King County Environmental Laboratory
322 W. Ewing Street
Seattle WA 98119
ATTN: Mr. Fritz Grothkopp

October 10, 2017

SUBJECT: PCBs Raingardens, Data Validation

Dear Mr. Grothkopp,

Enclosed is the final validation report for the fraction listed below. This SDG was received on September 5, 2017. Attachment 1 is a summary of the samples that were reviewed for analysis.

LDC Project #39448:

SDG #

PR171839

Fraction

Polychlorinated Biphenyls as Congeners

The data validation was performed under Level III guidelines. The analyses were validated using the following documents, as applicable to each method:

- Quality Assurance Project Plan: Bioretention Capture Efficacy of PCBs from Stormwater - RSMP Effectiveness Study, December 2016

Please feel free to contact us if you have any questions.

Sincerely,

Stella Cuenco
Operations Manager/Senior Chemist

Laboratory Data Consultants, Inc. Data Validation Report

Project/Site Name: Lower Duwamish Waterway, PCBs Raingardens

LDC Report Date: October 5, 2017

Parameters: Polychlorinated Biphenyls as Congeners

Validation Level: Level III

Laboratory: Pacific Rim Laboratories, Inc.

Sample Delivery Group (SDG): PR171839

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Quality Assurance Project Plan: Bioretention Capture Efficacy of PCBs from Stormwater – RSMP Effectiveness Study (December 2016). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) Method 1668C

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
 - J1 Blank Contamination: Indicates possible high bias and/or false positives.
 - J2 Calibration Range exceeded: Indicates possible low bias.
 - J3 Holding times not met: Indicates low bias for most analytes.
 - J4 Other QC parameters outside control limits: bias not readily determined.
 - J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
 - J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.
- R Quality control indicates the data is not usable.
- NJ Presumptive evidence of presence of the compound at an estimated quantity.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition.

Cooler temperatures were not provided and therefore not reviewed.

All technical holding time requirements were met.

II. HRGC/HRMS Instrument Performance Check

Instrument performance was checked at the required frequency.

Retention time windows were established for all congeners. The chromatographic resolution between the congeners PCB-23 and PCB-34 and congeners PCB-182 and PCB-187 was resolved with a valley of less than or equal to 40%.

The static resolving power was at least 10,000 (10% valley definition).

III. Initial Calibration

A five point initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for unlabeled compounds and less than or equal to 35.0% for labeled compounds.

The ion abundance ratios for all compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration results were within the QC limits for unlabeled compounds and labeled compounds with the following exceptions:

| Date | Compound | %D | Associated Samples | Affected Compound | Flag | A or P |
|----------|--------------------|------------------------------|--|---|--|--------|
| 07/24/17 | PCB-37 | 138 (70-130) | L68013-5 L68013-6 L68013-7 L68013-8 L68013-9 | PCB-37 Trichlorobiphenyls | J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects) | P |
| 07/25/17 | PCB-001 PCB-126 | 131 (70-130) 131 (70-130) | L67394-1 L67394-2 L67394-3 L67394-4 L67394-5 | PCB-001 PCB-126 Monochlorobiphenyls Pentachlorobiphenyls | J (all detects) UJ (all non-detects) | P |

The ion abundance ratios for all compounds were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks with the following exceptions:

| Blank ID | Extraction Date | Compound | Concentration | Associated Samples |
|-------------|-----------------|--|--|--|
| MBPC170631B | 06/22/17 | PCB-011 PCB-028 PCB-052/069 PCB-044 PCB-072/064/071 PCB-118 PCB-105 PCB-139/149 PCB-153 PCB-163/164 PCB-138 PCB-182/187 PCB-177 PCB-180 Dichlorobiphenyls Trichlorobiphenyls Tetrachlorobiphenyls Pentachlorobiphenyls Hexachlorobiphenyls Heptachlorobiphenyls | 37.9 pg/L 8.67 pg/L 6.94 pg/L 5.86 pg/L 2.36 pg/L 14.1 pg/L 4.99 pg/L 14.1 pg/L 40.6 pg/L 2.74 pg/L 28.8 pg/L 9.3 pg/L 2.42 pg/L 13.8 pg/L 37.9 pg/L 8.7 pg/L 15.2 pg/L 19.1 pg/L 86.2 pg/L 25.5 pg/L | L67394-1 L67394-2 L67394-3 L67394-4 L67394-5 L67394-6 L67394-7 L67394-8 L67394-9 |
| MBPC170633B | 06/22/17 | PCB-101 PCB-153 PCB-163/164 PCB-138 PCB-182/187 Pentachlorobiphenyls Hexachlorobiphenyls Heptachlorobiphenyls | 26.6 pg/L 87.6 pg/L 20.3 pg/L 39.1 pg/L 30.7 pg/L 26.6 pg/L 147 pg/L 30.7 pg/L | L68013-1 L68013-2 L68013-3 L68013-4 L68013-5 L68013-6 L68013-7 L68013-8 L68013-9 |

| L67978-4 | PCB-016 | 0.0317 ug/Kg | 0.0317U ug/Kg |

Laboratory blank results flagged "NJ" by the laboratory as estimated maximum possible concentration (EMPC) and reported below the quantitation limit (QL) are considered not detected.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits with the following exceptions:

| DUP ID (Associated Samples) | Compound | RPD (Limits) | Difference (Limits) | Affected Compound | Flag | A or P |
|--|---|--|------------------------|--|---|--------|
| L67978-6DUP (L67978-6 L67978-6DUP) | PCB-016 PCB-045 PCB-139/149 PCB-177 PCB-194 | 200 (≤50) 200 (≤50) 200 (≤50) 200 (≤50) 55 (≤50) | - - - - - | PCB-016 PCB-045 PCB-139/149 PCB-177 PCB-194 Trichlorobiphenyls Tetrachlorobiphenyls Hexachlorobiphenyls Hexachlorobiphenyls Octachlorobiphenyls | J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) J (all detects) | A |

