed PRD or MRPD;

(h) Providing pubic facilities;

(i) Preserving, enhancing or rehabilitating natural features of the subject property such as significant woodlands, wildlife habitats or streams;

(j) Incorporating energy efficient site design or building features;

(k) Providing for an efficient use of infrastructure.

4. The concerns of the Gustafson's can be satisfied. The condition requiring mitigation for damage to their well assures them of adequate water supply. Their septic system may be

maintained. Fencing is part of the development, an applicant has been encouraged to work with the Gustafson's in the design and construction of the fences. Applicant must construct a sidewalk along NE 172nd Avenue NE, and access to the Gustafson property must be maintained at all times.

5. The request of Lake Washington School District for imposition of an impact fee for schools cannot be granted, as the City of Redmond has not adopted a school impact fee ordinance.

6. The concerns of Judith Sheldon can be met. All road improvements will be within the existing right-of-way, although construction and slope easements maybe needed. It will be applicant's responsibility to obtain any necessary easements.

7. The concerns of Raul Munoz for safety of buildings on Lot 5 & 6 are well founded. His trees are near the property line, and a wind blown tree could cause considerable damage to a nearby residence. A condition requiring consultation with an arborist should be imposed. His request that Lots 5 & 6 be left as open space is unreasonable and should be denied. The condition concerning adverse impacts to wells will assure him of continued water service. His request that his well be test prior to construction is justified, and a condition to such effect should be imposed. The traffic report indicates that 172nd Avenue NE will be adequate to handle the additional traffic.

8. Staff analyzed the decision criteria for the Preliminary Plat and Planned Residential Development on pages 10-30 of the Technical Committee Report, and concluded that with conditions, both should be granted. The Hearing Examiner concurs. The homes will be of varying size and cost and will be of high quality design. More than the minimum percentage of trees will be preserved, and the large open space made possible by the PRD process will provide a pleasing amenity for the residents. Environmental impacts are adequately mitigated. The proposals should be approved.

9. Any finding of fact deemed to be a conclusion of law is adopted as such.

DECISION

The Preliminary Plat of Curry Property is **APPROVED** subject to conditions and subject to City Council approval of the Planned Residential Development.

RECOMMENDATION

The Hearing Examiner recommends **APPROVAL** for the Planned Residential Development for Curry Property.

Done this 14th day of April 2003.

/s/Gordon F. Crandall

GORDON F. CRANDALL
HEARING EXAMINER

Attachment A: Site Plan

Attachment B: Conditions of Approval (with changes in caps, underlined, and in bold)

City of Redmond
Office of the Hearing Examiner
8701 160th Avenue NE
P.O. Box 97010
Redmond, WA 98073-9710

PROCEDURE FOR RECONSIDERATION

Any interested person (party of record) may file a written request for reconsideration with the Hearing Examiner. The request for reconsideration shall explicitly set forth alleged errors of procedure or fact. The final date for motion for reconsideration is **5:00 P.M. on April 28, 2003,** and should be sent to the **Office of the Hearing Examiner**, City of Redmond, MS: PSFHE, 8701 160th Avenue N.E., PO Box 97010, Redmond, Washington, 98073-9710.

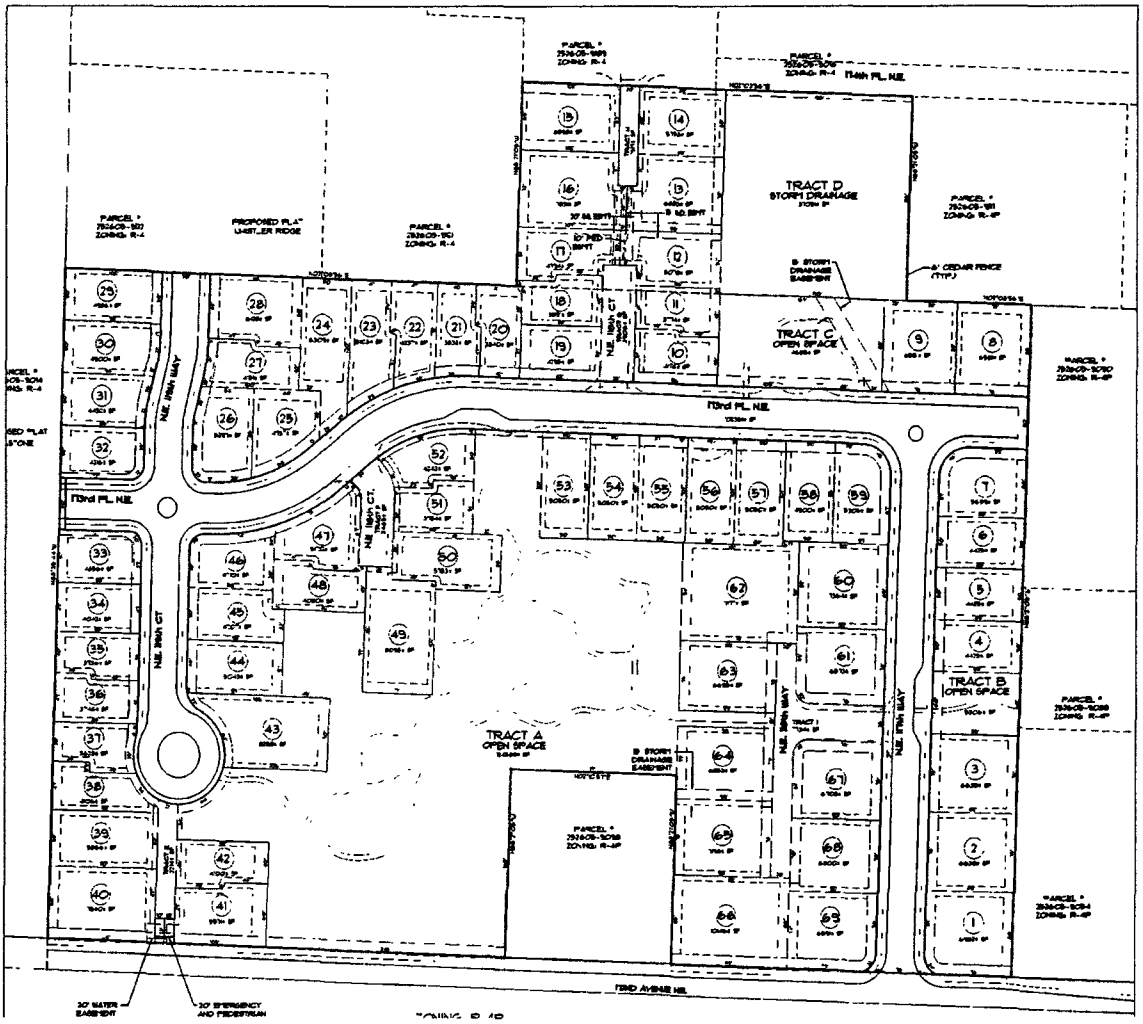
NOTICE OF RIGHT OF APPEAL

You are hereby notified that the foregoing Findings of Fact, Conclusions, and Decisions are the final action on this application subject to the right of appeal to the Redmond City Council. Appeal procedures are governed by RCDG 20F.30.40-110 (Ordinance 2118) to which the reader is referred for detailed instructions. The written appeal must be received by the **Redmond Permit Center** no later than **5:00 P.M. on April 28, 2003, or within 10 business days following final action by the Hearing Examiner if a request for reconsideration is filed.** Please include the application number on any correspondence regarding this case.

The following statement is provided pursuant to RCW 36.70B.130: "Affected property owners may request a change in valuation for property tax purposes notwithstanding any program of revaluation."

ATTACHMENT A

SITE PLAN



ATTACHMENT B
CONDITIONS OF APPROVAL

(Changes are in caps, underlined and in bold)

I. PLANNING REQUIREMENTS

A. SEPA: A Mitigated Determination of Non-Significance was issued for this project. The MDNS was amended to resolve a scrivener's error on March 28, 2003. The following mitigation measures are incorporated into this approval as conditions of approval:

1. 172nd Avenue NE. The applicant is required to construct a second southbound lane on 172nd Avenue NE as it approaches NE 116th Street. This will allow for the separation of southbound turning movements, which will decrease vehicle delay and improve level of service. The new lane is required to have a minimum storage length of 150 feet along with an appropriate transition back to the existing cross section. The traffic consultant reviewed the results of this improvement in the Traffic Impact Analysis. In 2005 with the project traffic and this mitigation, the southbound through movements will operate at LOS-E, with an approach delay of 42.8 seconds. Thus, this measure effectively mitigates the project impact to this movement by returning the level of service and delay to approximately the same as prior to the development. If the reconstruction of the intersection of NE 116th Street and 172nd Avenue NE as part of the planned widening of NE 116th Street is shown to be fully funded as part of the City of Redmond's 2004 Transportation Improvement Program, the City and the project applicant may propose the modification or elimination of this condition.

2. Water System. The project proponent shall mitigate adverse quantity or quality impacts that are demonstrated to have occurred during or within one year of site civil construction to domestic water supply wells on adjacent properties. This mitigation shall be required where it can be demonstrated that the adverse impacts occurred as an apparent result of dewatering of utility trench excavations, surface grading, storm-water collection or runoff of turbid storm-water or contamination caused by spillage and seepage of noxious substances on the site during construction. Each of four adjacent properties is served by its own well, more or less as shown on sheet P3 of the preliminary

PRD drawings dated 3/26/02. These adjacent properties potentially affected are King County tax parcel numbers 252605-9098, 252605-9097, 252605-9088 and 252605-9090. **EACH WELL SHALL BE TESTED PRIOR TO CONSTRUCTION TO ESTABLISH BASELINE CONDITIONS.** Should an impact **TO THE QUANTITY OR QUALITY OF THE WATER** be determined, each impacted property shall be provided with city water service. Water services shall be installed from the main fronting the affected property and meter setters and boxes placed to serve the residence. The water service shall further be extended from the meter box to the house and connection made to the existing plumbing. All work shall be done in accordance with city standards and all applicable codes. Connection, meter installation and reimbursement fees shall be paid to the city.

B. General Planning Requirements:

1. This approval is subject to all general criteria of the Redmond Community Development Guide and Redmond Municipal Code. Refer to Attachment VI.A, General Planning Approval Conditions, for a checklist of drawing, bond, and general planning requirements. The checklist does not substitute for the code; it is intended to be used as a guide in preparing your final construction drawing/building permit submittal. Refer to the Redmond Community Development Guide and Redmond Municipal Code for detailed information on each requirement.

2. To ensure compliance with residential site standards, at the time that construction drawings are submitted for Public Works review, the applicant shall provide two (2) copies of the construction drawings, clearing/grading plan and tree retention plan at a scale of 1" = 20' to the Planning Department.

3. A sign permit application must be submitted separately to the Planning Department for review and approval prior to installation of any proposed signs (RCDG Section 20D.160.10-020).

4. Transportation, parks, and fire impact fees shall be assessed at the time of building permit issuance for each residence. The fee in effect at the time of complete building permit application shall apply.

C. Specific Planning Requirements:

1. Planned Residential Development Approval. The proposal is dependent upon the approval of a Planned Residential Development application. The Hearing Examiner receives testimony and recommends to approve, conditionally approve, modify, or deny the application for Planned Residential Development to the Redmond City Council. The Preliminary Plat shall not be undertaken except in compliance with the approval of a Planned Residential Development application in the same format as those plans dated December 16, 2002.

2. Landscaping:

The landscape plan should include landscaping details for the storm water facility, which will enhance its appearance as a naturally occurring water feature (RCDG Section 20D.40.25-080). The general goal should be to create a varied planting pattern with a diversity of native species that would be found in a palustrine emergent, seasonally flooded (or otherwise inundated) wetland. The planting must be appropriate for the water regime that is anticipated. The design should be done by a qualified wetland consultant or landscape architect with experience in wetland mitigation or planting in wetland areas.

Landscaping shall be coordinated with water/sewer lines and fire hydrants/connections. Trees shall be planted no closer than 8 feet from the centerline of any water/sewer lines. Shrubs shall be planted to maintain at least 4 feet of clearance from the outside edge of the shrub to the center of all fire hydrants/connections. Ground cover may be planted within this radius. (RCDG Section 20D.80.10-150(8)).

Planting shall meet the City requirements for site clearance at intersections as identified in Section 20D.210.25 of the Redmond Community Development Guide. (20D.80.10-150(2))

For any landscaping along 172nd Avenue NE and 174th **PLACE** NE, an irrigation system shall be maintained by the Home Owners' Association or other means

acceptable by the City of Redmond Parks Department. Maintenance of landscaping shall be the responsibility of the Homeowners Association, including that portion

located within the public right-of-way along 172nd Avenue NE and 174th **PLACE** NE. Any installation or other work in the public right of way requires an Extended Right of Way Use Permit issued by the Public Works Department.

Street trees are required as follows (RCDG Section 20D.80.10-140):

Street	Species	Spacing on Center	Notes
172nd Avenue NE	*Cleveland Maples*	*30'*	*Minimum 2.5" caliper. Specimen to be grown for street use.*
Internal Streets	*To be determined.*	*TBD*	*Per Landscaping Requirements. Note: The City does not maintain internal street trees.*

Sensitive Areas:

a. A wetland and buffer enhancement plan shall be submitted with the Construction Drawings. The plan shall meet the requirements of Appendix 20D-2 (V) of the Redmond Community Development Guide.

b. A sensitive areas analysis shall be completed for off-site improvements that extend into areas with potential wetlands or streams. Mitigation will be required where improvements extend into a sensitive area or its buffer and beyond those improvements that currently exist.

c. A split rail fence shall be installed to delineate all sensitive areas and native growth protection area tracts. Sensitive area signage (available from the City of Redmond) shall be installed to provide for notice in the field regarding the presence of sensitive areas. Signage shall be affixed to the fence approximately

on the midpoint of each lot's rear property line. Where fencing does not abut an individual lot, signage shall be placed approximately every 100'. Signage and fencing shall be shown on the construction drawings. Final location and materials will be subject to approval by the Planning Department.

Tree Protection Measures:

d. Existing Significant Trees to Remain, as designated on the proposed Tree Preservation Plan, dated 12/16/2002, shall be saved.

e. Tree preservation measures for trees designated to be saved must at a minimum comply with required tree protection in RCDG Section 20D.80.20-100(1). These measures include but are not limited to the following requirements:

i. All construction activities, including staging and traffic areas, shall be prohibited within five feet of the dripline of protected trees.

ii. Tree protection barriers shall be installed along the outer edge and completely surround the area 5' from the dripline of significant trees to be protected prior to any land disturbance.

iii. Tree protection barriers shall be a minimum of four feet high, constructed of chain link, or polyethylene laminar safety fencing or similar material. "Tree Protection Area" signs shall be posted visibly on all sides of the fenced areas. Signs requesting subcontractor cooperation and compliance with tree protection standards may also be required to be posted at site entrances.

iv. Where tree protection areas are remote from areas of land disturbance, and where approved by the Planning Department, alternative forms of tree protection may be used in lieu of tree protection barriers, provided that protected trees are completely surrounded with continuous rope or flagging and are accompanied by "Tree Save Area-Keep Out" signs.

v. Per RCDG Section 20D.80.20-080(1), each significant tree that is removed on the site must be replaced by one new tree. The required number of replacement trees must be identified on the Tree Replacement Plan. The minimum size of replacement trees is 2-½ -inch caliper for deciduous trees and six to eight feet in height for evergreen trees. **STREET TREES OF THIS CALIPER WILL BE COUNTED AS REPLACEMENT TREES.**

vi. Two copies of the final Tree Preservation Plan, Landscape Plan and Tree Replacement Plans at 1"=20' scale must be submitted with construction drawings and approved prior to issuance of construction drawings. The final plans shall be prepared or approved by a licensed landscape architect, registered Washington certified nurseryman or registered Washington certified landscaper (RCDG Section 20D.80.10-040). This certification shall be noted on all landscape-related plans. A copy of the Tree Preservation Plan shall be recorded with the Final Plat.

vii. Restrictive covenants shall include a statement notifying property owners and the Homeowner's Association that significant and landmark trees on individual lots may only be removed in accordance with the approved tree retention plan. This language shall be reviewed and approved by the Planning Department prior to recording of the restrictive covenants with King County.

viii. A tree health assessment shall be completed for off-site improvements that extend into areas with significant and landmark trees. Mitigation will be required where trees are removed or improvements extend within 5' of the dripline of any healthy, significant or landmark tree, beyond those improvements that currently exist.

Reduction of Front Yard Setback. The proposed reduction in front yard setback to below the required 10' is not approved. The site plan shall be revised such that the 10' front yard setback is met. Impacts to trees resulting from the change shall be mitigated.

II. ENGINEERING REQUIREMENTS

A. No lots shall be permitted direct access to 172nd Avenue NE. The specific lots affected by this restriction shall be listed on the face of the final plat and other documents.

B. Easements & Dedications: Existing and proposed easements and rights-of-way shall be shown on the final plat, civil plans and other documents. Any existing easements for ingress, egress, private utilities, franchise utilities, etc. that lie within the Plat or within rights-of-way adjacent to the Plat shall be released or modified to the City of Redmond's satisfaction prior to final plat approval.

1. Public easements are required as follows:

a) 10-feet wide for sidewalk and utilities adjacent to the right of way along the east side of 172nd Avenue NE.

b) 10-feet wide for sidewalk and utilities adjacent to the right of way along the west side of 174th Place NE.

c) 10-feet wide for sidewalk and utilities adjacent to the rights of way along both sides of the internal plat streets: NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE.

d) 10-feet wide for pedestrians from NE 119th Court across private Tract E to 172nd Avenue NE and from 173rd Place NE across private Tracts G and H to 174th Place NE.

e) Rights-of-way dedicated to the City of Redmond are required as follows: 50 feet wide for the internal plat streets: NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE.

f) Private tracts are required as follows:

(1) 35 feet wide for the internal plat streets within Tracts F, G and I.

(2) 20 feet wide for the internal plat streets within Tracts E and H.

(3) New right-of-way lines joining at intersections shall connect with a minimum of a 25-foot radius, or with a chord that encompasses an

equivalent area. The area formed by this radius or chord shall also be dedicated as right-of-way.

(4) All lots are subject to an easement for utilities and drainage facilities over, under and across a strip of land 2-1/2 feet wide along each side of the interior lot lines within the development, together with a strip of land 5 feet wide along the lot lines around the perimeter of the development.

C. Public and Private Engineering/Transportation Improvements

1. Half street improvements are required on 172nd Avenue NE including asphalt paving 18 feet from centerline to face of curb with appropriate tapers, type A-1 concrete curb and gutter, planter strip, concrete sidewalk, storm drainage, streetlights, street trees, street signs and underground utilities including power and telecommunications. The minimum pavement section for 172nd Avenue NE shall consist of:

a) 4" Asphalt Pavement Cl. A

b) 5" Asphalt Pavement Cl. E

c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTMD 1557)

d) Street crown 2% sloped to drain system

2. Half street improvements are required on 174th Place NE behind the existing curb and gutter including planter strip, concrete sidewalks, street lights, street trees, street signs and underground utilities including power and telecommunications.

3. On 172nd Avenue NE and 174th Place NE the asphalt street shall be planed, overlaid, and/or patched to repair damage done by utility cuts and other work, as determined by the Engineering Division.

4. Sidewalks constructed to City standards are required within the pedestrian easements between private Tract E and 172nd Avenue NE and between private Tracts G and H.

5. Other off-site improvements include widening of 172nd Avenue NE on the southbound approach to NE 116th Street as outlined in the SEPA conditions for this Plat.

6. Prior to the City allowing occupancy of any home constructed within the Curry Property Plat, the developer shall design and construct an interim walkway for school children along the east side of 172nd Avenue NE from the pedestrian connection at Tract E to NE 116th Street, along with other minor improvements at the 172nd Avenue NE/NE 116th Street intersection as needed to ensure safe crossing of these streets. The interim walkway shall be constructed of asphalt or Portland cement concrete. The interim walkway shall be a minimum of 5-feet wide when located adjacent to curb and gutter or other traffic barrier acceptable to the City. The interim walkway shall be a minimum of 4-feet wide and located a minimum of 10-feet from the street edge where no curb and gutter or other traffic barrier acceptable to the City exists. A safety railing or fencing will be required when (1) the interim walkway is located at the top of a slope or wall that is 2:1 or steeper and (2) the walkway elevation is 30-inches or higher than the toe of the slope or wall. This requirement is also a condition for the Wynstone Plat located to the north of the Curry Property. The applicant is encouraged to work with the Wynstone Plat applicant to share the cost of this improvement. For that portion of the safe walking route across Tax Parcel 252605-9098, completion of the curb, gutter and sidewalk is likely the most cost effective alternative.

7. All vehicle use areas including driveways, private streets, service areas, etc. shall be paved.

8. Specific subdivision public street improvement conditions for NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE:

a) Street improvements within the 50-foot wide dedicated right-of-way shall include asphalt paving (28 feet curb to curb), with appropriate tapers, type A-1 concrete curb and gutter, planter strips, street trees, concrete sidewalks, storm sewers, streetlights, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(1) 3" Asphalt Pavement Cl. B

(2) 4" Asphalt Treated Base

(3) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTMD 1557)

(4) Street crown 2% sloped to drain system

(5) The cul-de-sac on NE 119th Court is required to have a minimum radius of 44 feet to the face of curb. A planter island shall be provided in the center of the cul-de-sac to reduce, as much as possible, the amount of asphalt. The maintenance of the landscape in the island shall be the responsibility of the adjacent property owners. This maintenance requirement shall be included on the face of the final plat.

b) Specific short subdivision private street improvement conditions for the internal streets within Tracts F, G and I:

(1) Street improvements shall include asphalt paving (28 feet), with appropriate tapers, thickened asphalt edge or type A-1 concrete curb and gutter, concrete sidewalk (one side), storm sewers, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(a) 2" Asphalt Pavement Class B

(b) 4" Crushed Rock surfacing

(c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTM D 1557)

(d) Street crown 2% sloped to drain system

c) Specific short subdivision private street improvement conditions for the internal streets within Tracts E and H:

(1) Street improvements shall include asphalt paving (20 feet), with appropriate tapers, thickened asphalt edge or type A-1 concrete curb and gutter, storm sewers, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(a) 2" Asphalt Pavement Class B

(b) 4" Crushed Rock surfacing

(c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTM D 1557)

(d) Street crown 2% sloped to drain system

(2) Installation of mailbox stand(s) shall be in accordance with City standards.

d) All power, telephone, streetlights, etc. shall be shown on the engineering drawings and landscape plans submitted for construction permits.

e) A composite drawing that includes all utilities, landscaping including trees, etc., is necessary to minimize the possibility of utilities/landscaping conflicts.

f) Conversion of Aerial Utilities (Power, Telephone, T.V., Etc. to Underground)

(1) All aerial utilities shall be converted to underground along all street frontages and within the plat according to 20D.220.10 "Underground Wiring" in the Redmond Community Development Guide.

D. The applicant shall meet the construction plan and construction requirements in Attachment B, "REQUIREMENTS FOR CONSTRUCTON DRAWINGS" and Attachment C, "GENERAL INFORMATION AND ADMINISTRATION REQUIREMENTS" **from the Technical Committee Report dated March 31, 2003.**

III. UTILITIES REQUIREMENTS

A. Sewer

1. Sewer service will require a developer extension of the City of Redmond sewer system as follows:

a) Construct sanitary sewer improvements more or less as shown on the Preliminary Plat drawings dated December 12, 2002.

b) (The sewer main location shown on the site plan may not conform to City standard location. Revisions to comply with City standard locations may be required.)

2. Vehicular access to all new and existing manholes shall be provided. The access easement shall be a minimum of 20 feet in width with asphalt concrete surfacing. Alternative surfacing may be approved by the City depending upon the location. If access passes through fencing then 14-foot minimum width gates shall be provided. The plat or easement document shall (1) show and dedicate the 20-foot access easement, (2) have covenants advising property owners of their obligation to maintain the availability of the access by providing gates and not obstructing the access, and (3) that the property owners maintain, repair and replace the access surfacing as needed.

B. Water:

1. Water service will require a developer extension of the City of Redmond water system as follows:

a) Construct on-site water improvements more or less as shown on the Preliminary Plat drawings dated December 12, 2002. A 12-inch water main shall be constructed to serve the site in 172nd Avenue NE from NE 116th Street to the northern limits of the plat, more or less as shown on the Preliminary Plat drawings. An 8-inch stub shall be extended across 172nd Avenue NE in the vicinity of NE 117h Street and connected with the existing 8-inch main in that vicinity.

b) (The water main location shown on the site plan may not conform to City standard locations. Revisions to comply with City standard locations may be required.)

IV. CLEARING/GRADING AND STORMWATER MANAGEMENT

A. Erosion control systems must be implemented throughout the construction process and until the site is stabilized. Design of all systems must be in accordance with section 20E.90.10 of the Community Development Guide and the most recent issue of the City of Redmond STORMWATER MANAGEMENT AND EROSION CONTROL TECHNICAL NOTEBOOK

(notebook). Contact the Stormwater Division at 556-2890 for information about, or a copy of, the notebook. Preferred methods for management and control are discussed in the notebook.

B. Stormwater Management

1. Quantity Control

a) In an open pond; provide detention for peak discharge control to match one half of the 2-year and match the 10-year and 100-year storms natural (prior to any development) runoff peak flow rates.

b) Provide for overflow routes through the site for the 100 year storm runoff (100 year flow may not impact any buildings).

2. Quality control. Use a lined, open pond to provide water quality treatment for the runoff from the 6-month, 24-hour design storm event. Use the developed condition land use when determining the water quality storm flow rate and volume.

3. Provide maintenance vehicle access to the pond bottom and outlet control structure from 174th Place NE.

C. Miscellaneous

1. Construction activities may be limited or suspended during the rainy season (October 1 – April 30).

2. Stencil all on-site storm drainage inlets with "DUMP NO WASTE DRAINS TO STREAM". Stencils are available from the Stormwater Division located at the City Annex (phone 556-2840). Design plans shall identify the requirement to stencil drainage inlets. Easements will be required for any public conveyance systems.

3. Trees are not allowed within 8 feet of storm systems.

4. Ponds shall be lined in accordance with the Department of Ecology Stormwater Management Manual for the Puget Sound Basin, (1992).

5. Designate private roads on the construction plans and plat drawings by adding (Private) after the road name.

V. FIRE PROTECTION

A. EMERGENCY VEHICLE ACCESS ROADWAY REQUIREMENTS

1. Emergency vehicle access roadways shall be an unobstructed 20 feet in width and 13' 6" high. Turning radii shall be 25' interior and 45' exterior.

2. Fire lanes shall be located wherever curbs, road edges, or loading areas are adjacent to the 20-foot wide vehicle access roadway. Fire lanes identified through site plan review shall be included on the final civil drawings. Additional fire lanes and marking may be required anytime during the life of the development upon evaluation by and direction of the Fire Marshal. Where fire lanes are a 28 feet wide access tract or easement, the side not used for parking shall be signed "No Parking - this side" or "No Parking –Fire Lane- this side". If the access tract or easement is 20 feet then both sides shall be signed.

3. Driveway entries or curb returns shall be provided to meet minimum roadway radii at all tracts, easements or other intersections. Do not measure into areas where parking is allowed. This includes where Tract E meets 172nd Ave NE.

4. Traffic circles shall not impede into required radii. The circle at NE 119th and Tract E, and at NE 119th and 173rd AVE NE shall be reduced in diameter to allow through movements in both directions.

B. ADDRESSING

1. Each lot shall have the building address numerals installed per the Redmond Fire Department Design and Construction Guide. A nominal 6-inch high numeral shall be used.

2. Approval is required for building and unit addressing.

3. Temporary signs shall be used at the job site as soon as construction begins. Numerals shall be high contrast in color, face the street fronting the property, and be a minimum 6" high.

4. The "T" road labeled NE 118th shall be called 172nd Ct NE and so signed at the intersection with NE 117th Way. Lots 66, 65 and 64 shall be addressed with 117xx, ascending odd numbers. Lots 62 and 63 shall be addressed with 117xx, ascending even numbers.

Working Copy

EXHIBIT A
TECHNICAL COMMITTEE REPORT

MEMO TO: Gordon Crandall, Hearing Examiner

FROM: Technical Committee

DATE: March 31, 2003

PREPARED BY: Geoffrey Thomas, PWS, AICP – Senior Environmental Planner

SUBJECT: Curry Preliminary Plat and Planned Residential Development

LOCATION: The proposal is located north of NE 116th Street on the east side of 172nd Avenue NE. The project site includes property addressed as 11840 – 172nd Avenue NE. The affected tax parcels are 252605-9015, -9058, -9099, and -9124.

REQUEST: The proposal consists of two applications. The requests are:

1. Approve with conditions the **Curry Preliminary Plat,** PPL02-001, as illustrated in the plan set dated December 16, 2002, and
2. Recommend to the City Council to approve with conditions the **Curry Planned Residential Development**, PRD 02-001, as illustrated in the plan set dated December 16, 2002.

EXHIBIT B
ATTACHMENTS

Attachments that are underlined below have been provided to the Hearing Examiner. These exhibits are available for public review at Redmond City Hall. Request file number PRD-02-001, Curry PRD. Dates shown below are the dates that materials were accepted by the Permit Center at the City of Redmond.

I. Application Materials
- a. Application form with Letter Explaining Consistency with PRD Criteria (01/24/02)
- b. Site Plan and Landscaping Drawings (12/16/03 Versions)
- c. Table Identifying the Proposed Variances from Lot Standards (10/10/02)
- d. Arborist Report (10/10/02, Arboricultural Consulting)
- e. Preliminary Stormwater Drainage Report (01/24/02, Core Design)
- f. Landmark Tree Removal Request (10/10/02, CamWest)
- g. Wetland Determination and Conceptual Mitigation (01/15/02, Schulz, Gary)
- h. Conceptual Wetland Mitigation (10/10/02, Schulz, Gary)
- i. Wildlife Study Report (10/10/02, Chad Armour, LLC)
- j. Preliminary Geotechnical Engineering Report (01/24/02, Associated Earth Sciences, INC.)
- k. Traffic Impact Analysis (01/24/02, Garry Struthers Associates, INC.)
- l. Phase I Environmental Assessment (01/24/02, Environmental Associates, INC.
- m. Plat Certificate (01/24/02, Transnation)

II. Notices
- a. Notice of Application
- b. Notice of Public Hearing
- c. Certification of Public Notice
- d. Comment – Gerald and Tekla Gustafson
- e. Comment – Ralph Munoz
- f. Comment – Lake Washington School District
- g. Comment Response to Lake Washington School District

III. SEPA
- a. SEPA Checklist (10/10/02 Version)
- b. Mitigated Determination of Non-Significance
- c. Amended MDNS
- d. Comment – Judith Sheldon

IV. Staff Attachments
- a. General Planning Approval Conditions
- b. General Information and Administration Requirements (Public Works)
- c. Requirements for Construction Drawings (Public Works)

BACKGROUND

Applicant: John Harkness, CamWest
PO Box 676
Kirkland, WA 98083

Processing Dates:

Application Submitted:	01/24/02
Determination of Incompleteness:	02/20/02

Request for Add. Information:	06/12/02
Response Received:	10/10/02
Request for Add. Information:	11/15/02
Response Received:	12/16/02
SEPA Issued (MDNS):	**02/14/03**
Hearing Scheduled:	**03/31/03**

Project review authority and procedures: The application involves two applications. Those applications are a Preliminary Plat and a Planned Residential Development.

Preliminary Plat. The procedures for review of a Preliminary Plat are in Redmond Community Development Guide (RCDG) Section 20F.20.150, Subdivision and Short Subdivision Procedures. The Preliminary Plat is a Type III application[1]. The Hearing Examiner conducts a hearing to receive testimony and makes the final decision for a Type III application.[2]

Planned Residential Development. The procedures for review of a Planned Residential Development are in Redmond Community Development Guide (RCDG) Section 20F.40.90 Planned Developments. The Planned Residential Development is a Type IV application[3]. The Hearing Examiner conducts a hearing to receive testimony and makes a recommendation to the City Council for a Planned Residential Development. The City Council reviews the recommendation and makes the final decision to accept the Hearing Examiner's recommendation.[4]

Technical Committee: The Technical Committee *"shall review all applications...and report its findings, conclusions and recommendations to the appropriate body prior to that authority making its final decision...and shall be responsible for City implementation of the State Environmental Policy Act*

[1] *20F.30.15-040 Classification of Permits and Decisions – Table.*
[2] *20F.30.15-020 (3) Classification of Permits and Decisions.*
[3] *20F.30.15-040 Classification of Permits and Decisions – Table.*
[4] *20F.30.15-020 (4) Classification of Permits and Decisions.*

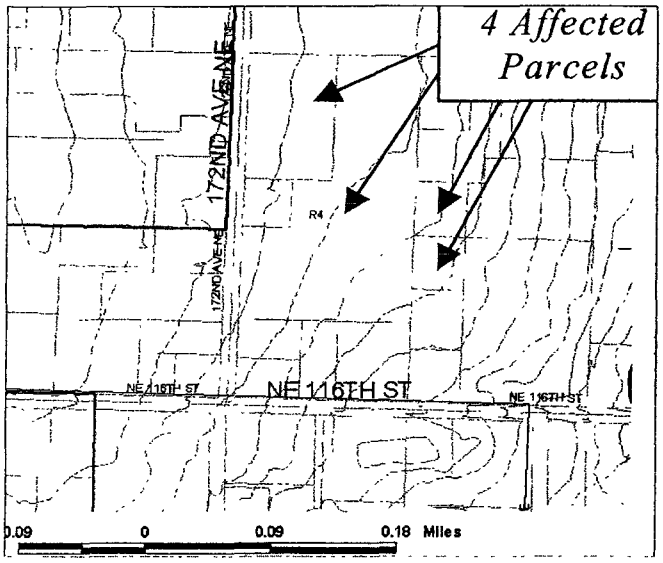
(SEPA) including the assessment of impacts...". In addition, the Technical Committee *"shall act in an advisory capacity to the Hearing Examiner..."*[5]

Hearing Examiner: The Hearing Examiner shall conduct public hearings on behalf of and in some cases make recommendations to the City Council as described in RCDG 20F.30.15, Types of Review[6].

FINDINGS

Project Name: Curry Preliminary Plat and Planned Residential Development

Location: The proposal is located north of NE 116th Street on the east side of 172nd Avenue NE. The project site includes property addressed as 11840 – 172nd Avenue NE. The affected tax parcels are 252605-9015, -9058, -9099, and -9124. (Inset Illustration and Attachment I.A).



Proposal: The applicant proposes the subdivision of approximately 15.68 acres into lots for 69 single-family residential dwellings. The proposal is designed as a Planned Residential Development. The proposal includes construction of related infrastructure ~~including, but not limited to: roads, sidewalks, stormwater facilities, sewer lines, water~~ lines, landscaping, and related mitigation. See inset map, next page.

Project Size: The total area of the site is ***15.68 acres***.

Legal Description: The legal description is found on Attachment I.a.

Neighborhood: The site is in the ***North Redmond Neighborhood***.

Land Use Designation: The land use designation is ***Low-Moderate Density***, as described in Comprehensive Plan Policy LU-117. This designation allows for a residential zoning district with a density of 4 - 6 units per gross acre.

Zoning Designation: The subject property is zoned ***R-4*** (4 units per gross acre).

Surrounding Land Use and Zoning: The site is currently developed with ~~three~~ Two single-family residences and outbuildings. The inset aerial photo illustrates the pattern of development in 1996. Arrows point at the parcels involved in the proposal. Footnotes in Table 1 indicate changes since 1996. Surrounding land use and zoning is as follows:

Table 1: Surrounding Land Use and Zoning

	Zoning	Existing Land Use
North:	R-4	Single-Family Residential.[7]
East:	R-4	Single-Family Residential.[8]
South:	R-4	Single-Family Residential
West:	R-4 (Redmond)[9] R-8 (King Co.)	Single-Family Residential

Access: The Preliminary Plat includes ~~three~~ Four points of access:

(1) 172nd Avenue NE,

(2) A future road connection from Wynstone Preliminary Plat on the northern boundary, and

(3) A new road from Whistler Ridge on the eastern plat boundary.

---

[7] *This property adjoining the northern boundary was recently the subject of the Wynstone Preliminary Plat Approval.*

[8] *Portions of the property adjoining the eastern boundary were recently the subjects of the Whistler Ridge Preliminary Plat Approval.*

[9] *The City limits extends approximately from NE 116th Street northward to a point that would approximate the southern third of the project.*

Vehicle access to the proposed lots would be from an internal street, Road A, except for lots 13, 14, 15, and 16, which use access from 174th Place NE, a road recently constructed as part of the Whistler Ridge development.

Topography: The site is generally flat, sloping from the northwest to the southeast with slopes varying from 2% to 7%. The steepest portion of the site at 7% is in the southeast corner.[10]

Soils/Surface Geology: As identified by the Soil Conservation Services, the soils found on the site are Alderwood.[11]

Vegetation: As illustrated by the inset 1996 aerial photo, the site can be described as approximately 40% pasture grasses, 55% trees, and 5% structures and ornamental landscaping. The trees include Red Alder, Big Leaf Maple, Black Cottonwood, Western Red Cedar, Douglas Fir, and Western Hemlock.[12] Wet soil plants and other shrubs and emergents are identified in the wetland report prepared for the project.

Public Notice: Requirements for public notice are contained in RCDG Section 20G.30.10(1), Notice Requirements. Public notice was given for the project as follows:

Notice of Application: The Notice of Application was posted June 19, 2002 at the site, library, City Hall, post office, and through a mailing to property owners within 500 feet of the subject property, and to those agencies with potential jurisdiction over portions of the proposal. (Attachments III.A).

Notice of Public Hearing: The Notice of Public Hearing was posted at the site, library and City Hall. Notice was mailed to property owners within 500' of the project and to potential agencies with jurisdiction on or before March 17, 2003. Notice was published through a one-time newspaper publication. (Attachments II)

State Environmental Policy Act (SEPA): On February 14, 2003 a Mitigated Determination of Non-Significance (MDNS) was issued. The comment period ended on March 3, 2003 and the appeal period ended March 17, 2003(Attachments III).

Impact Fees: Subdivisions do not vest for the impact fees that exist on the date of Preliminary Plat application or approval. Instead, impact fees for Fire, Transportation, and Park services are collected at the time that a building permit is issued for each house in the proposal. **Fees noted herein are subject to change.**

Fire Impact Fees: The current fee is $94.00 per single-family dwelling unit. However, the fee in effect at the time of building permit issuance shall apply.

---

[10] *SEPA Checklist, Page 2, Environmental Elements – Earth, A and B.*

[11] *Schulz, Gary C., Wetland Determination & Conceptual Mitigation, Curry Property, January 15, 2002.*

[12] *SEPA Checklist, Page 6, Vegetation.*

Transportation Impact Fees: The impact fee varies for projects according to the Transportation Management District in which a project is located. The proposal is located in Area 5, Education Hill. The current fee is $3,064.15[13] per single-family dwelling unit in the District. However, the fee in effect at the time of building permit issuance shall apply.

Park Impact Fees: The current fee is $1,611 per single-family dwelling unit. However, the fee in effect at the time of building permit issuance shall apply.

Public Input: The City of Redmond is responsible for soliciting written public input by means of a "Notice of Application" and "Notice of Public Hearing". Interested parties may further comment on the SEPA threshold determination.

Notice of Application. The City received three comments on the Notice of Application.

1. **Gerald and Tekla Gustafson, November 21, 2002.**[14] The Gustafsons own land located at 11810 – 172nd Avenue NE, which is that parcel that is surrounded by the proposal. The Gustafsons expressed concern regarding impacts to their well, septic system, driveway access when the sidewalk is installed, and fencing.

In responding to the comments, the City has issued an MDNS, in which any demonstrated impacts to the well on this property shall be mitigated by connecting the Gustafson property to public water. The septic system will not be required to be abandoned.

Fencing is permitted as part of the development. Typically fences along property lines are maintained in common by those neighbors sharing the fence, however in some cases private agreements can be reached between neighbors regarding fences. The City encourages the applicant to work with the Gustafsons in the design, construction, and maintenance of any fencing.

The applicant will be required to install a sidewalk from the proposal's northernmost project boundary to 172nd Avenue NE. The City will require that access to the Gustafson's property be properly maintained during and after construction.

2. June 26, 2002, Ralph Munoz. [15] Mr. Munoz lives at 17234 NE 116th Street, which adjoins the proposal's southern property line at the rear of proposed lots 4 and 5 and open space Tract B. Mr. Munoz expressed concern regarding (a) metal tags found on his property that had been placed by surveyors, (b) the impact caused by the proposal on large trees on his property, (c) impacts to his well, and (d) the adequacy of the intersection at NE 116th Street and 172nd Avenue NE.

---

[13] *Sum of Redmond fees (RCDG 20D.210.10-125) and King County fees (RCDG 20D.210.10-127).*

[14] *Attachment II.d.*

[15] *Attachment II.e.*

Tags. Staff contacted Mr. Munoz via phone and provided contact information for the applicant. The applicant discussed the issue of tags on trees on his property. The City requires that trees be located up to 50' from a project boundary. The reason for this is to identify trees where development might be proposed within the tree's drip line. The tags were likely placed as part of this process.

Trees. Houses that would be built in lots 4 and 5 would maintain a 10' setback from Mr. Munoz's northern property line. Further, some trees in the rear yards of lots 4 and 5 would be saved. In relation to the open space tract, structures would not be built within Tract B and three trees within that tract are proposed to be saved. Given the 10' rear yard setback and the preservation of trees along the southern plat boundary and in the vicinity of Mr. Munoz's northern lot line, the City does not believe that the proposal will present a direct hazard to these trees.

Well. Mr. Munoz expressed concern regarding the quality and quantity of water from his well. He expressed particular concern regarding the adequacy of the stormwater system at protecting the aquifer that supplies his well. The City believes that the stormwater system will provide for adequate protection, however it recognizes that unforeseen water quality and quantity impacts can occur with development. Consequently, the City has issued a Mitigated Determination of Non-Significance, which included measures to mitigate for impacts to wells, including that well located on Mr. Munoz's property.

Intersection of NE 116th Street and NE 172nd Avenue. Mr. Munoz expressed concern that the intersection might not be adequate to handle the increase in traffic resulting from the proposal. In a review of traffic generation studies, the Public Works Department determined that improvements were warranted at this intersection. The required improvements were incorporated into the City's Mitigated Determination of Non-Significance for the proposal. The mitigating measure will require that the applicant construct a new southbound lane to accommodate turn movements. The southbound lane will be constructed from the intersection, thence northward for 150'.

3. July 8, 2002, Lake Washington School District. [16] The Lake Washington School District submitted comments requesting that school impact fees be collected for the proposal. The City reviewed the request and responded in a letter dated August 2, 2002[17]. In that response, the City expressed that it was unable to collect school impact fees because the City had not adopted a School Impact Fee Ordinance.

SEPA. The City received one comment on the threshold determination.[18] The commenting party was Judith Sheldon. Ms. Sheldon owns two parcels south of

[16] *Attachment II.f.*
[17] *Attachment II.g.*
[18] *Attachment III.d.*

the Curry proposal and north of NE 116th Street. Both parcels adjoin 172nd Avenue NE.

Ms. Sheldon expressed concern regarding whether the parcels in the MDNS were properly identified for the Utilities mitigating measure. That mitigating measure identifies properties where wells are located and where the applicant would be required to provide public water in the event that wells were adversely impacted by the Curry proposal. In reviewing her comments, the Public Works Department determined that the mitigating measure does in fact mis-identify one of the tax parcels. An amended MDNS[19] was issued to correct this error on March 28, 2003. This amended MDNS represents a modification to correct a typographical error. Given that this amendment does not result in substantive changes, the amended document does not have a comment or appeal period.

Ms. Sheldon further expressed concern regarding road improvements and their impact upon her property. The Public Works Department confirmed that any improvements on 172nd Avenue NE would occur within the right of way for 172nd Avenue NE. In some cases, easements are required for road construction or side slopes. Details regarding necessary easements will become more available as construction drawings are developed for the required road improvements on 172nd Avenue NE. The applicant will be required to work with Ms. Sheldon if any easements are required for construction or side slopes.

ANALYSIS

The proposal requires an approval for a Preliminary Plat and an approval for a Planned Residential Development. A Preliminary Plat and a Planned Residential Development have different criteria that must be considered for their respective approval. The following analysis is consequently divided into two headings: Preliminary Plat and Planned Residential Development.

Preliminary Plat Analysis

To approve a Preliminary Plat, the Hearing Examiner must find that the proposal complies with RCDG 20D.180.[20] Under RCDG 20D.180.10–020-(2), the code states that *"lack of compliance with the criteria set forth in RCDG 20D.180.10-020 (1) shall be grounds for denial of a proposed subdivision ... or for the issuance of conditions necessary to more fully satisfy the criteria."* (Bracketed items added). The following is an evaluation of the proposal's conformance with RCDG 20D.180.10-020 (1).

I. COMPREHENSIVE PLAN POLICIES[21]

Preliminary Plats must comply with the City's Comprehensive Plan. The Land Use chapter of the Comprehensive Plan contains certain policies applicable to all areas within the City and land use designations within the community. The

[19] *Attachment III.c.*

[20] *20F.40.150-050 Preliminary Plat.*

[21] *RCDG 20D.180.10-020 (1) (a)*

policies applicable to this development are listed below. Policies that do not apply to this proposal are not included in this staff report.

Policy Number. *Description*	Discussion	Conform
M. General Land Use Policies: *The efficient use of land is important to limit sprawl, protect rural areas and resource lands, provide for affordable housing, reduce land development costs for businesses and industry and conserve our supply of urban land.*	The City of Redmond has determined through the Comprehensive Plan and subsequent updates that low-moderate density residential is an appropriate designation for this property to meet General Land Use Policy "M". The proposal is contained within a parcel of land that is within the City's corporate limits. The property is not in King County's "Rural Lands". Subdivision of this parcel is consistent with the existing uses developed or permitted to be developed on nearby and neighboring properties.	Yes.
Policy LU-105: *Development regulations, including the allowed density and intensity, should provide for and encourage the efficient use of land.*	The proposal would provide an efficient use of the site by providing the required number of units per RCDG Section 20C.30.25-140, Site Requirements Chart. The minimum number of units for an R-4 district with 15.68 acres is 26 units; the maximum number of units is 63 units.[22] The applicant is proposing 69 by using density bonuses afforded to Planned Residential Developments. While the Planned Residential Development component will be evaluated in the next heading under "Analysis", the proposal complies with LU-105 by providing the minimum density required.	Yes
Policy LU-110: *New development should only be allowed where the City can adequately provide public facilities and services. Capacity should be allocated among all types of uses to meet community goals.*	The Technical Committee has determined that the City can adequately provide public facilities and services as conditioned at the end of this report.	Yes
Neighborhood Vision. *Low-moderate density residential uses are located along NE 116th Street, NE 122nd*	The proposal is located adjacent to 172nd Avenue NE and must conform to this vision statement. The Redmond	Yes

[22] *Core Design, Curry Property Plan Set, P1 of 16, December 16, 2002.*

Street and 172nd Avenue NE.	Community Development Guide defines "R-4" as "low-moderate density". The R-4 zoning district sets a standard of four dwelling units per acre, however, that density can be exceeded through a Planned Residential Development. The proposed Preliminary Plat with increased density through a Planned Residential Development is consistent with "low-moderate" density uses.	
Neighborhood Vision. *Trails used by equestrians, pedestrians and bicyclists take advantage of the area's open space corridors and improved streets.*	The proposal provides for trails within open space tracts. These tracts will be preserved as open space within the Preliminary Plat. The project will further provide pedestrian connections through sidewalks along the property's frontage on 172nd Avenue NE and to adjacent properties.	Yes
N-NR-1: *The North Redmond area shall remain a primarily residential neighborhood.*	The Curry Preliminary Plat proposes 69 single-family residences.	Yes
N-NR-2: *The City should encourage a variety of lot sizes and housing types within this neighborhood.*	Lot sizes will average 5,498 square feet. Lot sizes range from approximately 3,623[23] to 11,177[24] square feet.	Yes
N-NR-3	Relates to supporting Bear Creek neighborhood plan in when planning actions in North Redmond.	N/A
N-NR-4: *In order to create a cohesive and well-designed neighborhood, owners of underdeveloped contiguous parcels should be encouraged to coordinate master planning.*	Two Preliminary Plats have been approved along the eastern and northern plat boundaries. The plat to the East has been constructed. Other Preliminary Plats, farther to the East, have also been approved. The applicants of each of these plats coordinated infrastructure improvements and developed conceptual alignments for connections from the approved plats to properties in the vicinity. The parcels involved in the Curry Preliminary Plat were considered in the coordinated infrastructure planning.	Yes
N-NR-5 through 8	Relate to zoning and re-zoning properties in North Redmond.	N/A
N-NR-9: *Future development shall preserve the area's important natural*	The proposal would create a four open space tracts (approximately	Yes

[23] *Lot 37.*
[24] *Lot 62.*

features.	open space tracts (approximately 4.17 acres).[25] Two of the tracts (approximately 2.9 acres) are proposed for the purpose of low impact recreation and to preserve wooded areas of the site. Additional measures are being employed to preserve both individual trees and stands of trees on the property.	
N-NR-10: *Horsekeeping shall continue to be allowed in low density residential areas. Trails in open space corridors and along setbacks should form a link to regional trails just beyond the neighborhood.*	(1) The proposal is in a low-moderate density area and not subject to the horsekeeping requirement. (2) The trails and sidewalks within the proposal will connect to sidewalks in adjoining subdivisions. These connections will provide residents with opportunities to connect to the regional trail system.	(1) N/A (2) Yes
N-NR-11: *Site design shall respect the natural features of the subarea, such as terraces, ravines, woodlands, streams and wetlands. Open space corridors should create a nearly seamless transition between rural areas and sensitive areas adjacent to developed portions of the neighborhood.*	The site design respects the woodlands located onsite through the preservation of stands of trees in open space tracts and through the preservation of individual trees on individual lots. The open space areas provide for nearly seamless transitions between developed areas of the site and the tracts. A Type III, emergent wetland located on-site will be filled, however off-site mitigation will occur. The fill is necessary as two roads intersect at the location of the wetland.	Yes, with mitigation
N-NR-12: *Trees shall be retained along principal and collector arterials unless their location endangers public safety.*	The proposal preserves stands of trees within the plat. These trees are predominantly within commonly owned tracts or on individual lots. The design has preserved some trees in areas along roadways such as west of Tract D and on the east side of Tract A near lot 50.	Yes

[25] *Core Design, Curry Property Site Plan Set, P1 of 16, December 16, 2002.*

N-NR-13, 14, 15, 16, and 17.	These policies relate to new developments along existing arterials, such as NE 116th Street. N-NR-17 relates to development adjacent to the Sammamish Valley and not the location of this proposal.	N/A
N-NR-18: *Scenic view corridors toward the Cascades and the Sammamish Valley should be preserved. Proposed developments shall have view corridors delineated on Preliminary Plat maps.*	The property is situated on the south and east side of a crown of a hill north of NE 116th Street. The Sammamish Valley is located to the west and there would not be views of that valley. Any views would be toward the Cascades. On site visits by staff, view corridors of the Cascades were not readily apparent. This is likely attributed to the topography, which is fairly level, and the wooded nature of the site. View corridors have not been identified. .	N/A
N-NR-19	This policy relates to development on properties that are rural and large lot residential.	N/A
N-NR-20: *In order to encourage clustering in the Low-Moderate Density Residential areas, a housing density bonus shall be used as an incentive.*	The proposal involves a Planned Residential Development, which includes a density bonus.	Yes
N-NR-21: *Structures shall be clustered so that they maintain significant amounts of contiguous open space.*	The Curry Preliminary Plat will preserve 27% of the total project site as commonly owned open space.[26] This open space includes a 2.86 acre tract of land, Tract A, that will be developed with "low intensity" recreational opportunities such as a trail system, picnic benches, and children's playground. The proposal accommodates the open space through clustering under the Planned Residential Development process.	Yes

[26] *Based on the sum of Tracts A, B, C, and D divided by the gross land area.*

Policy N-NR-22: *The City shall determine the percentage of open space set aside for clustering. The amount of open space should be no less than 25 percent of the site.*[27]	The Curry Preliminary Plat proposal includes 4.17 acres of open space (Tracts A, B, C, and D). This equals approximately 27% of the gross site and exceeds the 25 percent open space requirement	Yes
Policy N-NR-23: *Open space set aside due to clustering should be placed adjacent to open space corridors, parks, sensitive areas, buffers and low-density residential areas.*	Open space is within Tracts and corridors. Tract A, is located central to the subdivision. Tracts B, C, and D are located on the project perimeter and include pedestrian facilities and connections to adjacent properties.	Yes
Policy N-NR-24: *Design of clustered developments should be designed to minimize surface water impacts.*	The proposal will comply with the requirements of applicable stormwater requirements of the City of Redmond Community Development Guide.	Yes
N-NR-25: *The design of clustered developments shall be subject to an administrative review process.*	The proposal is a Planned Residential Development, which is subjected to a hearing process.	N/A
N-NR-26: *Existing rural structures should be retained without affecting the location of the clustering or the area that can be occupied by the cluster.*	The applicant proposed retaining an existing barn, however, due to requirements for providing access to the structure for Fire safety related reasons, the structure is no longer proposed for retention.	Yes
Policy N-NR-27: *Existing significant natural features shall be retained and enhanced. These include steep slopes, wetlands, streams and forested areas.*	The proposal preserves a significant percentage of forested area within tracts and trees on individual lots. A Type III wetland was delineated on-site, however, due to the location of road stubs from the Whistler Ridge (east) and Wynstone (north) Preliminary Plats, the wetland must be filled to accommodate the intersection of these two, established roads. The Sensitive Areas Regulations authorize fill of wetlands under certain circumstances.[28]	Yes, *with mitigation*
Policy N-NR-28: *Redmond's*	As noted in N-NR-27, a Type III	Yes

[27] *This policy requirement of 25% open space is also a code requirement for PRDs, see RCDG 20C.70.30-040.*

[28] *20D.140.10-140 Alteration or Development of Sensitive Areas – Standards and Criteria.*

sensitive area ordinance shall be enforced. Due to severe natural limitations, steep or erodible slopes, wetlands, wetland buffers, flood plains and stream corridors should remain undeveloped and undisturbed.	wetland is proposed for fill due to the location of road stubs from adjacent properties. The proposal provides mitigation, consistent with the Sensitive Areas Ordinance.	
N-NR-29	This policy relates to Bear and Cottage Creeks, which are located approximately one mile from the site.	N/A
N-NR-30: *Development should provide for connecting significant wildlife habitat into protected wildlife corridors.*	The proposal clusters development to retain significant portions of the site in uninterrupted tracts of wooded land. As adjacent properties develop to the south and to the west, the City will work with those applicants to connect to Tract A and Tract B to enhance wildlife use of Tract A.	Yes
N-NR-31: *When more than 50% of wooded portions of the site must be cleared, a plan for re-vegetation, superior to existing conditions, should be implemented.*	The proposal provides for a landscaping plan to enhance the wooded areas of the site with evergreen and deciduous trees.	Yes
N-NR-32	Relates to the purchase of land for parks properties.	N/A
N-NR-33: *A multi-purpose trail system should be developed which links residential areas with open spaces, parks, schools, stables and other recreational areas.*	A multi-purpose trail system is proposed along the frontage of NE 116th Street that will include a 10' wide concrete path and 6' wide soft surface trail. The trails will link the proposed plat with other uses and recreational opportunities in the area. A pedestrian connection is proposed to link the proposal to adjacent developments, which will provide access to these regional trails.	Yes
N-NR-34: *Adequate rights-of-way should be provided for trail use in accordance with City plans when development of property occurs.*	The City trails map illustrates a trail system on 172nd Avenue NE, however the trail is on the west side of the right-of-way, which is on the opposite side of 172nd Avenue NE from the proposal. The right-of-way referred to under this policy is not	N/A

	required for this proposal.	
N-NR-35	Requires the City to create a Parks and Recreational Plan for North Redmond.	N/A
N-NR-36: *New subdivisions shall result in attractive, safe places to live.*	The Planned Residential Development includes elevations for structures. The Planning Department has reviewed the elevations and determined that they meet the requirements[29] of the City's design requirements and fulfill N-NR-36.	Yes
N-NR-37: *Proposed housing developments in the area should be appropriate to the needs and desires of individuals employed in and around Redmond.*	The proposal provides for a mix of housing and property sizes and anticipated market values. In their submittal of May 14, 2002, the applicant describes home styles as ranging from 1600 to 3500 square feet on lots from 3400 to 9000 square feet. Housing prices are expected to range from $350,000 to $600,000 in 2002 "dollars". The price range provides for a range of housing opportunities based upon cost. The range in square footage will serve a variety of housing desires, such as smaller houses for those who do not desire the upkeep of larger structures. The range in lot sizes, accompanied by the open space tracts, will serve a variety of desires for private space, such as smaller lots for those who do not desire the upkeep of larger lots. The proposal is expected to provide opportunities for housing that will fulfill N-NR-37.	Yes
N-NR-38 and 39	Relate to the City encouraging clustered and Planned Residential Developments. This is done through regulation. The policy is not within the applicant's ability to satisfy.	N/A

[29] *RCDG 20D.40.*

N-NR-40, 41, and 42	Relate to the City developing transportation and traffic studies for the neighborhood as a whole. Although the applicant has produced project-specific studies, the policy is not within the applicant's ability to satisfy.	N/A
Policy N-NR-43: *New local and neighborhood collector streets shall be limited to two lanes with additional turn lanes where necessary.*	Local access streets within the plat are limited to two lanes. The Transportation Division has determined that turn lanes are not warranted for streets within the plat.	Yes
N-NR-44: *All new local and neighborhood collector streets shall be built at the minimum allowable width in order to preserve the area's character, protect sensitive areas and reduce stormwater runoff.*	Local streets within the proposed subdivision will be constructed at a minimum allowable width of 28 feet with neck-downs to 20 feet in appropriate locations.	Yes
N-NR-45: *New streets and roads should follow, when possible, the natural topographic contours of the land.*	The site is fairly level.	Yes
N-NR-46: *Traffic-calming techniques should be used to slow through residential traffic. Connecting 172nd Avenue NE road segments should be contingent on implementing such traffic-calming methods.*	(1) The proposal includes traffic calming, such as a bulb-out near Tract B and a traffic circle at the intersection of NE 119th Street with 173rd Place NE. (2) Relates to extending 172nd Ave NE.	(1) Yes (2) N/A
N-NR-47	Relates to lighting near agriculture, rural and large lot residential.	N/A
N-NR-48	Encourages the City to consider different curbs and sidewalks. This policy is not within the ability of the applicant to satisfy.	N/A
N-NR-49	Relates to trail systems along existing roadways. Although impact fees may aid in funding construction of these facilities, the applicant is not required to physically construct portions of the trails.	N/A
N-NR-50	Relates to Annexations by the City.	N/A

N-NR-51: *New development shall fund public facility improvements necessary to serve growth.*	The applicant will be funding the construction of public facility improvements including water, sewer, stormwater, and street improvements. The applicant will also be assessed park, fire, and traffic impact fees in accordance with RCDG Section 20D.60, Impact Fees.	Yes
N-NR-52	Encourages property owners to form Local Improvement Districts.	N/A
N-NR-53: *The City shall require public sewers for wastewater collection in urban areas designated for one to four dwelling units per acre.*	The proposed subdivision will provide a public sewer system for wastewater collection, in compliance with City standards.	Yes
N-NR-54, 55, 56, 57, 58, 59, and 60	Relate to the extension of public facilities (sewer and water) into the North Redmond neighborhood. The applicant will extend public water and sewer to the project site. Other aspects of these policies are more directed toward City staff.	N/A

The proposal conforms to the Redmond Comprehensive Plan. This is a requirement under the Redmond Community Development Guide's Subdivision Chapter[30] and North Redmond Neighborhood Chapter[31].

II. SITE REQUIREMENTS

The second decision criteria[32] for approving a Preliminary Plat is that it must *"conform to the site requirements set forth in RCDG 20C.30.25-140, Site Requirements."* In evaluating site requirements, the Technical Committee is required to consider zoning requirements, sensitive areas, tree protection, and other similar design standards. The Technical Committee has found that the proposal is in substantial conformity with these design requirements. The following is a detailed discussion of design requirements and sensitive areas.

A. LOT DIMENSIONS AND PLAT DENSITY

[30] *RCDG 20D.180.10-020 (1) (a)*
[31] *RCDG 20C.70.30-030.*
[32] *RCDG 20D.180.10-020 (1) (b)*

1. Allowable Density: The maximum number of dwelling units permitted on a site equals the gross site area, multiplied by the maximum number of dwelling units allowed per gross acre. RCDG Section 20C.30.105-050(2), Modification of Development Regulations. Allowed density for the proposal is calculated as follows:

Total Site Area (Acres)	15.68 Acres
Multiplied by the Maximum units/acre	4 Units per Acre
Maximum Units Allowed	**63 Units**

Through the Planned Residential Development process, the applicant can increase the number of units by an additional 10%[33], which would be six additional units. The proposal includes this 10% and arrives at a total unit count of 69 units.

The Preliminary Plat can be approved with the condition that the number of lots is contingent upon the City Council approving the Planned Residential Development. If not approved, the number of units will need to be reduced to 63.

2. Minimum Required Density: The minimum number of dwelling units required for a site is equal to the net acreage (gross site area less sensitive areas, common utilities areas, access corridors and right-of-ways) multiplied by 80%. The minimum required density for the proposal is calculated as follows:

Total Site Area (Acres)	15.68 Acres
Less surface water retention areas, open space areas	- 4.17Acres
Less road dedication, utilities, and access areas	- 2.78 Acres
Total Net Acreage	8.73 Acres
Multiplied by the Maximum units/acre	4 Units per Acre
	35 Units
Multiplied by 80%	0.80
Total Minimum Units Required	**28 Units**

The proposal exceeds the minimum number of units required by code.

3. Minimum Average Lot Size: The RCDG allows a Preliminary Plat to have a range of lot sizes, provided the total of the lot areas meets a minimum "average lot size." The Minimum Average Lot Size requirement for the R-4 zone is 7,000 square feet. The average lot size proposed is 5,498 square feet, which is below the requirement.

Through the Planned Residential Development Process, the proposal can be approved with 5,498 square feet. RCDG 20C.30.105-050 (4) removes the required average lot size. The Preliminary Plat can be approved with the condition that the

[33] *RCDG 20C.30.105-050 (2).*

average lot size is contingent upon the City Council approving the Planned Residential Development. If not approved, the average lot sizes will need to be increased.

4. Minimum Lot Width Circle: The standard minimum lot width circle requirement for the R-4 zone is 40-feet in diameter. However, in a Planned Residential Development, the lot width circle may be reduced to 20 feet. The applicant has illustrated this 20' diameter circle on Sheet P1 of 16, December 16, 2002 submittal.

   The Preliminary Plat can be approved with the condition that the action on the Preliminary Plat is subject to the City Council's approval of the Planned Residential Development.

5. Minimum Lot Frontage: The minimum lot frontage for the R-4 zone is 20 feet as defined in RCDG Section 20C.30.25-140, Site Requirements Chart. The proposal would apply a 20' lot frontage for all lots, except for lots 17 and 48 where an 11' and 9' frontage is proposed. This reduction can be allowed, if approved by the City Council, under RCDG 20C.30.105-060 (2).

6. Site Standards: The current site standards as outlined within RCDG Section 20C.30.25-140, Site Requirements Chart, for the R-4 zone are as follows:

1. Front Building Setback	15 ft. w/ 18 ft garage setback
PRD Allows:	10'
Applicant Proposes:	10' w/ 18' garage setback 5' for Lots 20 and 53 only

The proposal would apply a 5' front yard setback for lot 20 and 53 for preserving trees. This reduction can be allowed under 20D.80.20-070 Tree Protection Standards subsection (1) (b) where significantly more than 35% of trees are protected. The proposal saves only the minimum 35%; therefore the setback for these lots cannot be reduced. A condition of approval should state that the minumum front yard setback for all lots shall be 10' with the 18' garage setback.

2. Side/Interior Setback (each side)	5 ft. and 10 ft.
PRD Allows:	Not Specified.
Applicant Proposes:	5 ft.
3. Side Street Setback	15 ft.
PRD Allows:	10 ft.
Applicant Proposes:	10 ft.
4. Rear Setback	10 ft.
PRD Allows:	10 ft.

	Applicant Proposes:	10'	
5.	Maximum Height of Structures		35 ft.
	PRD Allows:	45 ft.	
	Applicant Proposes:	35 ft.	
6.	Minimum Building Separation		10 ft.
	PRD Allows:	10 ft.	
	Applicant Proposes:	10 ft.	
7.	Maximum Lot Coverage for Structures		40%[34]
	PRD Allows:	40%	
	Applicant Proposes:	40%	
8.	Maximum Impervious Surface Area	60%	
	PRD Allows:	~~60%~~ 70%	
	Applicant Proposes:	(40%) 70%	
9.	Minimum Open Space	20%	
	PRD Allows:	20%	
	Applicant Proposes:	27%	

The applicant proposes modifications to some standards. These modifications to the dimensional standards for lots can only be approved if the City Council approves the Planned Residential Development. The Preliminary Plat should be conditioned upon the City Council's approval of the Planned Residential Development Application.

B. STREET AND UTILITIES IMPROVEMENTS

Site Access: The Preliminary Plat includes three accesses:

(1) 172nd Place NE,

(2) A future road connection from Wynstone Preliminary Plat on the northern boundary, and

(3) A new road from Whistler Ridge on the eastern plat boundary.

Vehicle access to the proposed lots would be from an internal street, Road A, except for lots 13, 14, 15, and 16, which use access from 174th Avenue NE, a road recently constructed as part of the Whistler Ridge development.

Street Improvements: Street improvements, within the 50-foot wide dedicated right-of-way of Road 'A', shall include asphalt paving from curb to curb, concrete curb and gutter, planter strips, concrete sidewalks, storm sewers, street lights, street signs, and underground utilities

[34] *R-5 zone requirement, as allowed by the cluster subdivision process*

including water, sewer, power, and telecommunications. Half-street improvements will be required on 172nd Avenue NE and 174th Place NE. Details regarding street improvements are shown as Recommended Conditions of Approval.

Stormwater: Stormwater runoff from the site will be collected in a series of catch basins and routed via an underground storm sewer conveyance system into an open-surface detention and water quality pond at nearly the midpoint of the eastern plat boundary. Details regarding stormwater requirements are shown as Recommended Conditions of Approval and on the associated site plans.

Sanitary Sewer: The proposal will serve all new homes within the development with a sanitary sewer collection system. A sanitary sewer collection system will be extended into the proposal from NE 117th Street (Whistler Ridge Plat) by the applicant.

Domestic Water. A domestic water supply system will be extended from the intersection of NE 116th Street with 172nd Avenue NE by the applicant. Water service to individual lots will be provided through the roadways, public/private easements, and utility tracts within the proposed plat.

C. NATURAL FEATURES & SENSITIVE AREAS

Tree Retention Requirements: The Redmond Community Development Guide requires that all healthy landmark trees and 35% of all healthy significant trees be saved[35]. Landmark trees are those trees that are greater than 30" in diameter at breast height. Significant trees are those trees that are between 6" and 30" in diameter at breast height. Tree health was assessed in an arborist's report (Attachment I.c.). The Curry proposal includes measures to protect 35% (196) of healthy existing trees on-site. An additional 7.9% (44) of the total trees will be retained on-site, however impacts may occur within the root protection zone.

The applicant is requesting, however, to either remove or impact the root zone of 24 landmark trees. The applicant applied for an exception to the prohibition from landmark tree removal. The Technical Committee has reviewed this request of October 7, 2002, and approved the removal and proposed mitigation.

Trees would be saved in a combination of Native Growth Protection Area Tracts and on individual lots. For trees on individual lots, purchasers of lots would be placed on notice by a recorded tree preservation plan and other recorded documents, such as Covenants and Restrictions. Trees within sensitive areas and their buffers and also trees in recognizable "stands" would be saved in Native Growth Protection Area Tracts, which would be delineated with a combination of a split rail style fence and signage. The Tract's ownership would be with a Homeowners' Association or other party acceptable to the City.

[35] *A "saved" tree is a tree where encroachments do not occur within 5' of a tree's dripline.*

Sensitive Areas Ordinance (SAO): The RCDG contains standards that regulate development impacts to wetlands, flood hazards, geologic hazards, aquifer recharge areas, stream corridors, and wildlife habitat (RCDG 20D.140). The following sensitive areas are located on this site: Class III wetland. The inset map illustrates approximate locations of the wetland, stream, and flood plain sensitive areas. Descriptions of these areas follow.

1. Wetlands: A Type III palustrine emergent wetland was delineated on the property.[36] This wetland is hydraulically isolated from other surface waters and measures 5,254 square feet. The wetland is located at the intersection of 173rd Place NE and NE 119th Way. This intersection cannot be avoided as the stubs for the roads were established by previous plats. At the time that the stubs were set, the City did not have the benefit of a wetland delineation on the Curry property.

   The Redmond Community Development Guide allows the fill of Type III wetlands where there are not reasonable alternatives to avoid the fill.[37] Due to the lack of adequate water availability on-site, the applicant proposes off-site mitigation on the southern portion of the Roberts Plat. The Roberts Plat is a project located on the south side of NE 116th Street, west of Einstein Elementary. The plat was developed by CamWest, the applicant. CamWest has the ability to perform the off-site mitigation on this property.

   The applicant's consultant provided conceptual information to support the off-site mitigation.[38] The conceptual mitigation plan demonstrates that the off-site mitigation is appropriate given the unique circumstances associated with the Curry proposal. A more detailed mitigation plan will be required with construction drawings.

2. Geologic Hazard Areas: None identified.

3. Wildlife Habitat: None identified.

4. Streams: None identified.

5. Shorelines: This site is not within the jurisdiction of the Redmond Shoreline Master Program

6. Flood Hazards: None identified.

7. Aquifer Recharge Areas: The site is located within a Low Significance Aquifer Recharge Area. The proposal is compatible with this classification of aquifer.

D. PARKS & RECREATION

---

[36] *Schulz, Gary C., Wetland Determination and Conceptual Mitigation, Curry Property, January 15, 2002.*

[37] *20D.140.10-180 Alteration of Wetlands.*

[38] *Schulz, Gary C., Conceptual Wetland Mitigation Plan, Curry Property, October 10, 2002.*

The Puget Sound Electric Powerline Trial is located approximately one mile south of the proposal. This trail provides users with opportunities to connect to the regional trail and parks system. A temporary pedestrian connection from the plat's frontage to NE 116th Street will facilitate trail use by residents. The Trails Plan illustrates a trail on the west side of 172nd Avenue NE in the future.

III. SUBMITTAL REQUIREMENTS.

The third requirement for approving a Preliminary Plat is that a proposal conform "to the requirements of this section and those set forth in RCDG Title 20F and submittal requirements on file in the Planning Department."[39] These requirements reflect procedural issues including submittal requirements, providing notices, receiving comments, making a SEPA threshold determination, and holding a public hearing. Compliance with these requirements has been demonstrated throughout this report.

IV. STREET SYSTEM

The fourth requirement to approve a Preliminary Plat requires that *"the proposed street system conforms to the City of Redmond Arterial Street Plan and Neighborhood Street Plans, and is laid out in such a manner as to provide for the safe, orderly and efficient circulation of traffic..."*.[40] The proposed street system conforms to the Transportation Circulation Plan for the North Redmond neighborhood.

V. WATER AND SEWER

The fifth requirement to approve a Preliminary Plat requires that *"the proposed subdivision ... will be adequately served with City approved water and sewer and other utilities appropriate to the nature of the subdivision ..."*.[41] The Technical Committee has determined that the proposed subdivision can be served by extending a water line from the intersection of NE 116th Street and 172nd Avenue NE to the plat. Sewer can be provided by connecting at 119th Way NE.

VI. LOT LAYOUT

The sixth requirement to approve a Preliminary Plat requires that the lot layout, site characteristics (e.g. trees, sensitive areas, etc.), and topography is appropriate for the site and fulfills.[42] The previous assessment under "II" illustrates that the proposal meets this requirement.

---

[39] *RCDG 20D.180.10-020 (1) (c)*
[40] *RCDG 20D.180.10-020 (1) (d)*
[41] *RCDG 20D.180.10-020 (1) (e)*
[42] *RCDG 20D.180.10-020 (1) (f)*

VII. IDENTIFIED HAZARDS

The seventh requirement to approve a Preliminary Plat requires that the general layout does not result in conflicts between the proposed use and identified hazards.[43] After review of sensitive areas related material associated with the project, the Technical Committee has not located any hazards or limitations that would impact the proposed design of the streets and lot layouts. The applicant has applied a subdivision design that minimizes conflicts between those hazardous areas (such as steep slopes) and the proposed lots and infrastructure.

Planned Residential Development Analysis

The following is an analysis of the proposal's compliance with the City's Planned Residential Development decision criteria.[44] To reduce duplication and where appropriate, reference has been made to earlier sections of this report. The Hearing Examiner will review this analysis, consider testimony related to the PRD proposal, and make a recommendation to City Council. City Council is the decision-making body for the Planned Residential Development application.

(1) Design Criteria. The City may approve, or approve with modifications, a PRD or MPRD if the proposal meets the requirements of this chapter and the design of the proposed development achieves two or more of the following results:

Requirement	Discussion	Conform
(a) High quality architectural design, placement, relationship or orientation of structures;	The proponent submitted elevations for the proposed structures and identifed on site plans the location and orientation of proposed structures. In reviewing the material, the Technical Committee has determined that the proposed designs and placement of structures meet the requirement for high quality architectual design, placement, and relationship or orientation of structures. Copies of the elevations will be presented at the hearing on March 31, 2003.	Yes
(b) Achieving allowable densities for the subject property;	In some cases, sensitive areas or other site characteristics may make it difficult for an applicant to achieve allowable densities under the applicable zoning district. This is not the case for this application. A PRD is not required to meet allowable densities for this subject property.	N/A
(c) Providing housing types	Although not providing specifically for	N/A

[43] *RCDG 20D.180.10-020 (1) (g)*
[44] *20C.30.105-040 Decision Criteria.*

that effectively serve the affordable housing needs of the community;	"affordable housing", the proposal includes a range of housing and lot sizes. Typically, a range of sizes allows for greater diversity in a neighborhood, those allowing more affordable and less affordable housing to be located in the same neighborhood.	
(d) Improving circulation patterns or the screening of parking facilities;	The proposal would result in appropriate neighborhood circulation, including connections to each of the plat boundaries. However, the PRD is not necessary to provide these connections.	N/A
(e) Minimizing the use of impervious surfacing materials;	As compared with a more traditional Preliminary Plat, the proposal minimizes the amount of impervious surfacing that would otherwise occur. In a more traditional subdivision, less open space would exist as the parcels would be developed more uniformly with lots. This would require additional road surfacing, which is not required by the proposal.	Yes
(f) Increasing open space or recreational facilities on-site;	By applying the flexiblity authorized in a PRD, the proposal creates a large open space tract, Tract A. This large tract does not commonly occur in typical plats. The open space tract will allow for tree preservation, general open space, and recreational opportunities that will be unique and provide for a positive benefit to the community. Additional tracts (Tracts B, C, and D) are providing for additional open space opportunities as well.	Yes
(g) Landscaping, buffering, or screening in or around the proposed PRD or MPRD;	Tract A provides for signficant screening of the development from 172nd Avenue NE.	Yes
(h) Providing public facilities;	Aside from the significant amount of open space, unique public facilities are not part of this proposal.	N/A
(i) Preserving, enhancing or rehabilitating natural features of the subject property such as significant woodlands, wildlife habitats or streams;	Through open space tracts A, B, and C, the proposal provides for significant preservation of existing stands of trees. Although trees will be removed as part of the development, the remaining stands of trees will be enhanced through tree plantings.	Yes
(j) Incorporating energy efficient site design or building features;	Retaining continuous open space areas will influence the microclimate within the proposal. The microclimate will help cool structures in the summer.	Yes

(k) Providing for an efficient use of infrastructure.	The proposal makes for efficient use of infrastructure by clustering development along its streets. In a more traditional layout with less open space and larger lots, longer lines of utilities and roads would be required to accommodate more of the site being developed.	Yes

In addition to meeting two of the above criteria, the following criteria shall be met:

(2) Public Facilities. The PRD or MPRD shall be served by adequate public facilities including streets, bicycle and pedestrian facilities, fire protection, water, storm water control, sanitary sewer, and parks and recreation facilities.	The proposal will provide the required public facilities.
(3) Perimeter Design. The perimeter of the PRD or MPRD shall be appropriate in design, character and appearance with the existing or intended character of development adjacent to the subject property and with the physical characteristics of the subject property.	In assessing this, it is important to understand the pattern of development adjacent to the project. The properties to the east are currently under development to single-family detached dwellings on "clusterd" lots. Many of these lots involve modified side yard setbacks that result in approximately 10' of separation between structures. The proposal would be consistent with development to the east. The property to the north has been approved for residential, single-family units as well. These units, however, will use the standard side yard setbacks, which will result in 15' of separation between structures. This is slightly different than the 10' between structures that the PRD proposes. However, the proposal would be compatible with the development approved for the property to the north. The properties to the west and across 172nd Avenue NE are lower density, single-family residences. Lots are over ½ acre in size. The PRD has some frontage on 172nd Avenue NE, but a large amount of the frontage is Tract A, which is the open space tract. The proposal is expected to be consistent with existing and planned development patterns. The properties to the south are gennerally

	single-family residences on parcels of over ½ acre. These parcels can be developed to the same R-4 density, however until that occurs, they are lower density parcels. The proposal responds to the existing conditions by retaining trees in Tract B and in the rear yards of lots 4, 5, and 6.
(4) Open Space and Recreation. Open space and recreation facilities shall be provided and effectively integrated into the overall development of a PRD or MPRD and surrounding uses.	The proposal does well at integrating the proposal with its open space tracts. A trail system and other recreational opportunities are proposed within Tract A and C. A pedestrian connection is proposed in Tract B. Finally, Tract D, stormwater drainage, is proposed to be constructed to appear as a naturally occuring wetland. The facilities are available to all residents and, particularly Tracts A, and C/D are closely associated with many of the lots.
(5) Streets and Sidewalks. Existing and proposed streets and sidewalks within a PRD or MPRD shall be suitable and adequate to carry anticipated traffic within the proposed project and in the vicinity of the subject property. (Ord. 1901)	The Public Works Department has reviewed the proposal and found that the proposed accessways are not substandard and will adequately accommodate the anticipated usage.

The proposal uses the PRD process to vary dimensional standards, as identified in earlier sections of this report. In short, the applicant requests variations from average lot sizes and setbacks. Additional information is in the Variance Table, which is attached to the application.

After reviewing the above decision criteria for PRDs, the Technical Committee finds the proposal in conformity with 20C.30.105, Planned Residential Developments.

CONSISTENCY WITH DEVELOPMENT REGULATIONS AND SEPA

In addition to compliance with RCDG 20D.180.10, when the City receives a permit application, RCDG Section 20G.40, Consistency with Development Regulations and SEPA, requires that it determine the project's consistency with development regulations, Comprehensive Plan policies, and the City's SEPA ordinance. In doing so, the City must consider the following:

A. *Consistency with development regulations, such as adequate provision of infrastructure.*

B. Consistency with SEPA, including the City's SEPA policies and regulations, whether additional studies are required to analyze environmental impacts and whether additional mitigation measures are required.

C. Adequacy of the analysis of environmental impacts under existing regulations, such as whether impacts are adequately addressed by development regulations, policies and other laws, including the laws of other agencies.

With the project conditioned, the City determined that:

A. The proposal is consistent with the regulations and policies of the City, including the SEPA ordinance, and the laws and rules of other agencies.

B. The proposal adequately addresses probable adverse environmental impacts under existing regulations and policies.

C. Adequate infrastructure will be provided (i.e. street, storm, water, and sewer extensions) to serve the project.

D. Wetland determination, Geotechnical and soils reports were required to analyze environmental impacts.

E. Environmental impacts are adequately mitigated.

RECOMMENDATIONS

Prior to hearing public testimony, it is recommended that the Hearing Examiner:

1. Approve the **Curry Preliminary Plat,** PPL02-001, as illustrated in the plan set dated December 16, 2002,

2. Recommend to the City Council to approve the Curry Planned Residential Development, PRD 02-001, as illustrated in the plan set dated December 16, 2002, and

both subject to the conditions below:

I. PLANNING REQUIREMENTS

A. SEPA: A Mitigated Determination of Non-Significance was issued for this project. The MDNS was amended to resolve a scrivener's error on March 28, 2003. The following mitigation measures are incorporated into this approval as conditions of approval:

1. 172nd Avenue NE. The applicant is required to construct a second southbound lane on 172nd Avenue NE as it approaches NE 116th Street. This will allow for the separation of southbound turning movements, which will decrease vehicle delay and improve level of service. The new lane is required to have a minimum storage length of 150 feet along with an appropriate transition back to the existing cross section. The traffic consultant reviewed

the results of this improvement in the Traffic Impact Analysis. In 2005 with the project traffic and this mitigation, the southbound through movements will operate at LOS-E, with an approach delay of 42.8 seconds. Thus, this measure effectively mitigates the project impact to this movement by returning the level of service and delay to approximately the same as prior to the development. If the reconstruction of the intersection of NE 116th Street and 172nd Avenue NE as part of the planned widening of NE 116th Street is shown to be fully funded as part of the City of Redmond's 2004 Transportation Improvement Program, the City and the project applicant may propose the modification or elimination of this condition.

2. Water System. The project proponent shall mitigate adverse quantity or quality impacts that are demonstrated to have occurred during or within one year of site civil construction to domestic water supply wells on adjacent properties. This mitigation shall be required where it can be demonstrated that the adverse impacts occurred as an apparent result of dewatering of utility trench excavations, surface grading, storm-water collection or runoff of turbid storm-water or contamination caused by spillage and seepage of noxious substances on the site during construction. Each of four adjacent properties is served by its own well, more or less as shown on sheet P3 of the preliminary PRD drawings dated 3/26/02. These adjacent properties potentially affected are King County tax parcel numbers 252605-9098, 252605-9097, 252605-9088 and 252605-9090. Should an impact be determined, each impacted property shall be provided with city water service. Water services shall be installed from the main fronting the affected property and meter setters and boxes placed to serve the residence. The water service shall further be extended from the meter box to the house and connection made to the existing plumbing. All work shall be done in accordance with city standards and all applicable codes. Connection, meter installation and reimbursement fees shall be paid to the city.

B. General Planning Requirements:

1. This approval is subject to all general criteria of the Redmond Community Development Guide and Redmond Municipal Code. Refer to Attachment VI.A, General Planning Approval Conditions, for a checklist of drawing, bond, and general planning requirements. The checklist does not substitute for the code; it is intended to be used as a guide in preparing your final construction drawing/building permit submittal. Refer to the Redmond Community Development Guide and Redmond Municipal Code for detailed information on each requirement.

2. To ensure compliance with residential site standards, at the time that construction drawings are submitted for Public Works review, the applicant shall provide two (2) copies of the construction drawings, clearing/grading plan and tree retention plan at a scale of 1" = 20' to the Planning Department.

3. A sign permit application must be submitted separately to the Planning Department for review and approval prior to installation of any proposed signs (RCDG Section 20D.160.10-020).

4. Transportation, parks, and fire impact fees shall be assessed at the time of building permit issuance for each residence. **The fee in effect at the time of complete building permit application shall apply.**

C. Specific Planning Requirements:

1. Planned Residential Development Approval. The proposal is dependent upon the approval of a Planned Residential Development application. The Hearing Examiner receives testimony and recommends to approve, conditionally approve, modify, or deny the application for Planned Residential Development to the Redmond City Council. The Preliminary Plat shall not be undertaken except in compliance with the approval of a Planned Residential Development application in the same format as those plans dated December 16, 2002.

2. Landscaping:

   a. The landscape plan should include landscaping details for the storm water facility, which will enhance its appearance as a naturally occurring water feature (RCDG Section 20D.40.25-080). The general goal should be to create a varied planting pattern with a diversity of native species that would be found in a palustrine emergent, seasonally flooded (or otherwise inundated) wetland. The planting must be appropriate for the water regime that is anticipated. The design should be done by a qualified wetland consultant or landscape architect with experience in wetland mitigation or planting in wetland areas.

   b. Landscaping shall be coordinated with water/sewer lines and fire hydrants/connections. Trees shall be planted no closer than 8 feet from the centerline of any water/sewer lines. Shrubs shall be planted to maintain at least 4 feet of clearance from the outside edge of the shrub to the center of all fire hydrants/connections. Ground cover may be planted within this radius. (RCDG Section 20D.80.10-150(8)).

   c. Planting shall meet the City requirements for site clearance at intersections as identified in Section 20D.210.25 of the Redmond Community Development Guide. (20D.80.10-150(2))

   d. For any landscaping along 172nd Avenue NE and 174th Avenue NE, an irrigation system shall be maintained by the Home Owners' Association or other means acceptable by the City of Redmond Parks Department. Maintenance of landscaping shall be the responsibility of the Homeowners Association, including that portion located within the public right-of-way along 172nd Avenue NE and 174th Avenue NE. Any installation or other work in the public right of way requires an Extended Right of Way Use Permit issued by the Public Works Department.

   e. Street trees are required as follows (RCDG Section 20D.80.10-140):

Street	Species	Spacing on Center	Notes
172nd Avenue NE	*Cleveland Maples*	*30'*	*Minimum 2.5" caliper Specimen to be grown*

			for street use.
Internal Streets	*To be determined.*	*TBD*	*Per Landscaping Requirements. Note: The City does not maintain internal street trees.*

2. Sensitive Areas:

   a. A wetland and buffer enhancement plan shall be submitted with the Construction Drawings. The plan shall meet the requirements of Appendix 20D-2 (V) of the Redmond Community Development Guide.

   b. A sensitive areas analysis shall be completed for off-site improvements that extend into areas with potential wetlands or streams. Mitigation will be required where improvements extend into a sensitive area or its buffer and beyond those improvements that currently exist.

   c. A split rail fence shall be installed to delineate all sensitive areas and native growth protection area tracts. Sensitive area signage (available from the City of Redmond) shall be installed to provide for notice in the field regarding the presence of sensitive areas. Signage shall be affixed to the fence approximately on the midpoint of each lot's rear property line. Where fencing does not abut an individual lot, signage shall be placed approximately every 100'. Signage and fencing shall be shown on the construction drawings. Final location and materials will be subject to approval by the Planning Department.

3. Tree Protection Measures:

   a. Existing Significant Trees to Remain, as designated on the proposed Tree Preservation Plan, dated 12/16/2002, shall be saved.

   b. Tree preservation measures for trees designated to be saved must at a minimum comply with required tree protection in RCDG Section 20D.80.20-100(1). These measures include but are not limited to the following requirements:

      i. All construction activities, including staging and traffic areas, shall be prohibited within five feet of the dripline of protected trees.

      ii. Tree protection barriers shall be installed along the outer edge and completely surround the area 5' from the dripline of significant trees to be protected prior to any land disturbance.

iii. Tree protection barriers shall be a minimum of four feet high, constructed of chain link, or polyethylene laminar safety fencing or similar material. "Tree Protection Area" signs shall be posted visibly on all sides of the fenced areas. Signs requesting subcontractor cooperation and compliance with tree protection standards may also be required to be posted at site entrances.

iv. Where tree protection areas are remote from areas of land disturbance, and where approved by the Planning Department, alternative forms of tree protection may be used in lieu of tree protection barriers, provided that protected trees are completely surrounded with continuous rope or flagging and are accompanied by "Tree Save Area-Keep Out" signs.

v. Per RCDG Section 20D.80.20-080(1), each significant tree that is removed on the site must be replaced by one new tree. The required number of replacement trees must be identified on the Tree Replacement Plan. The minimum size of replacement trees is 2-½ -inch caliper for deciduous trees and six to eight feet in height for evergreen trees.

vi. Two copies of the final Tree Preservation Plan, Landscape Plan and Tree Replacement Plans at 1"=20' scale must be submitted with construction drawings and approved prior to issuance of construction drawings. The final plans shall be prepared or approved by a licensed landscape architect, registered Washington certified nurseryman or registered Washington certified landscaper (RCDG Section 20D.80.10-040). This certification shall be noted on all landscape-related plans. A copy of the Tree Preservation Plan shall be recorded with the Final Plat.

vii. Restrictive covenants shall include a statement notifying property owners and the Homeowner's Association that significant and landmark trees on individual lots may only be removed in accordance with the approved tree retention plan. This language shall be reviewed and approved by the Planning Department prior to recording of the restrictive covenants with King County.

viii. A tree health assessment shall be completed for off-site improvements that extend into areas with significant and landmark trees. Mitigation will be required where trees are removed or improvements extend within 5' of the dripline of any healthy, significant or landmark tree, beyond those improvements that currently exist.

4. **Reduction of Front Yard Setback. The proposed reduction in front yard setback to below the required 10' is not approved. The site plan shall be revised such that the 10' front yard setback is**

met. Impacts to trees resulting from the change shall be mitigated.

II. ENGINEERING REQUIREMENTS

A. No lots shall be permitted direct access to 172nd Avenue NE. The specific lots affected by this restriction shall be listed on the face of the final plat and other documents.

B. Easements & Dedications: Existing and proposed easements and rights-of-way shall be shown on the final plat, civil plans and other documents. Any existing easements for ingress, egress, private utilities, franchise utilities, etc. that lie within the Plat or within rights-of-way adjacent to the Plat shall be released or modified to the City of Redmond's satisfaction prior to final plat approval.

1. Public easements are required as follows:

a) 10-feet wide for sidewalk and utilities adjacent to the right of way along the east side of 172nd Avenue NE.

b) 10-feet wide for sidewalk and utilities adjacent to the right of way along the west side of 174th Place NE.

c) 10-feet wide for sidewalk and utilities adjacent to the rights of way along both sides of the internal plat streets: NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE.

d) 10-feet wide for pedestrians from NE 119th Court across private Tract E to 172nd Avenue NE and from 173rd Place NE across private Tracts G and H to 174th Place NE.

e) Rights-of-way dedicated to the City of Redmond are required as follows: 50 feet wide for the internal plat streets: NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE.

f) Private tracts are required as follows:

(1) 35 feet wide for the internal plat streets within Tracts F, G and I.

(2) 20 feet wide for the internal plat streets within Tracts E and H.

(3) New right-of-way lines joining at intersections shall connect with a minimum of a 25-foot radius, or with a chord that encompasses an equivalent area. The area formed by this radius or chord shall also be dedicated as right-of-way.

(4) All lots are subject to an easement for utilities and drainage facilities over, under and across a strip of land 2-1/2 feet wide along each side of the interior lot lines within the development, together with a strip of land 5 feet wide along the lot lines around the perimeter of the development.

C. Public and Private Engineering/Transportation Improvements

1. Half street improvements are required on 172nd Avenue NE including asphalt paving 18 feet from centerline to face of curb with appropriate tapers, type A-1 concrete curb and gutter, planter strip, concrete sidewalk, storm drainage, streetlights, street trees, street signs

and underground utilities including power and telecommunications. The minimum pavement section for 172nd Avenue NE shall consist of:

a) 4" Asphalt Pavement Cl. A

b) 5" Asphalt Pavement Cl. E

c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTMD 1557)

d) Street crown 2% sloped to drain system

2. Half street improvements are required on 174th Place NE behind the existing curb and gutter including planter strip, concrete sidewalks, street lights, street trees, street signs and underground utilities including power and telecommunications.

3. On 172nd Avenue NE and 174th Place NE the ASPHALT STREET shall be planed, overlaid, and/or patched to repair damage done by utility cuts and other work, as determined by the Engineering Division.

4. Sidewalks constructed to City standards are required within the pedestrian easements between private Tract E and 172nd Avenue NE and between private Tracts G and H.

5. Other off-site improvements include widening of 172nd Avenue NE on the southbound approach to NE 116th Street as outlined in the SEPA conditions for this Plat.

6. Prior to the City allowing occupancy of any home constructed within the Curry Property Plat, the developer shall design and construct an interim walkway for school children along the east side of 172nd Avenue NE from the pedestrian connection at Tract E to NE 116th Street, along with other minor improvements at the 172nd Avenue NE/NE 116th Street intersection as needed to ensure safe crossing of these streets. The interim walkway shall be constructed of asphalt or Portland cement concrete. The interim walkway shall be a minimum of 5-feet wide when located adjacent to curb and gutter or other traffic barrier acceptable to the City. The interim walkway shall be a minimum of 4-feet wide and located a minimum of 10-feet from the street edge where no curb and gutter or other traffic barrier acceptable to the City exists. A safety railing or fencing will be required when (1) the interim walkway is located at the top of a slope or wall that is 2:1 or steeper and (2) the walkway elevation is 30-inches or higher than the toe of the slope or wall. This requirement is also a condition for the Wynstone Plat located to the north of the Curry Property. The applicant is encouraged to work with the Wynstone Plat applicant to share the cost of this improvement. For that portion of the safe walking route across Tax Parcel 252605-9098, completion of the curb, gutter and sidewalk is likely the most cost effective alternative.

7. All vehicle use areas including driveways, private streets, service areas, etc. shall be paved.

8. Specific subdivision public street improvement conditions for NE 117th Way, NE 119th Court, NE 119th Way, 173rd Place NE:

a) Street improvements within the 50-foot wide dedicated right-of-way shall include asphalt paving (28 feet curb to curb), with appropriate tapers, type A-1 concrete curb and gutter, planter strips, street trees, concrete sidewalks, storm sewers, streetlights, street signs, and underground utilities including power and

telecommunications. The minimum pavement section for the streets shall consist of:

(1) 3" Asphalt Pavement Cl. B

(2) 4" Asphalt Treated Base

(3) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTMD 1557)

(4) Street crown 2% sloped to drain system

(5) The cul-de-sac on NE 119th Court is required to have a minimum radius of 44 feet to the face of curb. A planter island shall be provided in the center of the cul-de-sac to reduce, as much as possible, the amount of asphalt. The maintenance of the landscape in the island shall be the responsibility of the adjacent property owners. This maintenance requirement shall be included on the face of the final plat.

b) Specific short subdivision private street improvement conditions for the internal streets within Tracts F, G and I:

(1) Street improvements shall include asphalt paving (28 feet), with appropriate tapers, thickened asphalt edge or type A-1 concrete curb and gutter, concrete sidewalk (one side), storm sewers, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(a) 2" Asphalt Pavement Class B

(b) 4" Crushed Rock surfacing

(c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTM D 1557)

(d) Street crown 2% sloped to drain system

c) Specific short subdivision private street improvement conditions for the internal streets within Tracts E and H:

(1) Street improvements shall include asphalt paving (20 feet), with appropriate tapers, thickened asphalt edge or type A-1 concrete curb and gutter, storm sewers, street signs, and underground utilities including power and telecommunications. The minimum pavement section for the streets shall consist of:

(a) 2" Asphalt Pavement Class B

(b) 4" Crushed Rock surfacing

(c) Subgrade compacted to 95% compacted maximum density as determined by modified Proctor (ASTM D 1557)

(d) Street crown 2% sloped to drain system

(2) Installation of mailbox stand(s) shall be in accordance with City standards.

d) All power, telephone, streetlights, etc. shall be shown on the engineering drawings and landscape plans submitted for construction permits.

e) A composite drawing that includes all utilities, landscaping including trees, etc., is necessary to minimize the possibility of utilities/landscaping conflicts.

f) CONVERSION OF AERIAL UTILITIES (POWER, TELEPHONE, T.V., ETC. TO UNDERGROUND)

(1) All aerial utilities shall be converted to underground along all street frontages and within the short plat according to 20D.220.10 "Underground Wiring" in the Redmond Community Development Guide.

D. The applicant shall meet the construction plan and construction requirements in Attachment B, "REQUIREMENTS FOR CONSTRUCTON DRAWINGS" and Attachment C, "GENERAL INFORMATION AND ADMINISTRATION REQUIREMENTS".

III. UTILITIES REQUIREMENTS

A. Sewer

1. Sewer service will require a developer extension of the City of Redmond sewer system as follows:

a) Construct sanitary sewer improvements more or less as shown on the Preliminary Plat drawings dated December 12, 2002.

b) (The sewer main location shown on the site plan may not conform to City standard location. Revisions to comply with City standard locations may be required.)

2. Vehicular access to all new and existing manholes shall be provided. The access easement shall be a minimum of 20 feet in width with asphalt concrete surfacing. Alternative surfacing may be approved by the City depending upon the location. If access passes through fencing then 14-foot minimum width gates shall be provided. The plat or easement document shall (1) show and dedicate the 20-foot access easement, (2) have covenants advising property owners of their obligation to maintain the availability of the access by providing gates and not obstructing the access, and (3) that the property owners maintain, repair and replace the access surfacing as needed.

B. Water:

1. Water service will require a developer extension of the City of Redmond water system as follows:

a) Construct on-site water improvements more or less as shown on the Preliminary Plat drawings dated December 12, 2002. A 12-inch water main shall be constructed to serve the site in 172nd Avenue NE from NE 116th Street to the northern limits of the plat, more or less as shown on the Preliminary Plat drawings. An 8-inch stub shall be extended across 172nd Avenue NE in the vicinity of NE 117h Street and connected with the existing 8-inch main in that vicinity.

b) (The water main location shown on the site plan may not conform to City standard locations. Revisions to comply with City standard locations may be required.)

IV. CLEARING/GRADING AND STORMWATER MANAGEMENT

A. Erosion control systems must be implemented throughout the construction process and until the site is stabilized. Design of all systems must be in accordance with section 20E.90.10 of the Community Development Guide and the most recent issue of the City of Redmond STORMWATER MANAGEMENT AND EROSION CONTROL TECHNICAL NOTEBOOK (notebook). Contact the Stormwater Division at 556-2890 for information about, or a copy of, the notebook. Preferred methods for management and control are discussed in the notebook.

B. Stormwater Management

1. Quantity Control

a) In an open pond; provide detention for peak discharge control to match one half of the 2-year and match the 10-year and 100-year storms natural (prior to any development) runoff peak flow rates.

b) Provide for overflow routes through the site for the 100 year storm runoff (100 year flow may not impact any buildings).

2. Quality control. Use a lined, open pond to provide water quality treatment for the runoff from the 6-month, 24-hour design storm event. Use the developed condition land use when determining the water quality storm flow rate and volume.

3. Provide maintenance vehicle access to the pond bottom and outlet control structure from 174th Place NE.

C. Miscellaneous

1. Construction activities may be limited or suspended during the rainy season (October 1 – April 30).

2. Stencil all on-site storm drainage inlets with "DUMP NO WASTE DRAINS TO STREAM". Stencils are available from the Stormwater Division located at the City Annex (phone 556-2840). Design plans shall identify the requirement to stencil drainage inlets. Easements will be required for any public conveyance systems.

3. Trees are not allowed within 8 feet of storm systems.

4. Ponds shall be lined in accordance with the Department of Ecology Stormwater Management Manual for the Puget Sound Basin, (1992).

5. Designate private roads on the construction plans and plat drawings by adding **(Private)** after the road name.

V. FIRE PROTECTION

A. EMERGENCY VEHICLE ACCESS ROADWAY REQUIREMENTS

1. Emergency vehicle access roadways shall be an unobstructed 20 feet in width and 13' 6" high. Turning radii shall be 25' interior and 45' exterior.

2. Fire lanes shall be located wherever curbs, road edges, or loading areas are adjacent to the 20-foot wide vehicle access roadway. Fire lanes identified through site plan review shall be included on the final civil drawings. Additional fire lanes and marking may be required anytime during the life of the development upon evaluation by and direction of the Fire Marshal. Where fire lanes are a 28 feet wide access tract or easement, the side not

used for parking shall be signed "No Parking - this side" or "No Parking –Fire Lane- this side". If the access tract or easement is 20 feet then both sides shall be signed.

3. Driveway entries or curb returns shall be provided to meet minimum roadway radii at all tracts, easements or other intersections. Do not measure into areas where parking is allowed. This includes where Tract E meets 172nd Ave NE.

4. Traffic circles shall not impede into required radii. The circle at NE 119th and Tract E, and at NE 119th and 173rd AVE NE shall be reduced in diameter to allow through movements in both directions.

B. ADDRESSING

1. Each lot shall have the building address numerals installed per the Redmond Fire Department Design and Construction Guide. A nominal 6-inch high numeral shall be used.

2. Approval is required for building and unit addressing.

3. Temporary signs shall be used at the job site as soon as construction begins. Numerals shall be high contrast in color, face the street fronting the property, and be a minimum 6" high.

4. The "T" road labeled NE 118th shall be called 172nd Ct NE and so signed at the intersection with NE 117th Way. Lots 66, 65 and 64 shall be addressed with 117xx, ascending odd numbers. Lots 62 and 63 shall be addressed with 117xx, ascending even numbers.

5. Lots 14, 13, 16, 15 shall be ascending odd numbers addressed off 174th Pl NE.

C. CITY APPROVED FIRE ALARM SYSTEM: Single station smoke detection is required in all residential occupancies.

D. KNOX BOX: A "Knox" padlock is the only locking device approvable for the bollards at Tract E. Contact the Redmond Fire Department for purchase information.

E. HYDRANTS

1. Hydrants must be in place and serviceable prior to combustible construction.

2. Planter islands or peninsulas for hydrants require a minimum diameter of 8 feet. Four feet is to be maintained between face of curbs and fire protection equipment. Hydrants shall not be located behind parking. See the hydrant on the west side of 173rd Pl NE, just south of NE 118th CT (Tract F). This may need to be moved to the east side of the street.

F. OTHER: ADDITIONAL REQUIREMENTS MAY BE SET ON REVIEW OF CIVIL, ARCHITECTURAL, FIRE ALARM AND/OR FIRE SPRINKLER PLANS.

CONCLUSION

With those conditions of approval recommended herein and with those mitigating measures identified on the threshold determination for this proposal, the Curry Preliminary Plat and the Curry Planned Residential Development proposals appear to be consistent with the applicable Redmond Comprehensive Plan policies. The proposal appears to satisfy the Development Guide's site requirements for residential development, and standards related to streets and utilities improvements, natural features and sensitive areas, and fire protection.

JAMES L. ROBERTS
Assistant Director
Department of Planning and Community Development

RICHARD BARTHOL
Assistant City Engineer
Public Works Department

Attachment A
General Planning Requirements

Topic	Code Reference *	Brief Explanation
Drawing Submittal Requirements		
Landscape Plan		Preparer: Prepared or approved by a licensed landscape architect, registered WA certified nurseryman or registered WA certified landscaper. Note certification on all landscape related plans. Scale: 1"=20'; Submittal Timeframe: With the building permit/construction drawings; Required Elements: (1) Conditions of approval listed; (2) Complete plant schedule listing for each plant with the scientific and common names, quantities, size in height/spread, and spacing; (3) Identify which trees are designated as replacement trees, saved trees, and new planting. Show locations of trees in relation to water and drainage lines; (4) Note the area in square feet and the percent of the total site devoted to the following type of landscaping: perimeter, interior parking lot, building foundation, and courtyard/patio/plaza.
Tree Preservation/Tree Replacement Plan		Preparer: Prepared or approved by a licensed landscape architect, registered WA certified nurseryman or registered WA certified landscaper. Note certification on all landscape related plans. Scale: 1"=20'; Submittal Timeframe: With the building permit/construction drawings; Required Elements: (1) Conditions of approval listed; (2) Show location, species, size of trees designated for retention; (3) List total percentage of trees to be retained (4) Identify size and species of replacement trees (5) Show all tree protection measures.
Reduced set of the building permit/construction drawings		Must be submitted with the building permit/construction drawings. Either 8 ½ x 11 or 11 x 17 is acceptable.
Restrictions		The following statement must be included on the mylars and all construction drawings: "Trees to be preserved shall be designated in accordance with the approved tree preservation plan on file with the City of Redmond Planning Department. Designated trees which are damaged or destroyed shall be replaced in accordance with RCDG Section 20D.80.20-080, or as hereafter amended."
Required Bonds		
Landscape and Irrigation Improvements Performance and Maintenance Bonds	RCDG 20D.80.10-190 RCDG 20D.80.10-050	Purpose: Performance security for landscape improvements; Estimate: Submit estimate with quantities, sizes, and unit costs for planting and an overall cost for irrigation and labor with the building permit/construction drawings; Bond Submittal Timeframe: Prior to issuance of the building permit/construction drawings. Amount: Must represent 100% of the cost of the improvements, 15%

Topic	Code Reference *	Brief Explanation
		contingency, and 8.6% sales tax; Maintenance Bond: A 1 year maintenance bond shall be required for the release of the performance bond. Maintenance bond shall be valued at 10% of the performance bond.
Tree Protection Measures Bond	RCDG 20D.80.20-120(1)	Purpose: Ensure the installation, maintenance and adequate performance of tree protection measures; Bond Submittal Timeframe: Prior to issuance of the building permit/construction drawings. Amount: equal to 150% of the City's estimated cost of replacing each protected tree ($250.00) plus 8.6% sales tax; Estimate: Submit estimate of bond amount with the building permit /construction drawings; Bonding period: 5 years; Note: Prior to issuance of the CO, any protected tree found to be irreparably damaged, severely stressed or dying shall be replaced.
Tree Replacement Bond	RCDG 20D.80.20-120(2)	Purpose: Ensure survival of replacement trees; Bond Submittal Timeframe: Prior to issuance of the building permit/construction drawings. Amount: Equal 150 percent of the cost of plant material, periodic fertilizing and pruning and labor until tree survival is ensured, plus 8.6% sales tax; Estimate: Submit estimate of bond amount with the building permit /construction drawings; Bonding period: 3 years
General Requirements		
Landscaping Improvements		
Automatic Irrigation System	RCDG 20D.80.10-180	An automatic irrigation system shall be installed in all planting areas over 500 square feet. An irrigation plan must be submitted with the final landscape plan. Irrigation systems in the public right of way will require an Extended Use Permit.
Adjacent Unimproved Right-of-way	RCDG 20D.80.10-110	Adjacent unimproved portion of the public right-of-way shall be landscaped from the property line to the edge of the pavement and shown on the landscape plan. The installation of private irrigation facilities in the public right of way requires an Extended Right of Way Use Permit and related Certificate of Insurance. Please contact the Public Works Department regarding this permit.
Coordination With Water/ Sewer Lines & Fire Hydrants	RCDG 20D.80.10-150(8)	Trees shall be planted a minimum of 8 ft from the centerline of any water/sewer lines. Shrubs must be planted a min of 4 ft from the center of all fire hydrants/connections.
Site Clearance	RCDG 20D.80.10-150(2)	Planting must meet site clearance requirements at intersections
Minimum Tree Size at Installation	RCDG 20D.80.10-100(5)	Deciduous trees: 2" caliper; Vine maples and other multi-stemmed trees: 7'-8' minimum height; Evergreen trees: 6'-7' minimum height; Medium and tall shrubs: 24"-30" minimum height; Groundcover: 4" container (18" o.c.).
Minimum Planting Area	RCDG 20D.80.10-120	All planting area shall be 100 square feet and no less than 5 ft in width or length.
Spacing of Parking Trees from Curbs	RCDG 20D.80.10-150(5)	Trees shall be planted at least 4+ feet from pavement edges where vehicles overhang pavement edges.
Ground Cover Plantings	RCDG 20D.80.10-	Bark, mulch, gravel or other non-vegetative material

Topic	Code Reference *	Brief Explanation
	100(7)	shall only be used in conjunction with ground cover plantings to assist growth and maintenance or to visually complement plant material.
Sensitive Areas		
Final Sensitive Area Report	RCDG Appendix 20D-2	A final sensitive area report and mitigation plan must be submitted with the building permit/construction drawings.
Recording of Sensitive Area	RCDG 20D.140.10-110(3); 20D140.10-100(6); 20D.140.10-090(6); 20D.140.10.290(2)(j)	The regulated sensitive area and its associated buffer must be protected by a NGPE or placed on a separate tract where development is prohibited. Proof of recording must be submitted to the City prior to issuance of Certificate of Occupancy.
Sensitive Area Contingency Plan	RCDG 20D.140.10-330	Must be established for indemnity on the event that the sensitive area mitigation project is inadequate or fails.
Tree Preservation	RCDG 20D.80.20-080 (4)	All construction activity is prohibited within 5 ft of the drip line of protected trees. Refer to the code section for additional tree protection measures.
Tree Replacement	RCDG 20D.80.20-080	The planting of replacement trees must be in accordance with the guidelines outlined in this code section. All required tree replacement and other required mitigation must be completed prior to issuance of a CO/recording of final plat.

Attachment B
Requirements For Construction Drawings

I. Engineering/Transportation

A. General Requirements

1. **Engineering Plans** for on-site and off-site drainage (storm water management), clearing, grading, utility and street improvements are required. The plans shall be prepared by a registered engineer and shall be reviewed and approved by Public Works Department prior to issuance of the building, foundation, clearing and grading or street use permits. Plan size must be 22" x 34" at a scale of 1" = 20' unless otherwise approved by the City. **The following design manuals should be obtained to guide design work:**

a) Standard Specifications and Details

b) Clearing, Grading and Storm water Management Redmond Technical Notebook

c) Design Requirements for Water and Sewer System Extensions

d) Community Development Guide

These manuals reference a number of other commonly used engineering standards. It is vital the design professional performing this work be aware of the City and other pertinent standards to reduce review time. ***The City will not accept designs that deviate from the standards without substantial justification.*** Early consultation between design professionals and City staff is highly recommended if a design will propose deviations.

All power, telephone, streetlights, etc. shall be shown on construction drawings to facilitate identification and resolution of utility conflicts. All utilities to individual homes and on new streets shall be placed underground unless specifically exempted in rare cases for existing homes. All existing aerial utilities shall be converted to underground along all street frontages.

The designer must be sensitive to the existence or creation of utility easements within the project. Permanent structures not associated with the utility use—including rockeries—shall not be built within easements.

When construction drawings are submitted for review, eight (8) complete copies of the civil plans and two (2) sets of drainage computations and studies are required for a complete submittal. Only complete submittals will be accepted for review. (After the initial submittal, fewer copies may be required. If desired, you may contact Public Works at 556-2740 to determine the exact number required.)

At the time of construction drawing approval, a digital file of the drawings shall be submitted to the city. File format shall conform to the requirements identified under '2000 Record Drawing Requirements' (see below).

B. Survey Control

1. Vertical control: Elevations must be referenced to City of Redmond Datum. This Datum is based on the U.S.C. & G.S. benchmark B-385 (1927). The Surveyor must tie the project to two numbered benchmarks. A publication of the benchmarks may be purchased from the City's Public Works service counter under the name City of Redmond Vertical Control Survey February 1990.

2. Horizontal control: The surveyor shall tie the project to two City of Redmond horizontal control monuments. The plans shall show NAD 83-91 coordinates on a minimum to two points at exterior lot/boundary corners. A publication of the Redmond City Horizontal Control Notebook dated 1993 can be purchased at the Public Works service counter.

3. New and Existing Monumentation: New survey monuments shall be installed at new street intersections, street tangent points and center of cul-de-sacs in accordance with the City of Redmond Standard Details. Existing monumentation must be identified on the construction plans and maintained by the contractor throughout the construction period.

C. Street Design:

1. Civil plans for all public and private street construction must include existing and proposed centerline profiles and curb/edge of pavement elevations. Cross sections at regular stationing along the length of the project may be required.

2. All intersection shall be "+"-type intersections with side streets aligned with each other, or "T"-type intersections with side streets separated by a distance of at least 150 feet.

3. Horizontal alignment shall indicate radius, length of tangent between curves, and length of curve. Minimum curve radii and tangents shall comply with the requirements stated in Appendix 20D-3 in the Redmond Community Development Guide.

4. Vertical curves shall indicate length of vertical curve, slopes, and length of tangent between curves. Minimum stopping sight distance for design shall be 450 feet on arterials and collectors, 225 feet on local public access, and 150 feet on private streets. Minimum tangents shall comply with the requirements stated in Appendix 20D-3 in the Redmond Community Development Guide.

5. Cross slopes and superelevation of roadways shall not exceed two (2) percent unless approved by the City of Redmond Public Works Department.

6. On sloping approaches at intersections, landings are not to exceed 2 feet difference in elevation for 30 feet approaching an arterial or 20 feet approaching a local access street (measured from the back of sidewalk or the back of curb if no sidewalk exists).

7. Curb radius shall be 25 feet for local access streets and 30 feet for arterial and collector streets.

8. Street rights-of-way shall intersect at 80 to 90 degrees where possible.

9. Sight Distance: Adequate entering sight distance shall be maintained at all connections to public streets in accordance with Section 20D.210.25 "Sight Clearance at Intersections" of the Redmond Community Development Guide, pages 347 and 348. The appropriate sight distance triangles shall be drawn on the civil and landscaping plans.

10. Any pedestrian crossings at intersections, or across curb return type driveways need to include handicap ramps. These ramps must be designed to meet the most recent ADA standards.

D. **General Notes:** The following notes shall be included on the construction plans for this project:

1. Safety railings shall be required when the bottom of a rock wall, retaining wall or slope is 30" or more below the finished elevation of a sidewalk or other pedestrian facility.

2. WSDOT approved guard rails shall be required as directed by the City Inspector, subject to approval by the City Transportation Engineer.

3. Contractor is responsible for installing all signs and channelization per City of Redmond standards. Contractor shall lay out all signs and channelization, and then contact Deby Canfield, Senior Transportation Technician, at (425) 556-2752 48 hours in advance of installation to verify layout.

4. All necessary signs and markings on-site, along property frontage, and at specifically designated off-site locations shall be provided by the applicant as required by the Transportation Division whether or not these are indicated on the construction drawings.

5. When requested by the City Inspector, the geotechnical engineer employed by the developer shall verify and subsequently advise the City of Redmond that the installation of the paving section(s) conforms to his/her design. The project will not be accepted until this written documentation is submitted.

E. Signs, Striping, Street Lighting and Signals

1. Separate 40 scale channelization plans are required for all public streets being modified or constructed. The plan shall include the existing and proposed signs, striping and street lighting for all streets adjacent to the site and within 150 feet of the site property line (both sides of the street). The plan shall conform to the requirements in the City of Redmond Standard Specifications and Details Manual.

2. All traffic control devices, including signs and pavement markings, shall conform to the MUTCD and the City of Redmond Standard Details. The Transportation Division shall approve all layouts prior to installation.

3. Streetlights are required on the internal plat streets to illuminate the property frontage. The street lighting shall be designed using the following criteria:

Table 2: Street Lighting

Roadway Classification	*Area Classification*	*Average Illuminance (Foot-candles)*	*Uniformity Ratio (Average/Minimum)*
Collector and Local	*Residential*	*0.6-0.4*	*6:1*

Luminaire spacing should be designed to meet the specified criteria for the applicable lamp size, luminaire height and roadway width. Contact Dave Alm, Transportation Operations Manager, at (425) 556-2875 with questions.

Attachment C
General Information and Administration Requirements

I. FEES:

A. Parks: Parks impact fees will be assessed at time of building permit issuance per the adopted fee schedule.

B. Water/Sewer

1. Plan review and construction inspection fees are required and will be at the rate in effect when plans are approved. Connection fees are at the rate in effect when water meter and side sewer permits are issued. Contact the Utility Division of the Public Works Department to obtain an estimate of the fees that will apply.

2. All reimbursement fees shall be paid prior to sale of water and side sewer permits. Reimbursement fee may be required prior to plat or short plat recording.

C. Fire: This development will be assessed impact fees per the adopted fee schedule.

D. Stormwater - Fees to be Paid Prior to Permit

1. Fees must be paid for construction drawing review and for construction inspection.

2. Based upon the plans presented, the **construction drawing review fee** is estimated to be **$2,437.00**. A deposit equal to that amount is due and payable when construction drawings are presented for review. The construction drawing review fee will be adjusted to account for plan changes during review and will be determined prior to drawing approval. If the adjustments cause the fee to exceed the deposit, the balance due must be paid prior to approval of drawings. If adjustments result in a final figure less than the deposit, the overpayment may be credited against the subsequent fee below or will be refunded.

3. A **construction inspection fee** equal to the final construction drawing review fee is due and payable at the time a permit is issued.

4. Based upon the current estimate, the total storm water review and inspection fees for this project will be approximately **$4874.00**. Crediting the project with the initial deposit of $304, the total amount due will be approximately **$4570.00**.

E. Engineering/Transportation

1. A plan review fee shall be paid to both the water and sewer utility and the storm water utility prior to construction drawing review. Inspection fees shall be paid to the utilities prior to construction drawing approval. Plan review and construction inspection fees are required and will be at the rate in effect when plans are approved. Contact the respective utility for fee information.

2. Water and sewer connection fees for homes built on the proposed lots will be paid at the rate in effect when water meter and side sewer permits are issued. Contact the Utility Division of the Public Works Department at 556-2840 to obtain information and/or an estimate of the fees that will apply.

3. Non-Utility Plan Review and Inspection fees are paid through the Engineering Plan Review and Inspection Fee (subject to annual revision.) The fees are (subject to annual revision): Subdivision Fee = $5,988 plus $436/lot *.

4. Transportation Impact Fees: This project is subject to Redmond Transportation impact fees. Transportation impact fees shall be collected at time of building permit issuance.

5. The City has recently imposed other impact fees on development. Contact the Permit Center to determine the extent to which these fees apply to this development.

6. A Street Use Permit will be required and includes:

a) A maximum of $324* fee (subject to annual revision) for utility installation in the public right-of-way.

b) A posting of a $250 cash bond for street cleaning.

c) Note: * A 3% technology surcharge will also be applied to these fees effective January 1, 2001 through December 31, 2002, as authorized by Ordinance No. 2090, adopted on December 5, 2000.

II. Easements/Agreements:

A. Planning: Refer to Attachment A for Requirements.

B. Water/Sewer

1. Easements shall be provided for all water and sewer improvements as required in the design requirements. Offsite easements must be recorded prior to construction drawing approval. Onsite easements must be recorded prior to the improvements being placed into operation.

C. Engineering/Transportation

1. A copy of all recorded easements pertaining to the property is required. Permanent structures including rockeries cannot be built over easements.

2. Easements shall be provided for all water, sewer and storm water improvements (both public and private) as required in the design requirements. **Off-site easements needed to execute the proposed improvements must be recorded prior to construction drawing approval.** On-site easements must be recorded prior to the improvements being placed into operation.

3. When clearing and grading involves excessive amounts of hauling, as determined by the Public Works Department, a Road Surface Impact Mitigation item shall be negotiated prior to approval of the Clearing and Grading Plans.

4. Any required landscape irrigation in the City of Redmond right-of-way necessitates the execution of a Hold-Harmless Agreement and submittal of as-built construction plans to the City.

D. Approvals and Reports

1. Water/Sewer:

a) Agency Approvals, Construction drawings for sewer improvements shall be reviewed and approved by Metro and DOE prior to construction. Construction

drawings for water improvements may need to be reviewed and approved by DSHS prior to construction.

b) Bill of Sale. A Bill of Sale shall be provided for all water and sewer improvements to be owned and operated by the City.

c) Asset Summary. A Developer Extension Asset Summary shall be provided for all water and sewer improvements to be owned and operated by the City.

d) Permit Applications. Water meter and side sewer permit applications shall be submitted for approval to the Utility Division. Permits and meters will not be issued until all improvements are constructed and administrative requirements are complete. Requests to install water meters or construct side sewers prior to completion of all water and sewer improvements and administrative requirements will only be approved on a case by case basis after review of the project specifics. Various additional guarantees or requirements may be imposed as determined by the Utilities Division for issuance of meters and permits prior to improvements or administrative requirements being completed.

e) Reimbursement Agreement: Portions of this extension may benefit other properties and meet the criteria to be eligible for a reimbursement agreement. In order to be eligible for reimbursement, the City must have received a completed reimbursement agreement application prior to approval of construction drawings and the agreement must be fully executed, by the City, prior to commencement of construction of the facility.

2. Stormwater: A copy of the conditions of approval (this letter) must accompany all Grading and Storm drainage plan submittals.

3. Engineering/Transportation: In order to mitigate potential impacts to critical landslide hazard areas, all buildings shall be set back from the top/bottom of slope areas a distance as recommended by a geotechnical engineer through a slope stability analysis, but no closer than 15 feet. The top/bottom of the slope shall be field surveyed and verified (located by bearings and distances) on the final plat and construction drawings.

E. Bonds and Performance Guarantees:

1. Planning: Refer to Attachment A for Requirements.

2. Water/Sewer

a) Performance Guarantee. A performance guarantee shall be provided in a form acceptable to the City for sewer and water improvements as follows:

(1) Plats and short plats: All water and sewer improvements within City right-of-way or easement and any other portion of the improvements as required by the Utility Division.

(2) For any improvements not completed at time of recording of the plat or short plat.

(3) The amount of the performance guarantee shall be established by the City upon review of estimates prepared by the applicant and the guarantee shall be provided prior to plan approval.

b) Maintenance Guarantee. A maintenance guarantee shall be provided in a form acceptable to the City for all water and sewer improvements to be owned and operated by the City. Period of guarantee shall be 1 year from acceptance of all improvements by the City.

3. Engineering/Transportation:

a) A performance guarantee shall be provided in a form acceptable to the City for street, water, sewer and storm water improvements. An acceptable performance guarantee includes a performance bond, irrevocable letter of credit, or cash. (In some unusual circumstances assignment of loan proceeds may be acceptable.) The amount of the bond shall be 125% of the estimated cost. **Only City of Redmond security forms are acceptable.** The performance guarantee will not be released until letter from the Director of Public Works advises the developer that all conditions of approval have been met. Circumstances that require performance guarantee are as follows:

(1) Subdivision:

(a) The street and utility improvements within existing and new street right-of-way.

(b) Off-site storm drainage, water and sanitary sewer installation.

b) A maintenance guarantee shall be provided for all water, sewer, storm water and street improvements to be owned and operated by the City. Period of guarantee shall be 1 year from acceptance of all improvements by the City. (The City has authority to require a longer period where circumstances warrant.)

c) A cash deposit (refundable cash bond) shall be posted at the time of posting the performance guarantee to ensure the completion of the Record Drawing set. The minimum amount shall be $5,000.00, or as determined by the Engineering Division. The deposit for sets having a large number of sheets shall be established at $1,000.00 per sheet, not to exceed $25,000.00.

III. RECORD DRAWING REQUIREMENTS

A. Water/Sewer:

1. As-built Drawings. As-built utility drawings shall be submitted to the City prior to the improvements being placed in operation.

2. Construction Drawings. Construction drawings for water and sewer improvements shall be prepared in accordance with the Design Requirements for Water and Sewer System Extensions prepared by the Utilities Division of the Department of Public Works. A plan review fee shall be paid to the water and sewer utility prior to construction drawing review. An inspection fee shall be paid to the water and sewer utility prior to construction drawing approval. Contact this utility at 556-2840 for further information on fees and amounts.

B. Engineering/Transportation: One of the important steps upon the completion of construction improvements in the City of Redmond is a submittal of Record Drawings. The drawings are important assets to the City as well to its residents and customers. They are used for many purposes, ranging from indicating what was actually constructed in the field to helping locate facilities during emergency situations.

1. *What items shall be included?:* Record drawings will show accurate locations of storm, sewer, water mains and other water appurtenances, structures, conduits, power poles, light standards, vaults, width of streets, sidewalks, landscaping areas, building footprints, channelization and pavement markings, property lines, easements, etc.

2. *What are the accuracy requirements?:* The drawing will be accurately located in state plane coordinates using NAD-83-91 survey control and tied to any 2 City of Redmond Horizontal Control Monuments. The following is a partial list of the construction items and tolerance limits to be incorporated into the Record Drawings. Other items and tolerances shall be required depending on the type of improvements constructed.

a) Surveyed Sewer and Storm water elevations..... +/-0.01'
Includes pipe invert elevations, top of castings (manholes, inlets, etc.)

b) Surveyed Water elevations..... +/-0.25'

c) Horizontal and vertical alignment..... +/-0.1'

3. *What is required from you?:* The Record Drawing delivery shall be in electronic as well as in hard copy format. Each drawing, except for the Digital file, shall bear the P.E./P.L.S. Stamp, Signature and Date and be reproduced on the following media:

a) Preliminary Submittal:

(1) Two sets of full size prints.

(2) Digital files with drawing/layer documentation.

b) Final Submittal:

(1) Full size PHOTOGRAPHIC MYLAR Sepia or Xerox mylars will not be accepted.

(2) 11"x17" PHOTOGRAPHIC MYLAR, matt finish preferred.

(3) 8-1/2"x11" PHOTOGRAPHIC NEGATIVE

(4) Three sets of full size PRINTS.

(5) Digital files with drawing/layer documentation.

4. *How does the Preliminary Record Drawing Submittal and Review Process work?:* Upon completion of improvements and prior to project acceptance, Record Drawings in digital and hard copy format shall be submitted for review and approval.

a) Submit 1 digital copy and 2 hard copy sets for review to Engineering Division, 3rd Floor, City Hall, Please call (425) 556-2735 if you have any questions.

b) If review of the preliminary Record drawings reveals errors and/or omissions, the digital files and drawings (redlines copies) will be returned to the Engineer/Surveyor for corrections. The Engineer/Surveyor shall make all corrections in the digital copy of the original construction plans and re-plot the hard copy. Please resubmit the digital files, two revised plans sets derived from the revised digital files and redlines for re-review. Upon approval of preliminary record drawings, the Engineer/Surveyor will be notified by the Public Works, Engineering department to proceed with the "Final Submittal".

5. *Who should approve the final drawings before submitting it to the City?:* The final drawings shall be prepared and stamped by a Professional Engineer and/or Professional Land Surveyor currently licensed in the State of Washington verifying that all improvements have been built in accordance with the approved construction plans and that all changes will be accurately noted in the digital file on the appropriate plan sheets and detailed drawings. The hard copy submittal derived from the digital file shall reflect these changes.

6. *What should the electronic delivery include?*

a) All sheets of the original digital construction plans with noted construction changes. The construction contractor and/or design consultant shall record all field changes and any existing utilities encountered during construction.

b) All Record Drawing changes will be made in the digital format.

c) Changes to text: invert elevations, dimensions, notes, etc. will be lined out with the Record Drawing text placed above it. Do not alter, modify or erase original approved design text.

d) Changes made to Graphic features: pipe, catch basins, hydrants, etc. shall be moved to reflect their accurate surveyed locations.

e) An overall digital site plan.

f) A detailed digital and/or hard copy list of drawing files with the corresponding layers/levels and their contents will be included with the digital drawing file. The list shall include but not be limited to: Digital File names, Drawing names (logical), Level number/Layer name and Level/Layer description.

7. Do Record Drawing changes need to be made in the Original Digital Construction Drawing?: Yes, all changes need to be made to the original City Approved digital Construction files and then re-plotted to create the hard copy submittal. Digital Record Drawings created from anything other than the digital construction drawings will not be accepted. Hand drafted changes to Mylar or paper copy submittals will not be accepted.

8. *What format should the electronic delivery be in?*

a) Digital files shall be provided in a version of MicroStation ".DGN" (preferred), or AutoCAD (". DWG" format) deemed acceptable by the City. All support files required to display or plot the files in the same manner as they were developed shall be delivered along with these files. These files include but are not limited to (MicroStation) Customized Line Styles libraries, Cell Libraries, Font Libraries, Pen Tables and Referenced Files, (AutoCAD) Block Libraries, Font Files, Menu Files, Plotter Setup and Referenced Files. Do not include P.E./P.L.S. stamps, signature and border files. Scanned hard copy drawings using raster to vector conversions will not be acceptable digital format.

b) The files will be submitted on a recordable compact disc (preferred) or MS-DOS formatted 3.5" floppy disk(s). Each disc will be labeled with the project name and the name of the company that prepared them.

c) The drawing will be at full scale. Microstation working units will be set to 1:1000 with Master units set to "ft" for site plans; The drawing will be accurately

c) Haul hours will be within the hours of 9 a.m. - 4 p.m. and 6 p.m. to 10 p.m. On Saturdays, hauling may be continuous between 9 a.m. -10 p.m. as long as it is in compliance with the City's noise ordinance.

d) The applicant shall provide street sweeping at all times during hauling.

e) The applicant shall repair and/or replace any traffic markings (i.e., buttons, arrows, etc.) damaged during the hauling operations.

f) The Public Works Director shall retain the authority to stop or reroute hauling or change hours of hauling if operating times are unsatisfactory or inclement weather adversely affects City facilities.

g) In certain circumstances, a Clearing and Grading Permit (clearing prior to having all final plans approved) may be granted prior to Building Permit issuance.

5. Construction activities may be limited or suspended during the rainy season (October 1 – April 30).

APPENDIX C

Geotechnical Report

Associated Earth Sciences, Inc.

December 7, 2000
Project No. KE00782G

Cam West Development, Inc.
9720 NE 120th Place, Suite 100
Kirkland, Washington 98034

Attention: Mr. John Harkness

Subject: Preliminary Geotechnical Engineering Report
Curry Property
11840 – 172nd Avenue NE
Redmond, Washington

Dear Mr. Harkness:

In accordance with your request, this report presents the results of our subsurface exploration and preliminary geotechnical engineering study for the proposed Curry property. Our services have been performed for the exclusive use of Cam West Development, Inc. and their agents for specific application to this project in accordance with generally accepted geotechnical engineering practice. No other warranty is expressed or implied. Our services have been performed in accordance with our confirming proposal, dated November 17, 2000.

It should be noted that this report is preliminary in nature, and is intended to provide Cam West Development, Inc. and their design team with geotechnical information needed to make site and project planning decisions. We recommend that we be allowed to complete a thorough geotechnical investigation for the project once a site layout and project design plan are prepared. The recommendations in this letter should not be used as the sole geotechnical input to a final design for the project.

SITE DESCRIPTION

The project site is located at 11840 172nd Avenue NE in Redmond, Washington. The property fronts some 985 feet on the east side of 172nd Avenue NE and extends some 630 to 830 feet to the east. The site presently supports two single-family residences, each serviced by standard utilities. One residence is abandoned and fronts 172nd Avenue NE while the other is habited and is accessed off 174th Place NE. An old barn is situated roughly in the middle of the approximately 15-acre property. The site slopes gently to the southeast on the order of 3.5 to 5.5 percent. Overall site relief is on the order of 40 feet. Vegetation on the site consisted of several open grass fields amongst a medium dense to dense forest of mixed deciduous and coniferous trees with moderately dense undergrowth. One possible wetland area has been identified in the northeast portion of the site by others.

SUBSURFACE EXPLORATION

Subsurface conditions were evaluated by excavating 10 exploration test pits (EP-1 through EP-10) on November 28, 2000 utilizing a rubber-tired backhoe under subcontract to our firm. Representative samples of subsurface soils were obtained from each exploration pit where conditions changed. The test pits were observed and logged by a geologist from our firm. The exploration logs presented in Appendix A are based on the field logs, digging action, and inspection of the samples secured. The attached Site and Exploration Plan, Figure 1 shows the approximate locations of our exploration test pits shown on the topographic and tree survey dated December 30, 1999 prepared by Concept Engineering, Inc.

SUBSURFACE CONDITIONS

Subsurface conditions at the project site were inferred from the field explorations accomplished for this study, visual reconnaissance of the site, and review of applicable geologic literature. As shown on the field logs, the explorations generally encountered a 6 to 12 inch layer of topsoil overlying glacially consolidated till deposits. The unweathered glacial till deposits generally consisted of dense to very dense, moist, gray, silty sand and some gravel. The unweathered till at depth was overlain by a weathered section consisting of medium dense, moist, brown, silty sand and some gravel. The weathered till was generally observed to a depth of 2 to 4 feet.

A review of the *Geologic Map of the Redmond Quadrangle, King County, Washington* (Minard, and Booth, 1988) indicates that the sediments encountered in our explorations are generally consistent with those identified on the referenced maps.

Ground water seepage was observed in exploration test pit EP-10 at a depth of 2½ feet at the contact between the medium dense weathered till and the dense to very dense unweathered glacial till. Orange mottling was observed in exploration pits EP-1 and EP-3 through EP-10 to a depth of 3 to 6 feet. The ground water seepage and orange mottling are indicators of a "perched" water condition. A "perched" water table occurs when surface water infiltrates down through relatively permeable soils and becomes trapped or "perched" atop a comparatively impermeable layer such as the glacial till. It should be noted that fluctuations in the level of ground water may occur due to the time of year and variations in rainfall. Once encountered during excavation, the quantity and duration of flow of perched ground water will vary depending on season and topography.

CONCLUSIONS AND RECOMMENDATIONS

This site appears generally suitable for development of the proposed new residential subdivision. Glacial till soils can be anticipated to provide good shallow foundation support for conventional shallow foundations bearing on undisturbed native soils. Till soils are also highly moisture-sensitive. If site grading were to proceed during the wet winter months, it would be necessary to expend significant effort to reduce the moisture content of excavated site soils in order to allow their reuse in structural fill applications. Moisture reduction can typically be accomplished through aeration and drying during favorable dry and warm weather, or by use of moisture reducing admixtures such as Portland cement or fly ash. If these drying measures are not or cannot be implemented, a significant portion of the site soils may not be available for reuse in structural fill applications and imported fill. Free-draining imported fill material will be required in some applications regardless of site conditions at the time of construction, such as for pavement subbase, backfilled wall drainage layers, capillary break material below floor slabs, and for footing drain backfills. It should be noted that site soils will likely have a lower moisture content during the dryer months of the year, typically mid summer through September or October. Earthwork during this time of year is expected to require less effort for drying soils with high moisture content.

FOUNDATION CONSIDERATIONS

For preliminary design purposes, allowable foundation bearing pressures of 3,000 pounds per square foot (psf) or higher can be anticipated on undisturbed native soils. If foundations are constructed above structural fill placed above suitable native soils, allowable bearing pressures should be limited to no more than 3,000 psf.

PAVEMENT CONSIDERATIONS

Till soils will provide suitable support for flexible pavements and concrete walkways; however, granular subbase courses may be required, particularly beneath heavy traffic areas

such as the main roads and entryways. Subbase course might be omitted beneath passenger car driveways and parking areas; however, reduced pavement service life could result. Final pavement design on this site should be based on an estimated California Bearing Ratio (CBR) and the minimum City of Redmond standards for the proposed level of services and use classification.

SITE GRADING

The site soils are typically silty and highly moisture sensitive. Project planning should assume that at least some of the site soils will be above optimum moisture even during dry summer months, and will require drying during favorable weather or other special treatment to prepare them for use in compacted fills. We recommend that grading at this site be scheduled only during the fall or summer, when weather conditions are typically dryer. Grading during seasonal dry weather will reduce the amount of soils that will be wetter than optimum, and will provide suitable conditions to dry the soils for later use. If site grading must proceed in the spring or winter, it is likely that less of the on-site soils will be available for reuse in compacted fills.

SITE DRAINAGE

Shallow ground water seepage was present in one of the exploration test pits completed for this study. We recommend that project plans include perimeter foundation drains for all buildings, and include contingencies for french drains to be added, if warranted, at selected locations based either on the final site layout and exploration information or on-site conditions at the time of construction. We could provide more specific recommendations for site drainage improvements when a site layout plan is available and a final geotechnical investigation has been completed.

EXISTING WELL

An existing drinking water well was observed adjacent to the vacant home at 11840 172nd Avenue NE. If this well in not incorporated into the proposed development, it should be abandoned in accordance with the State of Washington RCW 88-08-070.

CLOSURE

It has been our pleasure to provide you with this information. Should you have any questions regarding this report or other geotechnical aspects of the project, please do not hesitate to call. Upon completion of the site layout and preliminary project plans, we would be available to

provide a thorough geotechnical evaluation of the site and a final geotechnical report for the project which addresses requirements specific to the planned project.

Sincerely,
ASSOCIATED EARTH SCIENCES, INC.

Attention: Mr. John Harkness

Subject: Rockery Detail Drawing
Curry Property
11840 - 172nd Avenue NE
Redmond, Washington

Dear Mr. Harkness:

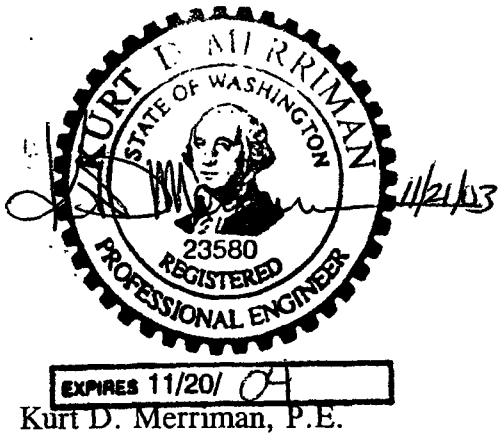
In accordance with the request of Ms. Gina Brooks of Core Design, Inc., this letter presents our recommended rockery construction detail drawing for the Curry Property project. We are familiar with the project as a result of our participation in the design, which has included completion of subsurface explorations, preparation of a geotechnical engineering report for the project, and preparation of an addendum letter containing recommendations for rockery design.

We were provided with current copies of project plan sheets 3.01 and 3.04 dated January 2003. These drawings depict rockeries up to approximately 8 feet tall facing excavation cuts on the west side of the pond basin on Tract D. The plans also depict three rockeries up to about 4 feet tall along the south property boundary that face planned structural fills.

In our opinion, the rockeries shown on the referenced plans do not require reinforcing or other special considerations if they are constructed in accordance with the recommendations contained in our December 7, 2000 geotechnical engineering report and our October 13, 2003 Rockery Addendum Letter. A rockery detail drawing that can be applied to the rockeries shown on the plans referenced above is attached with this letter.

It has been our pleasure to provide you with this information. Should you have any questions regarding this letter or other geotechnical aspects of the project, please do not hesitate to call.

Sincerely,
ASSOCIATED EARTH SCIENCES, INC.
Kirkland, Washington



Bruce W. Guenzler, P.E.G.
Project Geologist

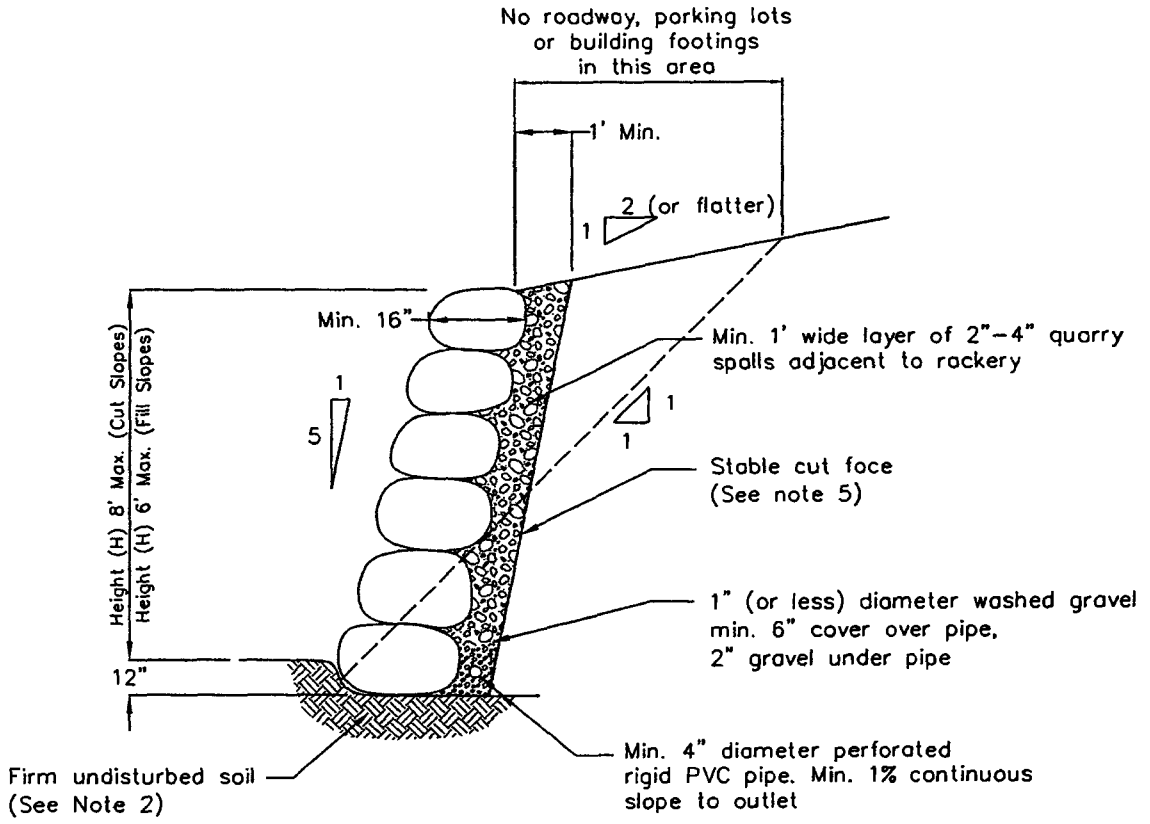
Projects\2000782\KE\WP - W2K



NOTES:

1. Rockeries higher than 5' shall be constructed of rocks of graduated sizes from 5–man to 2–man, from bottom to top. Rockeries of 5' or lower shall be constructed of 3–man to 2–man, from bottom to top.
2. Inspection of subgrade, placement of base course and drainage, and finished rockery by engineer is required.
3. Rock shall be sound and have a minimum density of 160 pounds per cubic foot.
4. The long dimension of all rocks shall be placed perpendicular to the wall. Each rock should bear on two rocks in the tier below.
5. Rockeries are erosion–control structures, not retaining walls. Natural material must be stable and free standing in cut face. Maximum height of 6 feet for rockeries facing engineered structural fill soils.
6. See text of October 13, 2003 letter report for additional recommendations.

Rock	Lb.	Avg. Dimension (In.)
1-Man	50-200	12 to 18
2-Man	200-700	18 to 28
3-Man	700-2000	28 to 36
4-Man	2000-4000	36 to 48
5-Man	4000-6000	48 to 54

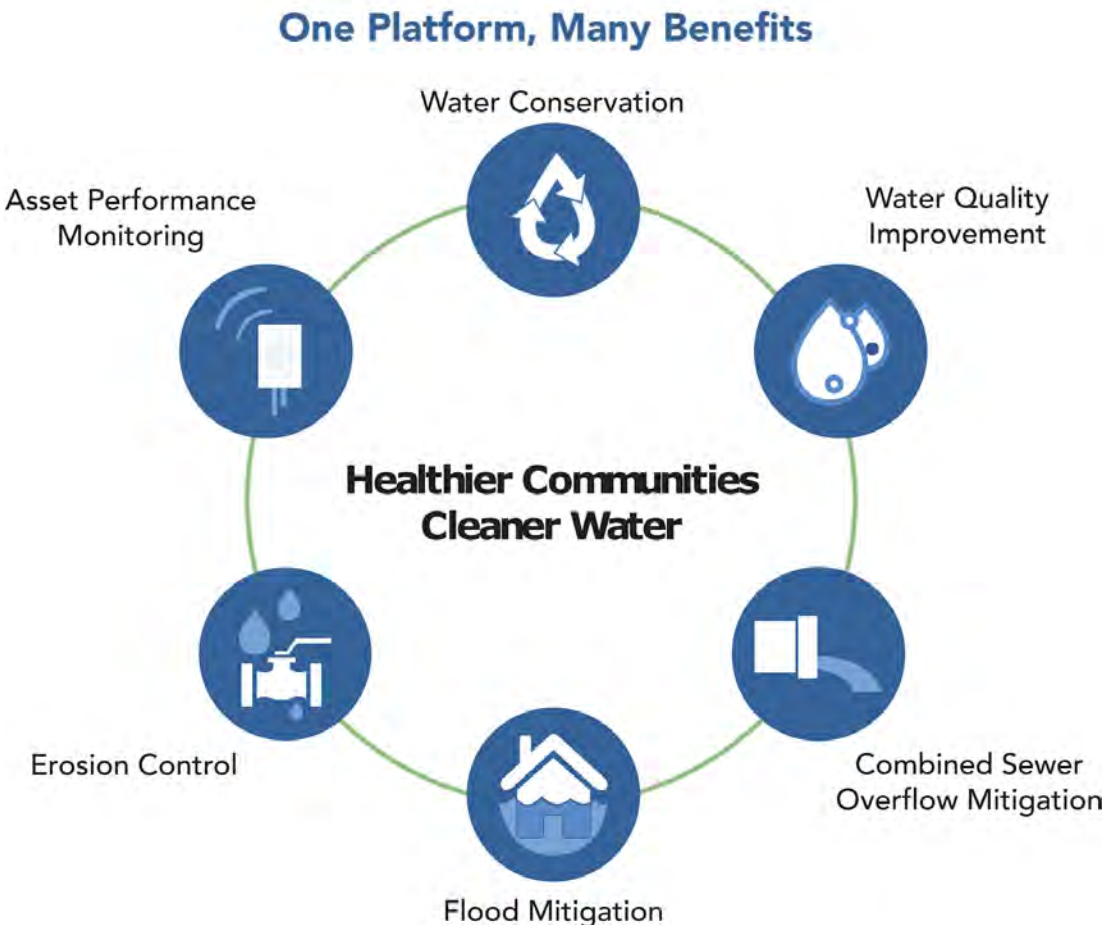
Smarter Stormwater Management

Opti provides a cloud-based platform that optimizes the collection, storage and distribution of stormwater through the Continuous Monitoring and Adaptive Control (CMAC) of stormwater infrastructure. The Opti software platform interacts with IoT (internet of things) enabled field equipment including sensors, actuated valves, SCADA systems, and pumps. A communication gateway is provided via cellular or LoRaWan technology. The combination of field equipment and software transforms traditionally passive assets into smarter resilient systems.

Our fully-automated control product leverages weather forecasts to predictively move water in advance of inclement weather, helping you get the best performance out of your investments. With over 90 parameters, the software application can be configured to meet one or more of your stormwater objectives. Opti is here to help you find peace of mind with economic and resilient solutions to water quality impairments, conservation, chronic flooding, coastal surge, sewer overflows or all of the above.



356 Boylston St, 2nd Floor
Boston, MA 02116
1-844-678-4782
www.optirtc.com

Combined Sewer Overflow (CSO) Mitigation: Opti is able to retain up to 90% of wet weather flows that cause CSO events. This is done by utilizing upstream storage more efficiently and shifting discharge timing. Most facilities within a municipality can be upgraded with Opti for significant reduction in wet weather flow, alleviating tens of millions of dollars of Capex required for new storage with similar performance.

Flood Mitigation: Opti's forecast integrated control utilizes stormwater storage more effectively. Opti automatically lowers the volume of water in a facility before an upcoming storm event, proactively adding capacity and mitigating flood risk from large storm events. In addition to pre-event drawdown, Opti can increase flood resilience in a watershed by controlling the timing of discharge from detention and retention assets to decrease the outflows during the peak downstream flooding conditions (i.e. peak shaving).

Water Quality Improvement: Opti improves water quality by increasing the average retention time in a facility by up to a factor of 10 (depending on site conditions). This increase in retention time within a facility enhances water quality by allowing additional particle settling, thus removing pollutants adhered to those sediment particles. The additional holding time also allows for more evapotranspiration, infiltration into subsurface soils, and nutrient uptake by vegetation in the facility. Opti was approved by the Chesapeake Urban Stormwater Work Group (USWG) and by the Maryland Department of the Environment (MDE) for pollutant removal efficiencies equivalent to the additional retention volumes achieved via active controls.

Asset Performance Monitoring: Communities reduce stormwater maintenance costs and improve compliance reporting with Opti's real-time monitoring and analytics. Opti provides alerting, decision support, and actionable insights to stormwater managers so that critical failures are stopped before they happen. Opti's software also integrates with third-party asset management and monitoring platforms.

Erosion Control & Hydromodification: Opti's active controls have demonstrated a 50% reduction in pulse counts and stream energy. Opti is able to discharge very low flows over a longer period of time, better emulating pre-development conditions of the watershed by using the entire storage volume of a system during small events. This is crucial for areas with erosion issues, and where stream habitat is sensitive for fish spawning and benthic organism health. Opti is approved by Washington State Technology Assessment Protocol - Ecology, better known as the TAPE program.

Water Conservation: Opti reduces capital expenditure and improves the cost-effectiveness of rainwater harvesting. With Opti, a single storage facility can be optimized for both stormwater detention and beneficial on-site use. Opti-controlled rainwater harvesting facilities have been approved nationwide to meet stormwater detention and retention requirements.

Monticello Watershed Flow-Duration Curve Modeling:

In the Monticello Watershed in the City of Redmond, WA, two existing stormwater retention ponds are currently being retrofitted with actively controlled outlets managed by Opti's active control software. Using the Western Washington Hydrology Model, flow-duration curves were developed for the two sites comparing the duration of critical flow rates using continuous rainfall data for a 61 year period (1948 - 2009). First, the potential improvement in site performance was estimated using continuous simulation of the existing stormwater basins with active controls; then additional model simulations were run to determine the equivalent sizing of a passive basin that would be needed to match the performance of the proposed active-control retrofits. **Preliminary results indicate that the existing ponds would need to more than double in size to match the flow duration curves of the proposed active control retrofits.**

Stormwater Retrofit Overview:

The two stormwater ponds considered in this analysis were the Whistler Ridge and Curry East ponds located within the City of Redmond, WA. Both ponds' contributing drainage areas are characterized by residential development with substantial portions of the watershed being directly-connected impervious surfaces. The critical range of flows for both sites was defined using a lower limit of 50% the 2 year pre-development flow rate and an upper limit of the 10 year pre-development flow rate, with the predeveloped condition defined as a forested watershed. Characteristics of the two stormwater basins and their corresponding drainage areas are shown in Table 1. In the proposed retrofits of the sites, the existing low-flow orifices will be replaced with larger butterfly valves that are actively controlled to continuously modulate outflows.

Table 1: Site Characteristics for Proposed Retrofit Ponds

	Whistler Ridge Pond	**Curry East Pond**
Active Storage Volume (ac-ft)	2.81	1.67
Drainage Area (Acres)	16.94	17.03
Impervious Area (Acres)	9.97	9.13
Passive Outlet Diameter (in)	1.70 (at 0' depth) 5.94 (at 2.99' depth) 6.48 (at 3.88' depth)	2.94 (at 0' depth) 16.2" (notch at 4' depth)
Riser Diameter (in)	24	18
Proposed Active Valve Diameter (in)	12	10
Critical Erosive Flow Range - Lower Limit (cfs)	0.249	0.250
Critical Erosive Flow Range - Upper Limit (cfs)	1.217	1.226

Methodology and Results:

Western Washington Hydrology Model (WWHM) simulations were completed for the existing conditions, the pre-development condition, and the proposed Opti control scenario at the two ponds to demonstrate benefit across the range of critical flows. To simulate Opti's control scenario, inflows to the pond from the WWHM were used as an input to a spreadsheet routing model that simulates Opti's control logic. For both the Whistler Ridge and Curry East ponds, results showed that the existing stormwater assets do not match pre-development flows across the full range of critical flows. By retrofitting the ponds with Opti's active controls, significant improvements were seen across the flow-duration curve bringing the expected performance significantly closer to pre-development conditions. Sample results from the initial Whistler Ridge Pond analysis can be seen in Figure 1, with results from Curry East Pond in Figure 2.

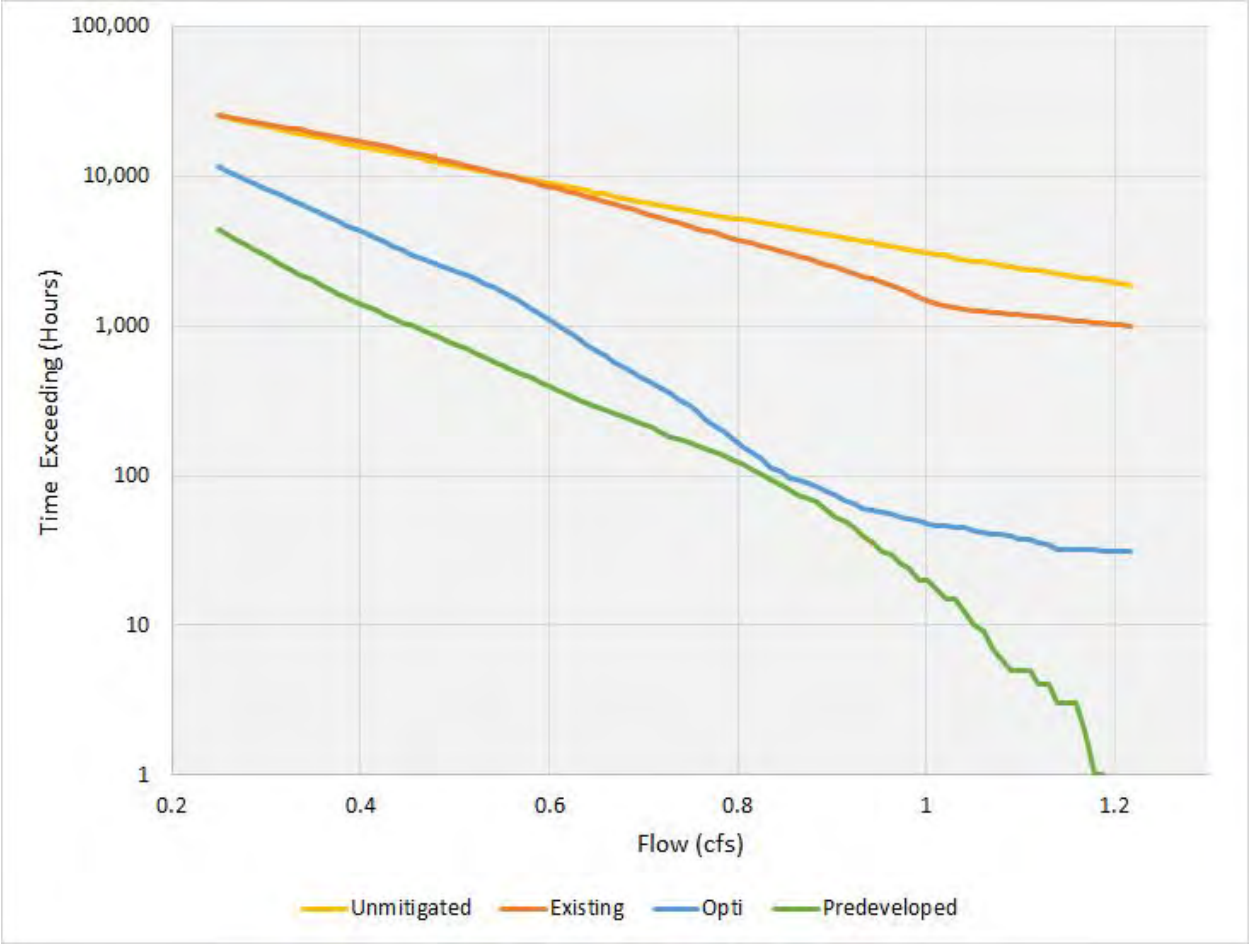


Figure 1: Whistler Ridge Flow-Duration Curve for Critical Flow Range, Existing and Proposed

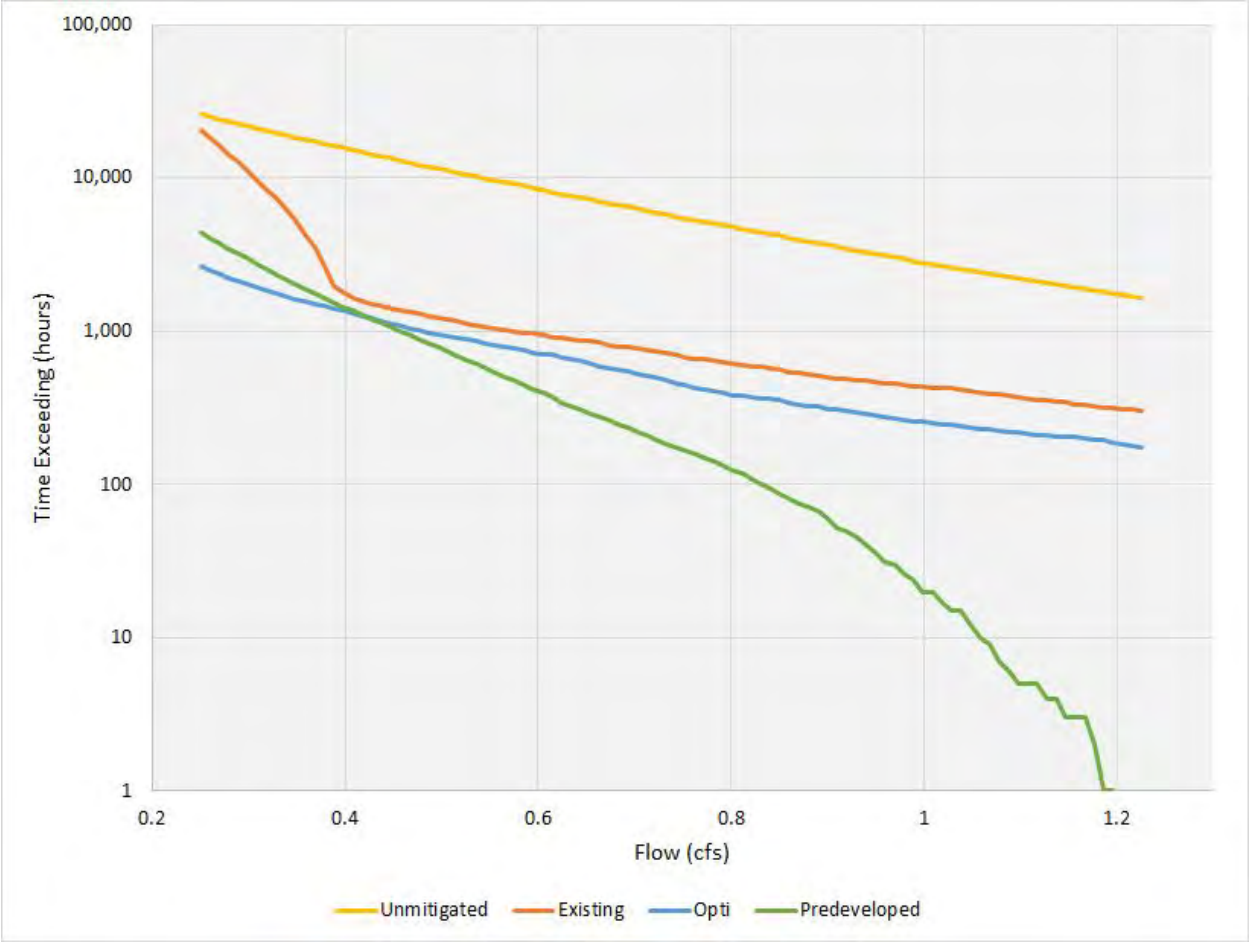

Figure 2: Curry East Flow-Duration Curve for Critical Flow Range, Existing and Proposed

To provide an equal comparison, subsequent model runs were completed to determine how much additional volume would be required in the existing ponds to match the expected performance of the existing ponds retrofitted with Opti active controls. The maximum depth of the ponds were kept constant in the passive scenarios (existing conditions with volume increased) while the footprint was expanded to increase the total volume in 10% increments. The low-flow orifice was adjusted to optimize the system flows while avoiding overflow from the pond in order to more closely match the Opti condition. A summary of the required storage volumes to replicate the performance of an Opti controlled system is shown in Table 2. For the purposes of the analysis, critical flows were assumed to range from 50% of the pre-development 2 year peak flow and the 10 year pre-development peak flow.

Table 2: Storage Volume Required for Equivalent Flow-Duration Curve Results

	Existing Volume (Used for control simulation - ac-ft)	**Required Additional Volume to match Proposed Opti Retrofit** (ac-ft)	**Percent Change**
Whistler Ridge Pond	2.81	7.03	+150%
Curry East Pond	1.67	3.51	+110%

Figures 2 and 3 show the flow-duration curves resulting from the analysis. For Whistler Ridge (Figure 3), an increase of 150% of the existing storage volume resulted in a flow-duration curve that exceeded the proposed Opti retrofit at the lower ranges of flows, but overall matched the behavior in the erosive flow range. For Curry East (Figure 4), an increase of 110% of the existing storage volume resulted in a curve that matched the shape and magnitude of the proposed Opti retrofit's results.

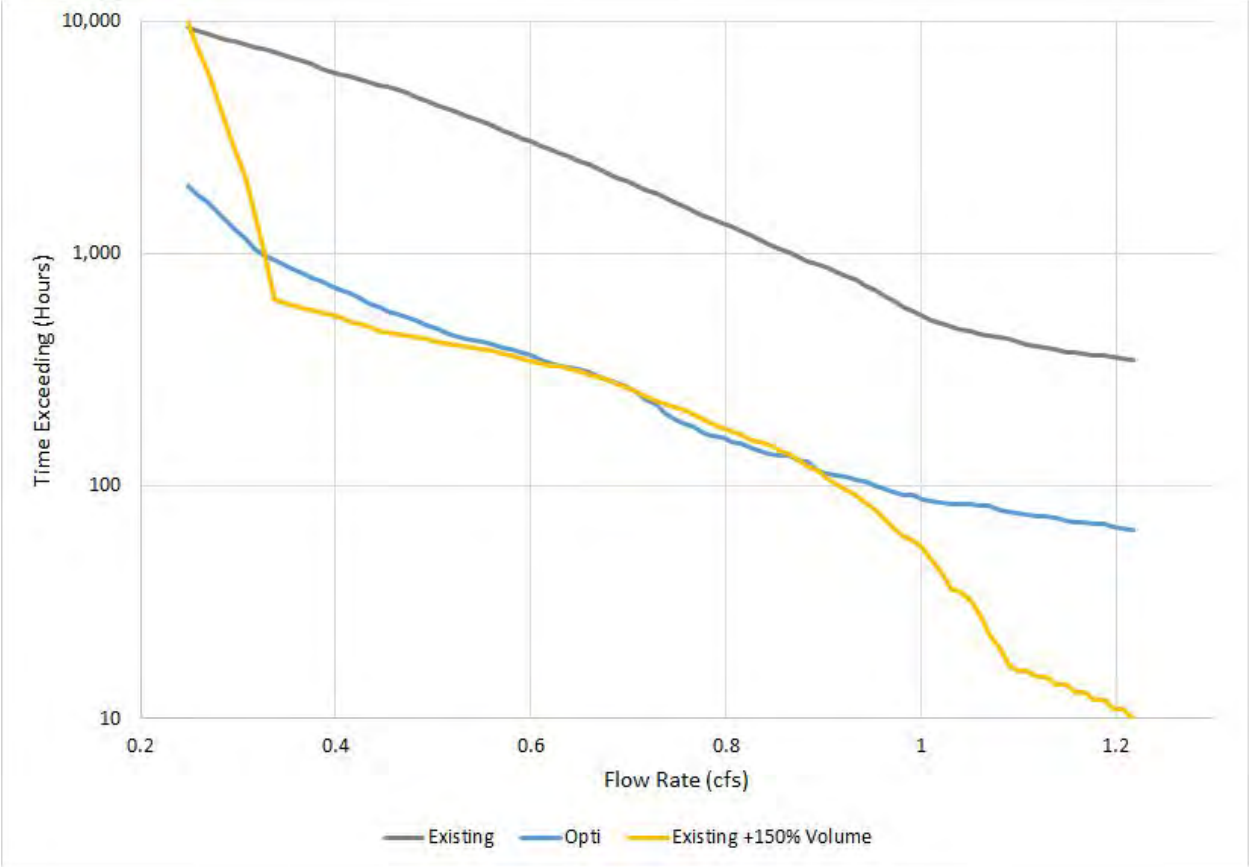

Figure 3: Flow-Duration Curve for Whistler Ridge Critical Flow Range - Existing, Opti, and Equivalent Passive Design

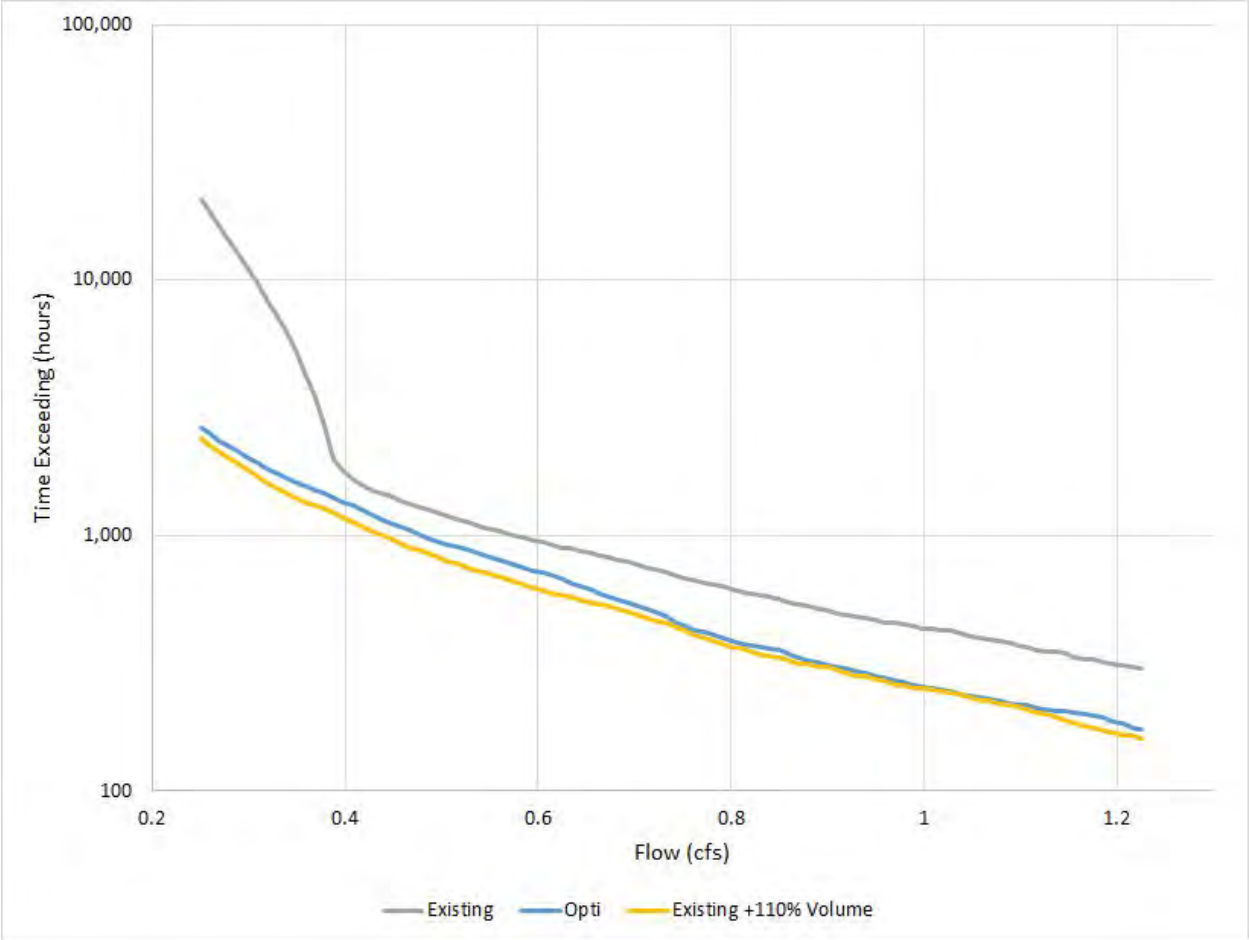

Figure 4: Flow-Duration Curve for Curry East Critical Flow Range- Existing, Opti, and Equivalent Passive Design

Conclusion

For both of the stormwater basins considered, the flow-duration curve analysis demonstrates the potential benefit and cost savings of retrofitting existing passive outlets with actively controlled outlets. By utilizing active controls on existing stormwater assets, the need for a greater basin footprint (and the costs associated with land acquisition, civil design and mass grading) is greatly reduced or eliminated. This is accomplished while achieving compliance goals and bringing peak flow rates closer to the pre-development condition. For the Whistler Ridge and Curry East Ponds, a simple retrofit of an existing passive outlet with Opti's active control equipment combined with Opti's forecast-based software, would be nearly equivalent to doubling the size of the existing ponds to achieve the same result in reduction of critical flows from the facilities.

November 1, 2018

Mr. Marcus Quigley, P.E.
Chief Executive Officer
OptiRTC Inc.
356 Boylston Street, 2nd Floor
Boston, MA 02116

RE: Continuous Monitoring and Adaptive Control (CMAC) Functional Equivalency to Detention Pond Outlet Structures

Dear Marcus Quigley:

The Washington State Department of Ecology (Ecology) finds that the OptiRTC Continuous Monitoring and Adaptive Control (CMAC) system for hydraulic control of stormwater facilities is functionally equivalent to the standard outlet control structure for wet ponds, retention ponds, and detention ponds as described in the Stormwater Management Manual for Western Washington (SWMMWW) and the Stormwater Management Manual for Eastern Washington (SWMMEW).

OptiRTC CMAC is a control approach for stormwater facilities that can be designed to conform to various design criteria. This approach does not inherently confer a certain level of service; therefore, Opti has developed a CMAC analysis tool (current version is an Excel-based extension to the Western Washington Hydrology Model (WWHM)). The Opti CMAC system must be designed using the analysis tool and must adhere to the guidelines in the manufacturers specifications. Project applicants seeking to use Opti CMAC and the CMAC-WWHM Tool must obtain design input from OptiRTC regarding Tool application and system design. Designs without detailed input from OptiRTC are not acceptable and may not be installed.

Ecology cannot endorse this product or its manufacturer. Contractors may use the Opti CMAC without seeking additional Ecology approval, however Ecology is tracking the installations of the Opti CMAC system. Local governments with a National Pollutant Discharge Elimination System (NPDES) permit shall submit the enclosed Notice of Intent Form to Ecology when installing the Opti CMAC. All other jurisdictions are also encouraged to notify Ecology when installing the Opti CMAC.

If you have questions, please contact me at your earliest convenience at (360) 407-6444 or douglas.howie@ecy.wa.gov.

Sincerely,

Douglas C. Howie, P.E.

TECHNICAL MEMORANDUM

March 2, 2023

TO: Dylan Ahearn, Associate Practice Director, Herrera

FM: Kyle Bliss, Science and Technical Support Section, Water and Land Resources Division, Department of Natural Resources and Parks

RE: RPWS Hydrologic Data QA Memo

Introduction

This memo summarizes the results of the quality assurance review of hydrologic data collected by King County Department of Natural Resources (KCDNRP), Water and Land Resources Division (WLRD), Hydrologic Monitoring Program for the Redmond Paired Watershed Study (RPWS). The period of record covered under this memo begins at the 2022 water year (10/1/2021) and ends at end of the 2022 calendar year (12/31/2022).

Two notable changes in study scope occurred during period:

- The two Evans Creek sites (EVAMS and EVALSS) were removed.
- Conductivity monitoring was discontinued.

Stream stage/discharge and water temperature were recorded at 12 sites for the study. Precipitation, air temperature, and barometric pressure were recorded at three sites. Instruments used to collect these parameters are listed in Table 1. See Figure 1 in Appendix A for station locations.

Table 1. Instruments used to measure continuous rainfall, water level (pressure), and water temperature for the RPWS from October 1, 2021 to December 31, 2022.

Quality Assurance Review of Data

Water Temperature

Continuous water temperature was generally measured with a Campbell Scientific 109UL temperature probe. Alternative instruments were used in situations where the primary 109UL malfunctioned, was buried, or went dry. Field observations of water temperature were made with a YSI Pro 30 handheld water quality instrument. If consistent differences were observed, shifts in the continuous temperature record were made to better match YSI observations. Table 2 summarizes information about water temperature data quality and data gaps.

Table 2. Notes on water temperature records for the RPWS from October 1, 2021 to December 31, 2022.

Site Code	Data Rated	Gaps*	Notes*
COLM	Good	10/1/2021 - 10/9/2021 and 8/15/2022 - 10/26/2022	Channel Dry
COUMI	Good	None

Precipitation

Precipitation was measured using Hydrological Services TB6 tipping bucket rain gages. Rain gages were visited throughout the year (generally four times per year, seasonally) to ensure that they were free of debris and functionally correctly and their calibration checked (at least once per year). At the end of the calendar year, 5-minute rainfall data was compared to adjacent rain gages in the King County network to assess variability in the timing and magnitude of precipitation.

Precipitation falling as snow or hail was recorded at the time of melting (as opposed to at the time of falling) as the cones of the tipping bucket rain gages in this study were unheated.

See Table 3 below for comment on data quality and gaps in specific precipitation data. See Figure B in Appendix A for comparison to adjacent rain gages.

Table 3. Precipitation data recorded for the RPWS from October 1, 2021 to December 31, 2022.

Site	Data Quality	Missing Data
RG_02vn (Trilogy)	Good record	No gaps
RG_EVA	Good record	No gaps
RG_MON	Good record	No gaps
RG_TOS	Fair record	Gap from 10/22/2022 to 11/9/2022 due to datalogger malfunction: Data filled from RG_MARY

Discharge

Continuous stream discharge was calculated for each stream gage using a multi-step process. First, water level (stage) at the stream gage was measured continuously using a Campbell Scientific CS451 vented pressure transducer. This continuous stage record was then converted to volumetric stream discharge using a rating curve developed through a series of simultaneous measurements of stage and discharge. Discharge measurements in the field were taken using the velocity-area method (Herschy 1993), with a HACH FH950 velocity meter.

After ratings were established, small shifts were applied to the rating to account for small changes to the stage/discharge relationship. In the event of a dramatic change to the stage/discharge relationship, new ratings were developed through additional field measurements.

QA Review Methods

While all 12 project discharge gages were updated via telemetry, ultimately the final continuous hydrologic data was input into the King County Hydrologic database with a supervised process using a desktop computer application. The technician worked from a plot (printed chart created in a spreadsheet) of the continuous values for a set period, usually four to eight weeks and bracketed by field observations. For discharge data, the water level corrections, rating table and shifts used were noted on the plot, along with explanatory notes. The plot was stored in the

project file for the gage along with field notes and other materials. Rating curve development and gage problem solving occurred in a collegial environment with the team staff. Recorded data and field measurements were reviewed throughout the year to identify problems and target necessary measurements.

Annual review of the water year was performed after the final supervised workup. Data are typically reviewed by a different team member than who performed the initial workup, but due to time and staffing constraints, review of discharge data was performed by the field technician. A spreadsheet template was used with daily mean, max and min values, rainfall, comparison gages, field observations, and a QC checklist to structure the review. The review process is described in the STREAM GAGE DATA WORKUP QA/QC section in Appendix B.

RPWS 10/1/2021 to 12/31/2022

Rainfall totals were above average at the NOVH rain gage (by water year, data from 2000-2023) in the Redmond, WA area due to a very wet winter and spring and despite an historically dry end to the water year (see Figure 1).

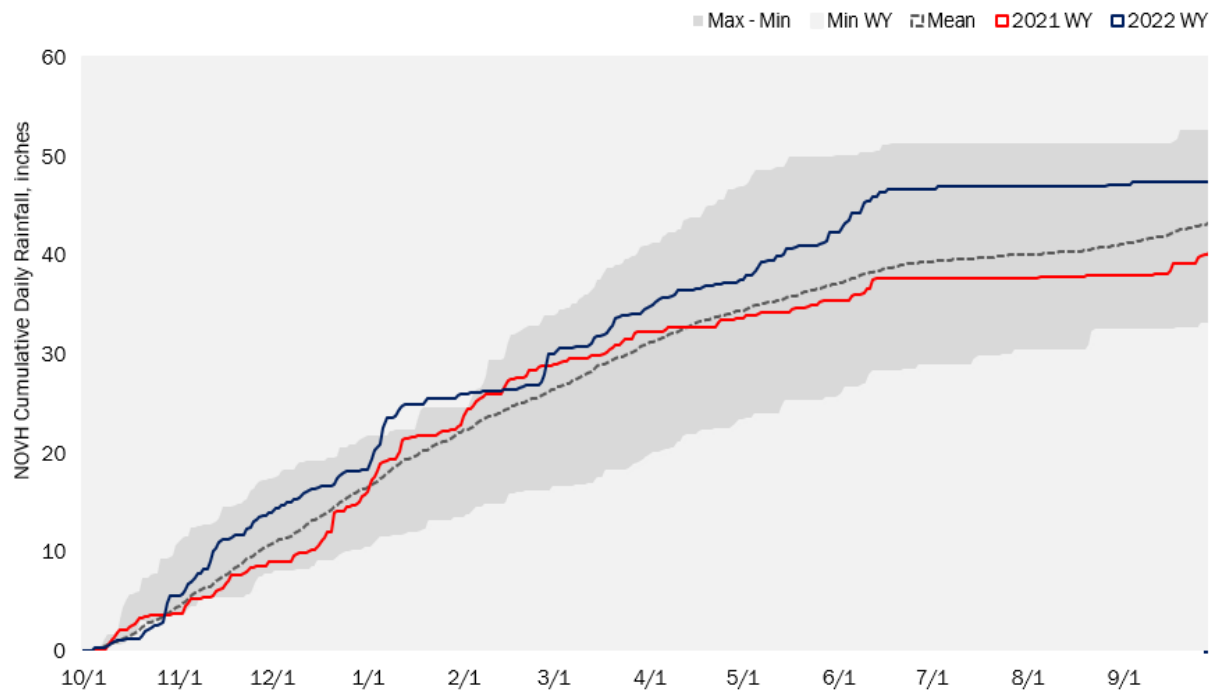

Figure 1. Cumulative rainfall at NOVH rain gage (in Redmond, WA) by water year (10/1 to 9/30). Includes data from 2000 to 2023. 2021 and 2022 water years are shown in red and blue, respectively. Average cumulative rainfall is shown in a gray dashed line. The range between the wettest and driest water years is shaded in dark gray.

The ten largest rainfall events over a 24-hour period between 10/1/2021 and 12/31/2022 are presented in Table 4 below. The largest event totaled 2.46" on 10/29/2021 which is 0.5" below the approximate 25- year 24-hour precipitation total (King County 2016).

Table 4. The ten largest 24-hour rainfall totals recorded at the Monticello rain gage (RG_MON) from October 1, 2021, to December 31, 2022.

Ending Date	24-hr. total (in)
29-Oct-21	2.46
28-Feb-22	2.18
07-Jan-22	1.75
24-Dec-22	1.71
03-Jan-22	1.52
12-Nov-21	1.39
27-Dec-22	1.17
04-Nov-21	1.14
21-Mar-22	1.04
23-Nov-22	1.02

Missing Data

Missing 5-minute discharge data may be the result of technical issues with the gage (e.g., power failure, sensor failure) or dramatic changes to the stage/discharge relationship that cannot be accounted for with an adjustment to the discharge rating curve. In the case of technical issues, 15-minute data from non-vented U20 pressure transducers were used to fill gaps where possible. See Table 5 below for a summary of missing discharge data by station.

Table 5. Periods of missing discharge data for the RPWS from October 1, 2021, to December 31, 2022.

Site	Notes*
COLM	▪Periods of no flow 10/1/2021 - 10/9/2021 and 8/15/2022 - 10/26/2022
COUMO	None
MONMN	None
MONMO	None
MONMS	▪Gap 1/7/2022 09:20 to 1/8/2022 05:35 due to sensor malfunction
SEIMN	None
SEIMS	None
TOSMI	None
TOSMO	None
TYLMI	None
TYLMO	None

Uncertain Data

Given the indirect nature of discharge data development, there are many sources of uncertainty in this process, including:

- inaccuracy of field measurements of stage and discharge
- inaccuracy of continuous stage measurements
- a rating table that poorly represents the stage/discharge relationship at the full range of stream discharge that a given stream conveys in a given time period
- changes to the stage/discharge relationship, including:
    - scour and/or fill of the stream bed during storm events
    - vegetation growth on banks or in channel
    - debris accumulating in the section of the stream channel that controls water level at the stream gage

The most common cause of uncertain flow data was instability of section controls (i.e., objects in a stream channel that control the water level at the stream gage) for stations with non-engineered hydraulics. These stations include COUMI, EVAMS, MONMN, and TYLMI. See Table 6 for a summary of data uncertainties.

Table 6. Summary of data with notable uncertainty for the RPWS from October 1, 2021, to December 31, 2022.

Site	Notes*
COLM	▪Some uncertainty around larger storm peaks - more recent high flow measurement needed.
COUMI	▪ Moderate shifts up after January 2022 events eroded channel control.
COUMO	▪ Moderate shifts down due to channel aggradation.
MONMN	▪Some uncertainty around largest storm flows.
MONMO	▪Peak flows seem relatively low.
MONMS	None
SEIMN	▪Some uncertainty around highest flows, need more recent high flows.
SEIMS	None
TOSMI	▪ Baseflow relationship with TOSMO a little too close at times in past water years but appears to be improving with rating curve development at both sites.
TOSMO	▪ Baseflow relationship with TOSMI a little too close at times in past water years but appears to be improving with rating curve development at both sites. ▪ Slight drop in stage data on 8/3/2022 left in record as not associated with staff visit.
TYLMI	▪ Section control is very wide creating poor resolution in low end of ratings. Poor relationship between baseflows at TYLMI and TYLMO noted in past improving but will continue to monitor.
TYLMO	▪Some moderate shifts in winter of 2021/2022 to match measured flows. High flows seem suspect, need to verify with manual measurement and continue to watch comps with TYLMI.

* All times listed are in Pacific Daylight Savings Time (GMT – 07:00)

Data Rating

Continuous discharge data from each station was given a rating, from poor to good, for the period beginning on October 1, 2021, and ending on December 31, 2022. See Table 7 for a summary of data quality ratings. Good data had a complete record through the period, a good number (8 – 10) of field observations at both low and high discharge conditions, and a consistent stage/discharge relationship due to a very stable or engineered control. Poor data were usually characterized a very unstable control that caused numerous rating shifts to accommodate. Extended periods where debris such as leaves, algae, or wood accumulated on controls also negatively affected the data rating as did the lack of a recent high flow or summer low flow measurement (see Table C in Appendix A for a table comparing measured vs. calculated discharge values for each station).

Table 7. Summary of discharge data quality rating from October 1, 2020, to December 31, 2021.

Site	Notes
COLM	**Fair to good record**. Channel relatively stable. Mostly small rating shifts to match flow measurements.
COUMI	**Record fair** and improving. New location stable since channel erosion event January 2022.
COUMO	**Fair record**. Moderate rating shifts to account for changes to section control. Some scour/fill apparent.
MONMN	**Fair record.** Good coverage of rating with flow measurements but some channel instability, especially around large storm flows. New ratings 10 and 10r developed to refine high end, need additional measurements to confirm.
MONMO	**Good record.** Engineered control is stable and clear of debris.
MONMS	**Good record.** Engineered control with little debris.
SEIMN	**Fair Record**. Gravel frequently builds up on weir - Rating for good when weir ramp clear of gravel however moderate (but consistent) shifts needed to correct when buildup occurs.
SEIMS	**Good Record.** Engineered control is stable, very little debris buildup. Some question of rating at higher flows near or above control.
TOSMI	**Fair to good record**. Good coverage of flow measurements and no major changes to channel. Section control prone to debris. Relationship between TOSMI and TOSMO still questionable but improving.
TOSMO	**Good record.** Stable, engineered control. Minimal debris in weir.
TYLMI	**Record fair to good**. Section control unstable and prone to debris. Lower end of rating improved with baseflow measurements this session - comparing better to TYLMO.
TYLMO	**Fair record.** Good coverage with flow measurements. Some channel instability around larger storm events. Lower end of rating improved with baseflow measurements this session, will target larger events to confirm upper end.

TYLMO	2.3	10.9	14.6

* time period where flow measurements were taken to develop ratings used to develop data from 10/1/2020 to 12/31/2021
**length of time from start of RPWS project to most recent measurements

Table C. Table of maximum discharge measurements (for differing time periods) and maximum calculated discharge record. Maximum calculated discharge record in session values is highlighted in yellow if they are more than two times the maximum volume measured in the field during the time period used to develop the current stage/discharge ratings and highlighted in red if the values is double the volume ever measured in the field during the entirety of the RPWS project. Note that SEIMN and SEIMS both have engineered controls and older high flow measurements are still valuable.

APPENDIX B: STREAM GAGE DATA WORKUP QA/QC DESCRIPTION

A streamflow data workup should be checked by another technician before approving the data for publication. This is not a rote process or simple checklist. It requires an understanding of the basic elements of a data workup as well as a questioning attitude. The check can go pretty quickly if the person doing the original workup has taken good notes, kept the file in good order, made the necessary graphs and reports, and did not make any mistakes. The QA/QC check should be performed by someone other than the person who did the original workup. This ensures that we get a realistic assessment of the coherence and legibility of the workup and documentation. We want to be able to return to the file at a later date and figure out how the flow data were derived from the primary data. We also want to make sure that the data make sense and contain no errors. Of course we will never know if our flow data are accurate, but we can know that they are the best numbers possible if rating tables are well developed and the rating properly applied to a carefully corrected stage record. The following steps are outlined in the order they should occur.

Three Objectives

1. Well documented work, so in the future we can figure out what was done and why. If the file and notes are a mess and don't make sense, you give it back and tell them to get it together.
2. Careful work, i.e., no stupid or gross mistakes. No gaps, no big jumps in discharge when there shouldn't be, flow in data table matches the discharge measurement made at that time, sensor garbage is cleaned up. Stupid mistake example: the flow record changes 15% in one log between sessions because the initial sensor correction was set incorrectly.
3. Technically defensible work, no errors in judgment. Rating curves make sense, stage corrections are reasonable, rating shifts applied appropriately, estimated periods make sense.

QA/QC steps to checking flow records

Documentation

There may be some minor problems with the file organization that did not affect the workup quality. These the checker can fix. Make sure that:

- The paper file is organized correctly
- There is a workup cover sheet with session-by-session notes
- Workup charts are all there and gaps noted, workup detail is written on the chart
- Discharge Measurement Summary form is up to date
- Flows are correctly plotted on rating curve
- Data input files are stored correctly
- Water year QA spreadsheet is complete (use StreamGage_WaterYear_Report.xlsx template). Charts titles should be correct, rain gage and comparison gage data included, also any continuous water temperature or other water quality data if applicable.

Look for mistakes

- Is water year complete? Complete 15-minute years have 35,040 records, leap years 35,136 (5 minute have 105,120). Missing data will reduce that number. The logs for the year are displayed on the workup screen. Also, missing data will be held with asterisks in the 15-minute report. Dump the report into excel and sort by value.
- Compare the graph of the daily mean and max flow to that of an equivalent gage. You're looking at the timing and relative magnitude of peaks and low flow periods.
- Examine daily mean and min flows chart. You're looking for periods where the flow drops unrealistically, usually due to sensor problems, a negative value, or a mistaken filled value.
- Check the data table at date and time of discharge measurements. The record should match the flow or there should be a good reason why in the notes.
- Check the plotting of each flow measurement on the rating curve. Sometimes the offset is incorrectly added or just it's just put in the wrong place. It can look right and be wrong, so check.
- Give flow measurements a once over to make sure they are sensible, V*A = Q, the calculated width seems right given the start and end of the cross section. Pay special attention to high flow measurements or any flow that shifts off the normal rating.
- Does the flow record connect well? No unjustified jumps in the discharge between sessions, stage corrections or other events.
- Are estimate periods flagged correctly

Technical quality

- Can you understand what rating curves were used, and what they are based on? What defines the high end?
- If the high end depends on a curve extension, are there indirect discharge calculations made to justify the peak flow estimate? Do you agree? This is a highly subjective area that bears careful examination. We expect, of course, that consultation was done during the initial workup, so there will be no big surprises.
- Are base flows accurate? It may be more accurate to estimate low flow periods or fill the stage record than use stage record with known error.
- Check how daily flow estimates to fill gaps were made.
- Compare mean daily discharge with an appropriate nearby station for timing and magnitude of peaks, baseflow etc.

Final approval

If everything is in order, or after corrections have been made, complete QC checklist sheet in the Water Year spreadsheet. Printout checklist for the paper file. Include name and date.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2110-210

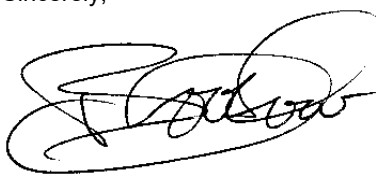
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on October 22, 2021.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: November 2, 2021
Samples Submitted: October 22, 2021
Laboratory Reference: 2110-210
Project: 14-05806-000

Case Narrative

Samples were collected on October 21 and 22, 2021 and received by the laboratory on October 22, 2021. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Date of Report: November 2, 2021
Samples Submitted: October 22, 2021

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Your samples were received on Friday, October 22, 2021. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Bartish		
Meter:	ProDSS #1		
Date/Time:	10/8/21		16:00
Barometric Pressure Start of Day:	mmHg: 765.4	Time:	16:00
Barometric Pressure End of Day:	mmHg: 765.3	Time:	16:15

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	7.8	0	22.4	
Conductivity (µS/cm)	1046	1,000	22.8	
Conductivity (µS/cm)	102.7	100	22.5	
DO % Saturation	99.9	100	22.0	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	2.1	0	22.8	
Conductivity (µS/cm)	104.5	100	24.2	
DO % Saturation	100.2	100	22.6	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Bortin		
Meter:	ProDSS #2		
Date/Time:	10/12/21		16:00
Barometric Pressure Start of Day:	mmHg: 765.5	Time:	16:00
Barometric Pressure End of Day:	mmHg: 765.5	Time:	16:15

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	7.8	0	23.2	
Conductivity (µS/cm)	1010	1,000	23.5	
Conductivity (µS/cm)	102.6	100	23.3	
DO % Saturation	100.6	100	22.8	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.8	0	23.6	
Conductivity (µS/cm)	106.2	100	23.3	
DO % Saturation	100.1	100	23.5	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2110-282

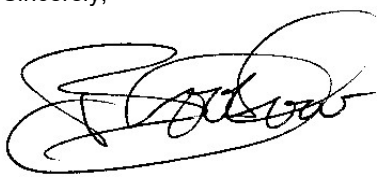
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on October 29, 2021.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: November 12, 2021
Samples Submitted: October 29, 2021
Laboratory Reference: 2110-282
Project: 14-05806-000

Case Narrative

Samples were collected on October 28, 2021 and received by the laboratory on October 29, 2021. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Your samples were received on Friday, October 29, 2021. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Burton		
Meter:	ProDSS #2		
Date/Time:	10/28/21		12:00
Barometric Pressure Start of Day:	mmHg: 764.0	Time:	12:00
Barometric Pressure End of Day:	mmHg: 764.1	Time:	12:15

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	4.8	0	23.5	
Conductivity (µS/cm)	967	1,000	23.7	
Conductivity (µS/cm)	102.8	100	23.7	
DO % Saturation	100.6	100	23.5	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.0	0	23.3	
Conductivity (µS/cm)	97.8	100	23.3	
DO % Saturation	100.1	100	23.2	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Bartlett		
Meter:	Pro DSS #1		
Date/Time:	10/28/24		12:00
Barometric Pressure Start of Day:	mmHg: 767.9	Time:	12:00
Barometric Pressure End of Day:	mmHg: 763.9	Time:	12:15

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	3.7	0	22.6	
Conductivity (µS/cm)	1001	1,000	22.9	
Conductivity (µS/cm)	1024	100	22.9	
DO % Saturation	100.1	100	22.5	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.9	0	22.5	
Conductivity (µS/cm)	96.0	100	22.3	
DO % Saturation	100	100	22.7	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2111-138

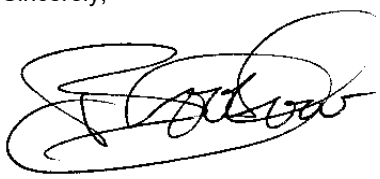
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on November 12, 2021.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: November 24, 2021
Samples Submitted: November 12, 2021
Laboratory Reference: 2111-138
Project: 14-05806-000

Case Narrative

Samples were collected on November 11, 2021 and received by the laboratory on November 12, 2021. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Your samples were received on Friday, November 12, 2021. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Bates		
Meter:	ProDSS #2		
Date/Time:	11/11/21		13:50
Barometric Pressure Start of Day:	mmHg: 767.6	Time:	13:50
Barometric Pressure End of Day:	mmHg: 767.6	Time:	14:20

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.5	0	23.3	
Conductivity (µS/cm)	986	1,000	23.5	
Conductivity (µS/cm)		100		
DO % Saturation	100.1	100	21.0	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.3	0	23.4	
Conductivity (µS/cm)	—	100	—	No solution
DO % Saturation	102.7	100	22.1	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Brown		
Meter:	ProDSS #1		
Date/Time:	11/11/21		13:50

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled; NR – not reported

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2112-270

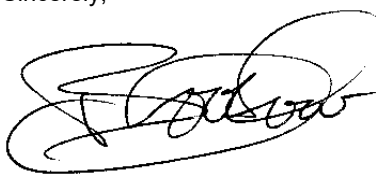
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on December 29, 2021.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: January 21, 2022
Samples Submitted: December 29, 2021
Laboratory Reference: 2112-270
Project: 14-05806-000

Case Narrative

Samples were collected on December 29, 2021 and received by the laboratory on December 29, 2021. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Your samples were received on Monday, January 3, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Bartish		
Meter:	Pro DSS #1		
Date/Time:	12/21/21		12:40
Barometric Pressure Start of Day:	mmHg: 760.2	Time:	12:40
Barometric Pressure End of Day:	mmHg: 760.0	Time:	12:55

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	3.1	0	21.2	
Conductivity (µS/cm)	998	1,000	22.4	
Conductivity (µS/cm)	—	100	—	Duly in 100 shipment
DO % Saturation	98.4	100	21.1	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	2.3	0	21.2	
Conductivity (µS/cm)	—	100	—	
DO % Saturation	101.0	100	21.2	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Bartish		
Meter:	ProDSS #2		
Date/Time:	12/29/21		12:40
Barometric Pressure Start of Day:	mmHg: 760.3	Time:	12:40
Barometric Pressure End of Day:	mmHg: 760.0	Time:	12:55

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	5.3	0	22.1	
Conductivity (µS/cm)	998	1,000	23.2	
Conductivity (µS/cm)	—	100	—	"
DO % Saturation	109.7	100	21.8	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.6	0	22.0	
Conductivity (µS/cm)	—	100	—	"
DO % Saturation	101.9	100	22.1	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2201-042

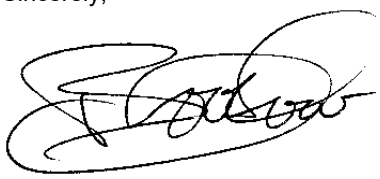
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on January 6, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: January 21, 2022
Samples Submitted: January 6, 2022
Laboratory Reference: 2201-042
Project: 14-05806-000

Case Narrative

Samples were collected on January 6, 2022 and received by the laboratory on January 6, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Your samples were received on Friday, January 7, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Bartish		
Meter:	ProDSS 2		
Date/Time:	1/5/22		14:30
Barometric Pressure Start of Day:	mmHg: 768.7	Time:	15:30
Barometric Pressure End of Day:	mmHg:	Time:	

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	2.0	0	19.6	
Conductivity (µS/cm)	1006	1,000	22.3	
Conductivity (µS/cm)	—	100	—	11
DO % Saturation	101.9	100	22.2	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.7	0	21.7	
Conductivity (µS/cm)	—	100	—	
DO % Saturation	109.2	100	21.3	11

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2202-221

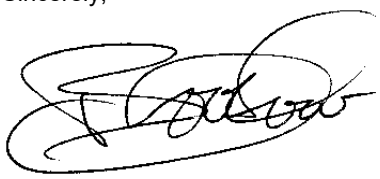
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on February 17, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: March 3, 2022
Samples Submitted: February 17, 2022
Laboratory Reference: 2202-221
Project: 14-05806-000

Case Narrative

Samples were collected on February 17, 2022 and received by the laboratory on February 17, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: BLAIR GOODROW

Dear BLAIR GOODROW:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
COUMO-20220217	Water	22-A002241	Micro, NUT
COUMI-20220217	Water	22-A002242	Micro, NUT

SEIMS-20220217	Water	22-A002252	Micro, NUT
QA-115-20220217	Water	22-A002253	Micro, NUT

Your samples were received on Thursday, February 17, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 02-221

Initiated by: NB

Date Initiated: 2/17/22

1.0 Cooler Verification

1.1 Were there custody seals on the outside of the cooler?	Yes	(No)	N/A	1 2 3 4	
1.2 Were the custody seals intact?	Yes	No	(N/A)	1 2 3 4	
1.3 Were the custody seals signed and dated by last custodian?	Yes	No	(N/A)	1 2 3 4	
1.4 Were the samples delivered on ice or blue ice?	(Yes)	No	N/A	1 2 3 4	
1.5 Were samples received between 0-6 degrees Celsius?	(Yes)	No	N/A	Temperature:	5, 3, 4
1.6 Have shipping bills (if any) been attached to the back of this form?	Yes	(N/A)			
1.7 How were the samples delivered?	(Client)	Courier	UPS/FedEx	OSE Pickup	Other

2.0 Chain of Custody Verification

2.1 Was a Chain of Custody submitted with the samples?	(Yes)	No	1 2 3 4	
2.2 Was the COC legible and written in permanent ink?	(Yes)	No	1 2 3 4	
2.3 Have samples been relinquished and accepted by each custodian?	(Yes)	No	1 2 3 4	
2.4 Did the sample labels (ID, date, time, preservative) agree with COC?	(Yes)	No	1 2 3 4	
2.5 Were all of the samples listed on the COC submitted?	(Yes)	No	1 2 3 4	
2.6 Were any of the samples submitted omitted from the COC?	Yes	(No)	1 2 3 4	

3.0 Sample Verification

3.1 Were any sample containers broken or compromised?	Yes	(No)		1 2 3 4	
3.2 Were any sample labels missing or illegible?	Yes	(No)		1 2 3 4	
3.3 Have the correct containers been used for each analysis requested?	(Yes)	No		1 2 3 4	
3.4 Have the samples been correctly preserved?	(Yes)	No	N/A	1 2 3 4	
3.5 Are volatiles samples free from headspace and bubbles greater than 6mm?	Yes	No	(N/A)	1 2 3 4	
3.6 Is there sufficient sample submitted to perform requested analyses?	(Yes)	No		1 2 3 4	
3.7 Have any holding times already expired or will expire in 24 hours?	(Yes)	No		1 2 3 4	
3.8 Was method 5035A used?	Yes	No	(N/A)	1 2 3 4	
3.9 If 5035A was used, which sampling option was used (#1, 2, or 3).	#		(N/A)	1 2 3 4	

Explain any discrepancies:

3.7) Fecals will expire.

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N. Orlock		
Meter:	ProDSS #72		
Date/Time:	2/9/22		1400
Barometric Pressure Start of Day:	mmHg: 779.8	Time:	1400
Barometric Pressure End of Day:	mmHg: 779.8	Time:	14:25

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.0	0	22.4	
Conductivity (µS/cm)	982	1,000	23.1	
Conductivity (µS/cm)	1424	~~100~~ 1409	22.8	Calibrating to 1409 due to supply chain
DO % Saturation	106.1	100	23.4	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.4	0	21.4	
Conductivity (µS/cm)	1409	~~100~~ 1409	22.4	11
DO % Saturation	100.1	100	22.0	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled; NR – not reported

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2202-387

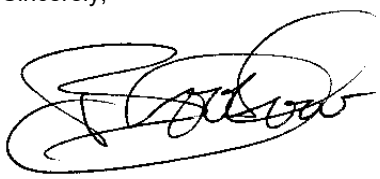
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on February 28, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: March 14, 2022
Samples Submitted: February 28, 2022
Laboratory Reference: 2202-387
Project: 14-05806-000

Case Narrative

Samples were collected on February 28, 2022 and received by the laboratory on February 28, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
COUMO-20220228	Water	22-A002749	Micro, NUT
COUMI-20220228	Water	22-A002750	Micro, NUT
TOSMO-20220228	Water	22-A002751	Micro, NUT

SEIMS-20220228	Water	22-A002760	Micro, NUT
QA116-20220228	Water	22-A002761	Micro, NUT

Your samples were received on Tuesday, March 1, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 02-387

Initiated by: MV

Date Initiated: 2/28/22

1.0 Cooler Verification

1.1 Were there custody seals on the outside of the cooler?	Yes	(No)	N/A	1 2 3 4	
1.2 Were the custody seals intact?	Yes	No	(N/A)	1 2 3 4	
1.3 Were the custody seals signed and dated by last custodian?	Yes	No	(N/A)	1 2 3 4	
1.4 Were the samples delivered on ice or blue ice?	(Yes)	No	N/A	1 2 3 4	
1.5 Were samples received between 0-6 degrees Celsius?	(Yes)	No	N/A	Temperature:	4, 3, 4
1.6 Have shipping bills (if any) been attached to the back of this form?	Yes	(N/A)			
1.7 How were the samples delivered?	(Client)	Courier	UPS/FedEx	OSE Pickup	Other

2.0 Chain of Custody Verification

2.1 Was a Chain of Custody submitted with the samples?	(Yes)	No		1 2 3 4
2.2 Was the COC legible and written in permanent ink?	(Yes)	No		1 2 3 4
2.3 Have samples been relinquished and accepted by each custodian?	(Yes)	No		1 2 3 4
2.4 Did the sample labels (ID, date, time, preservative) agree with COC?	Yes	(No)		1 2 3 4
2.5 Were all of the samples listed on the COC submitted?	(Yes)	No		1 2 3 4
2.6 Were any of the samples submitted omitted from the COC?	Yes	(No)		1 2 3 4

3.0 Sample Verification

3.1 Were any sample containers broken or compromised?	(Yes)	No		1 2 3 4
3.2 Were any sample labels missing or illegible?	(Yes)	No		1 2 3 4
3.3 Have the correct containers been used for each analysis requested?	Yes	(No)		1 2 3 4
3.4 Have the samples been correctly preserved?	Yes	(No)	N/A	1 2 3 4
3.5 Are volatiles samples free from headspace and bubbles greater than 6mm?	Yes	No	(N/A)	1 2 3 4
3.6 Is there sufficient sample submitted to perform requested analyses?	(Yes)	No		1 2 3 4
3.7 Have any holding times already expired or will expire in 24 hours?	(Yes)	No		1 2 3 4
3.8 Was method 5035A used?	Yes	(No)	N/A	1 2 3 4
3.9 If 5035A was used, which sampling option was used (#1, 2, or 3).	#		(N/A)	1 2 3 4

Explain any discrepancies:

2.4 & 3.2) #2, 4, 7, 9, 10, 13) ID illegible
3.1, 3.3, 3.4) DOC poly not submitted. 2 - Dissolved Cu & Zn submitted.
3.7) Fecal Coliform will expire in 24 hrs

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	N Bartlett		
Meter:	Pro DSS #2		
Date/Time:	2/28/22		
Barometric Pressure Start of Day:	mmHg: 761.4	Time:	10:00
Barometric Pressure End of Day:	mmHg:	Time:	10:10

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	3.9	0	21.1	
Conductivity (µS/cm)	1030	1,000	19.6	
Conductivity (µS/cm)	100.7	100	17.1	
DO % Saturation	100.1	100	22.7	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)		0		
Conductivity (µS/cm)		100		
DO % Saturation		100		

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

[1] If the sample or duplicate value is less than five times the reporting limit, the difference is calculated rather than the relative percent difference (RPD). The QA goal is a difference <2 times the detection limit instead of the number indicated in the goal column.

NA – not applicable or not available; NC – not calculable due to one or more values below the detection limit; NS – field duplicate not sampled; NR – not reported

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2203-161

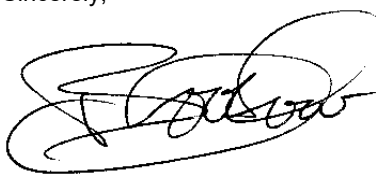
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on March 14, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: March 28, 2022
Samples Submitted: March 14, 2022
Laboratory Reference: 2203-161
Project: 14-05806-000

Case Narrative

Samples were collected on March 14, 2022 and received by the laboratory on March 14, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
COUMO-20220314	Water	22-A003578	Micro, NUT
COUMI-20220314	Water	22-A003579	Micro, NUT

QA117-20220314	Water	22-A003590	Micro, NUT

Your samples were received on Tuesday, March 15, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000
Personnel Performing Calibration:	David G.
Meter:	ProDSS #2
Date/Time:	3/14/22 1:45
Barometric Pressure Start of Day:	mmHg: 766.8 Time: 1:45
Barometric Pressure End of Day:	mmHg: Time:

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	6.3	0	21.5	
Conductivity (µS/cm)	985	1,000	21.9	
Conductivity (µS/cm)	98.4	100	21.8	
DO % Saturation	102	100	21.8	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)		0		
Conductivity (µS/cm)		100		
DO % Saturation		100		

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2204-205

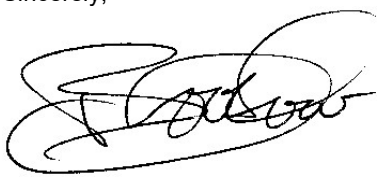
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on April 19, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: May 12, 2022
Samples Submitted: April 19, 2022
Laboratory Reference: 2204-205
Project: 14-05806-000

Case Narrative

Samples were collected on April 18, 2022 and received by the laboratory on April 19, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: BLAIR GOODROW

Dear BLAIR GOODROW:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST

QA118-20220418	Water	22-A006020	Micro, NUT

Your samples were received on Tuesday, April 19, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

Sample/Cooler Receipt and Acceptance Checklist

Client: HEC

Client Project Name/Number: 14-05806-000

OnSite Project Number: 04-205

Initiated by: NB

Date Initiated: 4/19/22

1.0 Cooler Verification

1.1 Were there custody seals on the outside of the cooler?	Yes	(No)	N/A	1 2 3 4	
1.2 Were the custody seals intact?	Yes	No	(N/A)	1 2 3 4	
1.3 Were the custody seals signed and dated by last custodian?	Yes	No	(N/A)	1 2 3 4	
1.4 Were the samples delivered on ice or blue ice?	(Yes)	No	N/A	1 2 3 4	
1.5 Were samples received between 0-6 degrees Celsius?	(Yes)	No	N/A	Temperature:	5,6,4,5
1.6 Have shipping bills (if any) been attached to the back of this form?	Yes	(N/A)			
1.7 How were the samples delivered?	(Client)	Courier	UPS/FedEx	OSE Pickup	Other

2.0 Chain of Custody Verification

2.1 Was a Chain of Custody submitted with the samples?	(Yes)	No	1 2 3 4
2.2 Was the COC legible and written in permanent ink?	(Yes)	No	1 2 3 4
2.3 Have samples been relinquished and accepted by each custodian?	(Yes)	No	1 2 3 4
2.4 Did the sample labels (ID, date, time, preservative) agree with COC?	Yes	(No)	1 2 3 4
2.5 Were all of the samples listed on the COC submitted?	(Yes)	No	1 2 3 4
2.6 Were any of the samples submitted omitted from the COC?	Yes	(No)	1 2 3 4

3.0 Sample Verification

3.1 Were any sample containers broken or compromised?	Yes	(No)		1 2 3 4
3.2 Were any sample labels missing or illegible?	Yes	(No)		1 2 3 4
3.3 Have the correct containers been used for each analysis requested?	(Yes)	No		1 2 3 4
3.4 Have the samples been correctly preserved?	(Yes)	No	N/A	1 2 3 4
3.5 Are volatiles samples free from headspace and bubbles greater than 6mm?	Yes	No	(N/A)	1 2 3 4
3.6 Is there sufficient sample submitted to perform requested analyses?	(Yes)	No		1 2 3 4
3.7 Have any holding times already expired or will expire in 24 hours?	Yes	(No)		1 2 3 4
3.8 Was method 5035A used?	Yes	No	(N/A)	1 2 3 4
3.9 If 5035A was used, which sampling option was used (#1, 2, or 3).	#		(N/A)	1 2 3 4

Explain any discrepancies:

2.4) #1 - All labels read 16:05.

1 - Discuss issue in Case Narrative

2 - Process Sample As-is

3 - Client contacted to discuss problem

4 - Sample cannot be analyzed or client does not wish to proceed

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000
Personnel Performing Calibration:	David Garcia
Meter:	Pro DSS #2
Date/Time:	4/18/22 11:50
Barometric Pressure Start of Day:	mmHg: 756.4 Time: 11:50
Barometric Pressure End of Day:	mmHg: 761.5 Time: 20:00

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.8	0	20.9	
Conductivity (µS/cm)	1040	1,000	21.3	
Conductivity (µS/cm)	96.2	100	21.4	
DO % Saturation	101.9	100	21.4	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.7	0	21.7	
Conductivity (µS/cm)	99.5	100	23.6	
DO % Saturation	103	100	23.5	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000
Personnel Performing Calibration:	David Garcia
Meter:	Pro DSS #1
Date/Time:	4/18/22 11:37
Barometric Pressure Start of Day:	mmHg: 756 Time: 11:37
Barometric Pressure End of Day:	mmHg: 761.3 Time: 20:00

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.7	0	20.3	
Conductivity (µS/cm)	1008	1,000	20.4	
Conductivity (µS/cm)	96.1	100	20.5	
DO % Saturation	102.5	100	20.5	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.0	0	20.9	
Conductivity (µS/cm)	100.5	100	22.6	
DO % Saturation	103.7	100	22.6	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2205-063

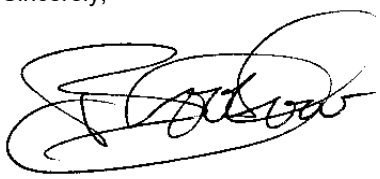
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on May 5, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: May 25, 2022
Samples Submitted: May 5, 2022
Laboratory Reference: 2205-063
Project: 14-05806-000

Case Narrative

Samples were collected on May 5, 2022 and received by the laboratory on May 5, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Suspended Solids SM 2540D Analysis

The Method Blank inadvertently had a lesser amount of DI water filtered, causing a higher PQL. All the samples had the correct amount of sample filtered, giving the correct PQL.

Turbidity EPA 180.1 Analysis

The duplicate RPD is outside control limits due to sample inhomogeneity.

Please note that any other QA/QC issues associated with these extractions and analyses will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Redmond, WA 98052
Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
COUMO-2022050	Water	22-A007260	Micro, NUT
COUMI-2022050	Water	22-A007261	Micro, NUT
TOSMO-2022050	Water	22-A007262	Micro, NUT
TYLMO-2022050	Water	22-A007263	Micro, NUT
TYLMI-2022050	Water	22-A007264	Micro, NUT
MONMN-2022050	Water	22-A007265	Micro, NUT
MONMS-2022050	Water	22-A007266	Micro, NUT
MONM-2022050	Water	22-A007267	Micro, NUT
TOSMI-2022050	Water	22-A007268	Micro, NUT
SEIMN-2022050	Water	22-A007269	Micro, NUT
COLM-2022050	Water	22-A007270	Micro, NUT
SEIMS-2022050	Water	22-A007271	Micro, NUT
QA-119-2022050	Water	22-A007272	Micro, NUT

Your samples were received on Friday, May 6, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	D. Garcia		
Meter:	PROPSS #1		
Date/Time:	5/4/22	4:20	
Barometric Pressure Start of Day:	mmHg:	Time:	
Barometric Pressure End of Day:	mmHg: 759.0	Time: 15:55	

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.9	0	21.9	
Conductivity (µS/cm)	1040	1,000	22.3	
Conductivity (µS/cm)	97.4	100	22.7	
DO % Saturation	100.7	100	22.7	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)		0		
Conductivity (µS/cm)		100		
DO % Saturation		100		

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000		
Personnel Performing Calibration:	D. Garcia		
Meter:	pro DSS #2		
Date/Time:	5/4/22	4:33	
Barometric Pressure Start of Day:	mmHg:	Time:	
Barometric Pressure End of Day:	mmHg: 757.3	Time: 15:45	

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.6	0	22.0	
Conductivity (µS/cm)	1013	1,000	23.1	
Conductivity (µS/cm)	95.6	100	23.6	
DO % Saturation	101.9	100	23.6	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)		0		
Conductivity (µS/cm)		100		
DO % Saturation		100		

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2205-263

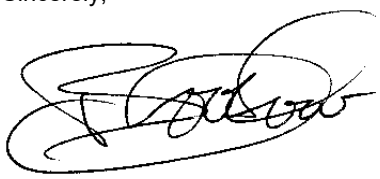
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on May 24, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: June 21, 2022
Samples Submitted: May 24, 2022
Laboratory Reference: 2205-263
Project: 14-05806-000

Case Narrative

Samples were collected on May 24, 2022 and received by the laboratory on May 24, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
20220524-COUMO	Water	22-A008379	Micro, NUT
20220524-COUMI	Water	22-A008380	Micro, NUT
20220524-TOSMO	Water	22-A008381	Micro, NUT
20220524-TYLMO	Water	22-A008382	Micro, NUT
20220524-TYLMI	Water	22-A008383	Micro, NUT
20220524-MONMN	Water	22-A008384	Micro, NUT
20220524-MONMS	Water	22-A008385	Micro, NUT
20220524-MONM	Water	22-A008386	Micro, NUT
20220524-TOSMI	Water	22-A008387	Micro, NUT
20220524-SEIMN	Water	22-A008388	Micro, NUT
20220524-COLM	Water	22-A008389	Micro, NUT
20220524-SEIMS	Water	22-A008390	Micro, NUT
20220524-QA120	Water	22-A008391	Micro, NUT

Your samples were received on Tuesday, May 24, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000
Personnel Performing Calibration:	C. Conroy
Meter:	Pro DSS #1
Date/Time:	5/24/22 8:12 am
Barometric Pressure Start of Day:	mmHg: 772.7 Time: 8:16
Barometric Pressure End of Day:	mmHg: 772.2 Time: 12:17

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.7	0	22.5	
Conductivity (µS/cm)	1053	1,000	23.0	
Conductivity (µS/cm)	97.1	100	22.9	
DO % Saturation	102.3	100	22.8	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)		0		forgot to do
Conductivity (µS/cm)		100		post check
DO % Saturation		100		

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

Re: Analytical Data for Project 14-05806-000
Laboratory Reference No. 2207-069

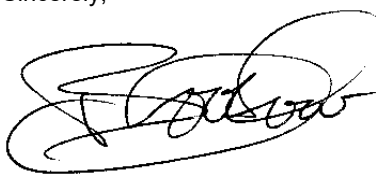
Dear Jess:

Enclosed are the analytical results and associated quality control data for samples submitted on July 11, 2022.

The standard policy of OnSite Environmental, Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,



Blair Goodrow
Project Manager

Enclosures

Date of Report: August 5, 2022
Samples Submitted: July 11, 2022
Laboratory Reference: 2207-069
Project: 14-05806-000

Case Narrative

Samples were collected on July 11, 2022 and received by the laboratory on July 11, 2022. They were maintained at the laboratory at a temperature of 2°C to 6°C.

Please note that any and all soil sample results are reported on a dry-weight basis, unless otherwise noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Total Suspended Solids SM 2540D Analysis

The duplicate RPD is outside control limits due to sample inhomogeneity.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

N1 - Hydrocarbons in diesel range are impacting lube oil range results.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

X1- Sample extract treated with a Sulfuric acid/Silica gel cleanup procedure.

Y - The calibration verification for this analyte exceeded the 20% drift specified in method 8260C, and therefore the reported result should be considered an estimate. The overall performance of the calibration verification standard met the acceptance criteria of the method.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

Attention: David Baumeister

Dear David Baumeister:

Enclosed please find the analytical data for your REDMOND PAIRED WATERSHED STUDY project.

The following is a cross correlation of client and laboratory identifications for your convenience.

CLIENT ID	MATRIX	AMTEST ID	TEST
COLM-2022-0711	Water	22-A011507	Micro, NUT
SEIMS-2022-0711	Water	22-A011508	Micro, NUT
QA-121-2022-0711	Water	22-A011509	Micro, NUT
COUMO-2022-0711	Water	22-A011510	Micro, NUT
COUMI-2022-0711	Water	22-A011511	Micro, NUT

SEIMN-2022-0711	Water	22-A011519	Micro, NUT

Your samples were received on Monday, July 11, 2022. At the time of receipt, the samples were logged in and properly maintained prior to the subsequent analysis.

The analytical procedures used at AmTest are well documented and are typically derived from the protocols of the EPA, USDA, FDA or the Army Corps of Engineers.

Following the analytical data you will find the Quality Control (QC) results.

Please note that the detection limits that are listed in the body of the report refer to the Practical Quantitation Limits (PQL's), as opposed to the Method Detection Limits (MDL's).

If you should have any questions pertaining to the data package, please feel free to contact me.

Sincerely,

Aaron W. Young
Vice President

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000
Personnel Performing Calibration:	D. Garcia
Meter:	Pro DSS #1
Date/Time:	7/8/22 15:28
Barometric Pressure Start of Day:	mmHg: 766.0 Time: 8:00
Barometric Pressure End of Day:	mmHg: 767.2 Time: 15:35

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	1.0	0	22.6	
Conductivity (µS/cm)	1022	1,000	23.9	
Conductivity (µS/cm)	96	100	24.0	
DO % Saturation	103	100	24.0	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.2	0	22.5	
Conductivity (µS/cm)	96.4	100	22.6	
DO % Saturation	100.1	100		

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.
6. Check conductivity using 100 µS/cm standard.

Dissolved Oxygen Calibration Notes:

1. Fill the calibration cup with about 1/2 inch of DI; it should be below the sensor cap.
2. Use KimWipes® to dry any droplets from the sensor cap.
3. Invert calibration cup's cap and gently rest it on the cup.
4. Wait 5 minutes, making sure that temperature stabilizes.
5. Determine local barometric pressure (mm Hg) and enter this value into the meter.
6. Click "Calibrate". "Calibrate Successful" will be displayed.
7. To retain calibration accuracy between measurements, store with the sensor immersed in water or within a water-saturated air environment such as a sealed storage cup with at least 10 ml of water.
8. It is important to have the water-saturated air and the sensor at the same temperature. Therefore, store a jar of DI in the same environment as the sonde and calibrate in a similar air temperature as the water and sonde.
9. Keep probe out of direct sun or wind.

METER CALIBRATION LOG - Redmond Paired Watershed Study

Project Number:	14-05806-000
Personnel Performing Calibration:	D Garcia
Meter:	Pro DSS #2
Date/Time:	7/8/22 15:40
Barometric Pressure Start of Day:	mmHg: 766.2 Time: 8:00
Barometric Pressure End of Day:	mmHg: 767.3 Time: 15:35

PRE Field Run CALIBRATION	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.2	0	23.6	
Conductivity (µS/cm)	821	1,000	24.4	
Conductivity (µS/cm)	95.7	100	24.9	
DO % Saturation	100.6	100	24.9	

POST Field Run CHECK	Meter Reading	Buffer / Cal Std	Temp °C	Comments
Conductivity (µS/cm)	0.1	0	23.6	
Conductivity (µS/cm)	97.6	100	23.6	
DO % Saturation	100.7	100	23.6	

Calibration Procedures:

Rinse Multimeter Sonde Between Each Operation

Rinse 3 times with tap water, 3 times with deionized water, then 3 times with the solution to be used for calibrating or testing.

Conductivity Calibration Notes:

1. Dry the conductivity probe with a lab tissue (e.g., KimWipes®) and DI water.
2. Fill calibration cup to within a centimeter of the top of the calibration cup with DI water (0 µS).
3. Fill the calibration cup with 1,000 µS standard so that the temperature/conductivity probe is submerged.
4. Make sure there are no bubbles in the cell; wait 2 minutes.
5. Enter the appropriate standard value (1,000 µS/cm or 1.0 mS/cm) for Sp Cond.

TECHNICAL MEMORANDUM

Date: April 26, 2023

To: Project File

From: Jess Brown

Subject: Data Quality Assurance Review of the Redmond Paired Watershed Stormwater Retrofit Effectiveness Water Quality Monitoring Data – Water Year 2022

Data Quality Assurance Review

This memorandum presents a review of data quality for 166 water samples (including 12 field duplicates) collected for the Redmond Paired Watershed Stormwater Retrofit Effectiveness Study between October 21, 2021, and July 11, 2022. In addition, 15 samples were collected on September 27, 2022, including one field duplicate, one filter blank, and one transfer blank. While this data was collected for water year 2023, a quality assurance review of the filter blank and transfer blank are discussed herein.

OnSite Environmental, Inc., of Redmond, Washington, analyzed the samples for:

- Total suspended solids (TSS) by Standard Method 2540D
- Turbidity by EPA Method 180.1
- Hardness by Standard Method 2340B
- Dissolved organic carbon (DOC) by Standard Method 5310B
- Total phosphorus by EPA Method 365.1
- Total and dissolved metals (copper and zinc) by EPA Method 200.8.

In addition, AmTest Inc., of Kirkland, Washington, analyzed the samples for:

- Total nitrogen (total Kjeldahl nitrogen [TKN] and nitrate + nitrite nitrogen) by Standard Method 4500-N and 4500-NO3, respectively
- Fecal coliform by Standard Method 9222D.

2200 Sixth Avenue, Suite 1100 | Seattle, WA 98121 206.441.9080 herrerainc.com
WASHINGTON | OREGON | CALIFORNIA | MONTANA | WYOMING

Results for the following samples (Table 1) were validated.

Table 1. Water Year 2022 Samples.

Date Collected	Lab SDG	Samples Collected	QC Samples Collected
10/21/2021	2110-210	14 stations	1 field duplicate
10/28/2021	2110-282	14 stations	1 field duplicate
11/11/2021	2111-138	14 stations	1 field duplicate
12/29/2021	2112-270	14 stations	1 field duplicate
1/6/2022	2201-042	14 stations	1 field duplicate
2/17/2022	2202-221	12 stations	1 field duplicate
2/28/2022	2202-387	12 stations	1 field duplicate
3/14/2022	2203-161	12 stations	1 field duplicate
4/18/2022	2204-205	12 stations	1 field duplicate
5/5/2022	2205-063	12 stations	1 field duplicate
5/24/2022	2205-263	12 stations	1 field duplicate
7/11/2022	2207-069	12 stations	1 field duplicate
9/27/2022[a]	2209-267	12 stations	1 field duplicate, 1 transfer blank, and 1 filter blank

[a] This sample was collected as part of water year 2023, and this memorandum does not describe the quality assurance review of the data except for transfer blank and filter blanks.

The laboratory's performance was reviewed in accordance with quality control (QC) criteria established in the *Redmond Paired Watershed Study Quality Assurance Project Plan* (QAPP) (Herrera 2015), by the laboratory, and in the specified methods.

Quality control data summaries submitted by the laboratory were reviewed; raw data were not submitted by the laboratory. Data Quality Assurance Worksheets were completed for each laboratory report. Data qualifiers (flags) were added to the sample results in the laboratory reports. Data validation results are summarized below, followed by definitions of data qualifiers.

Custody, Preservation, Holding Times, and Completeness – Acceptable with Qualification

The samples were properly preserved and sample custody was maintained from sample collection to receipt at the laboratory. Samples were analyzed within the required method holding times, with the exception noted below. The laboratory reports were complete and contained results for all samples and tests requested on the chain-of-custody (COC) forms.

The filtration holding time (15 minutes) was exceeded for dissolved metals and DOC by less than 1 day for all samples collected on November 11, 2021. Samples were not filtered at the time of collection and were qualified as estimated (flagged J) due to the filtration holding time exceedance (Table 2).

Table 2. Data Qualified due to Holding Time Exceedances.

Date Collected	Lab SDG	Sample Location	Parameter	Reason for Qualification	Flag
11/11/21	2111-138	All locations	Dissolved Organic Carbon Dissolved copper Dissolved zinc	Filtration holding time exceeded	J

Laboratory Reporting Limits – Acceptable

The laboratory reporting limits met those established in the QAPP with one exception. The reporting limits for total suspended solids (64 samples), turbidity (20 samples), total zinc (8 samples), and dissolved zinc (1 sample) were slightly elevated; however, data quality was not affected because the samples were detected above the reporting limit. No data were qualified based on laboratory reporting limits.

Method Blank Analysis – Acceptable

Method blanks were analyzed at the required frequency. Method blanks did not contain levels of target analytes above the laboratory reporting limits.

Filter Blank Analysis – Acceptable

A filter blank was collected on September 27, 2022, and analyzed for DOC and dissolved copper and zinc, as required by the QAPP. The filter blanks did not contain levels of target analytes above the laboratory reporting limits.

Transfer Blank Analysis – Acceptable with Discussion

A transfer blank was collected on September 27, 2022, and analyzed for all parameters, as required by the QAPP. With the exception noted below, the transfer blank did not contain levels of target analytes above the laboratory reporting limits.

The transfer blank had a reported result for TKN (0.348 mg/L) that exceeded the 0.20 reporting limit. However, because the reported result was less than 2 times the reporting limit, no data were qualified.

The transfer blank was undetected for TSS, but the laboratory control sample analysis had a low percent recovery indicating a potential low bias. The transfer blank result was qualified as estimated (J).

Laboratory Control Sample Analysis – Acceptable

Laboratory control samples (LCS) were analyzed with project samples for TSS, hardness, DOC, total phosphorus, and total nitrogen at the required frequency. The percent recovery values for all parameters met the criteria established in the QAPP.

Matrix Spike Analysis – Acceptable with Discussion

Matrix spike samples were analyzed for hardness, DOC, total phosphorus, total nitrogen, total copper and zinc, and dissolved copper and zinc. The percent recovery values for all parameters met the control limits established in the QAPP with one exception noted below.

The matrix spike recovery for nitrate + nitrite nitrogen (62 percent) exceeded the lower limit of the criterion (75 to 125 percent). However, no data were qualified because the matrix spike was applied to a batch sample and all other matrix spike recoveries for TKN and nitrate + nitrite nitrogen were in control.

Laboratory Duplicate Analysis – Acceptable with Qualification

Laboratory duplicate samples were analyzed for all parameters. For project samples, the relative percent difference (RPD) was calculated for each analyte where both duplicate values were greater than five times the reporting limit (RL). The difference between duplicate values was calculated if the detected compound concentration was less than five times the RL in either the sample or the duplicate. The RPD values or difference values met the control limits established by the laboratory or specified method, with the exceptions noted below.

A laboratory duplicate was analyzed for sample COUMO collected on November 11, 2021, for fecal coliform. The RPD between the sample and laboratory duplicate (36 percent) exceeded the less than 35 percent criterion. However, no data were qualified because the exceedance was marginal and the other laboratory duplicate for fecal coliform was in control.

A laboratory duplicate was analyzed for sample collected on January 6, 2022, for nitrate + nitrite nitrogen. The RPD between the sample and laboratory duplicate (83 percent) exceeded the less than 20 percent criterion. However, no data were qualified because the duplicate result applied to a laboratory batch sample and all other laboratory duplicates for TKN and nitrate + nitrite nitrogen were in control.

As shown in Table 3 below, two samples and associated duplicates were qualified as estimated (flagged J) due to the laboratory duplicate exceedance.

Table 3. Data Qualified due to Laboratory Duplicate Exceedance.

Date Collected	Lab SDG	Sample Location	Parameter	Reason for Qualification	Flag
5/5/2022	2205-063	CUOMO	Turbidity	Laboratory duplicate exceedance	J
7/11/2022	2207-069	COUMI	TSS	Laboratory duplicate exceedance	J

Field Duplicate Analysis – Acceptable with Qualification

Field duplicates were analyzed for all parameters at the required frequency (12 field duplicates analyzed for water year 2022 samples in total). The RPD was calculated for each analyte where both the values were greater than five times the RL. The difference between the duplicate values was calculated if the detected compound concentration was less than five times the RL in either the sample or the field

duplicate. With the exceptions noted below, the RPD values or difference values met the control limits established in the QAPP.

As shown in Table 4 below, several field duplicate values did not meet the criteria established in the QAPP. The sample and associated duplicate were qualified as estimated (flagged J) due to the field duplicate exceedance.

Table 4. Data Qualified Due to Field Duplicate Exceedances.

Date Collected	Lab SDG	Sample Location	Parameter	Reason for Qualification	Flag
10/28/2021	2110-282	COUMI	Fecal coliform Turbidity	Field duplicate exceedance	J
11/11/2021	2111-138	EVALSS	Fecal coliform	Field duplicate exceedance	J
12/29/2021	2112-270	TOSMO	TSS Turbidity	Field duplicate exceedance	J
2/17/2022	2202-221	TYLMI	Turbidity	Field duplicate exceedance	J
4/18/2022	2204-205	COUMO	Fecal coliform TSS	Field duplicate exceedance	J
5/5/2022	2205-063	TOSMO	Fecal coliform Turbidity	Field duplicate exceedance	J

Definition of Data Qualifiers

The following are data qualifier definitions (Table 5) applied for this project.

Table 5. Data Qualifier Definitions.

Data Qualifier	Definition
J	Value is an estimate based on analytical results
R	Value is rejected based on analytical results
U	Value is below the reporting limit
UJ	Value is below the reporting limit and is an estimate based on analytical results

µg/L: micrograms per liter

All summary statistics were calculated using values of half the reporting limit for non-detect values.

[a] Percentage of base flow and storm event samples violating chronic and acute criteria for fresh water aquatic life protection, respectively, from Washington Adminstrative Code 173-201A. Criterion were derived using measured hardness at each station (see Table H-6).

Table H-16. Summary Statistics for Total Zinc Concentrations Measured in Storm Event and Base Flow Samples.

Station	n	Mininum (ug/L)	25th Percentile (ug/L)	Median (ug/L)	75th Percentile (ug/L)	Maximum (ug/L)	Interquartile Range (ug/L)	Percent Detected	Percent Violating Criteria[a]