VIII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

| LCS ID | Compound | %R (Limits) | Associated Samples | Affected Compound | Flag | A or P |
|--------------|---|---|--|---|--|--------|
| LCSPC170632S | PCB-151 PCB-139/149 PCB-180 | 57.6 (60-135) 25.4 (60-135) 136.2 (60-135) | L67394-1 L67394-2 L67394-3 L67394-4 L67394-5 L67394-6 L67394-7 L67394-8 L67394-9 | PCB-151 PCB-139/149 PCB-180 Hexachlorobiphenyls Heptachlorobiphenyls | J (all detects) UJ (all non-detects) | P |
| LCSPC170634S | PCB-139/149 | 27.9 (60-135) | L68013-1 L68013-2 L68013-3 L68013-4 L68013-5 L68013-6 L68013-7 L68013-8 L68013-9 | PCB-139/149 Hexachlorobiphenyls | J (all detects) UJ (all non-detects) J (all detects) UJ (all non-detects) | P |
| LCSPC170646S | PCB-041 PCB-090 PCB-151 PCB-139/149 PCB-153 | 46.9 (60-135) 58.8 (60-135) 54.3 (60-135) 25.9 (60-135) 57.7 (60-135) | All soil samples in SDG PR171839 | PCB-041 PCB-090 PCB-151 PCB-139/149 PCB-153 PCB-070 Tetrachlorobiphenyls Pentachlorobiphenyls Hexachlorobiphenyls | J (all detects) UJ (all non-detects) | P |

| LCS ID | Compound | %R (Limits) | Associated Samples | Affected Compound | Flag | A or P |
|--------------|----------|----------------|----------------------------------|---|------------------------------------|--------|
| LCSPC170646S | PCB-070 | 146.1 (60-135) | All soil samples in SDG PR171839 | PCB-041 PCB-090 PCB-151 PCB-139/149 PCB-153 PCB-070 Tetrachlorobiphenyls Pentachlorobiphenyls Hexachlorobiphenyls | J (all detects) | P |
| LCSPC170646S | PCB-191 | 137.6 (60-135) | L67149-4 L67149-5 L67978-1 | PCB-191 Heptachlorobiphenyls | J (all detects) J (all detects) | P |

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Internal Standards

All internal standard recoveries (%R) were within QC limits with the following exceptions:

| Sample | Internal Standards | %R | Affected Compound | Flag | A or P |
|----------|--------------------|-----|--|---|--------|
| L67978-4 | 13C-PCB-189 | 152 | PCB-184 PCB-179 PCB-176 PCB-186 PCB-178 PCB-175 PCB-182/187 PCB-183 PCB-185 PCB-174 PCB-181 PCB-177 PCB-171 PCB-173 PCB-172 PCB-192 PCB-180 PCB-193 PCB-191 PCB-170 PCB-190 PCB-189 Heptachlorobiphenyls | J (all detects) UJ (all non-detects) | P |

XI. Compound Quantitation

All compound quantitations were within validation criteria with the following exceptions:

| Sample | Compound | Flag | A or P |
|--|--|------|--------|
| L67394-1 L67394-2 L67394-3 L67394-4 L67394-5 L67394-6 L67394-7 L67394-8 L67394-9 L68013-1 L68013-2 L68013-3 L68013-4 L68013-5 L68013-7 L68013-8 L68013-9 L67149-1 L67149-2 L67149-3 L67149-4 L67149-5 L67149-6 L67978-1 L67978-2 L67978-3 L67978-4 L67978-5 L67978-6 L67978-7 | All compounds flagged "N" or "NJ" by the laboratory as EMPC. | U | A |

Raw data were not reviewed for Level III validation.

XII. Target Compound Identification

Raw data were not reviewed for Level III validation.

XIII. System Performance

Raw data were not reviewed for Level III validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to continuing calibration %D, DUP RPD, LCS %R, internal standards %R, and results reported by the laboratory as EMPCs, data were qualified as estimated in thirty-two samples.

Due to laboratory blank contamination, data were qualified as estimated and not detected in twenty-four samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

 Reviewer: [Signature]
 2nd Reviewer: [Signature]

METHOD: HRGC/HRMS Polychlorinated Biphenyl Congeners (EPA Method 1668C)

The samples listed below were reviewed for each of the following validation areas. Validation findings are noted in attached validation findings worksheets.

| | Validation Area | | Comments |
|-------|---|------|----------------------------|
| I. | Sample receipt/Technical holding times | SW/A | cooler temp not provided * |
| II. | HRGC/HRMS Instrument performance check | A | |
| III. | Initial calibration/IST | A | RSD = 20/35 |
| IV. | Continuing calibration | SW | GC limits |
| V. | Laboratory Blanks | SW | |
| VI. | Field blanks | N | |
| VII. | Matrix spike/Matrix spike duplicates /DUP | N/SW | |
| VIII. | Laboratory control samples | SW | LCS |
| IX. | Field duplicates | N | |
| X. | Internal standards | SW | |
| XI. | Compound quantitation RL/LOQ/LÖDs | SW | |
| XII. | Target compound identification | N | |
| XIII. | System performance | N | |
| XIV. | Overall assessment of data | A | |

Note: A = Acceptable
 N = Not provided/applicable
 SW = See worksheet
 ND = No compounds detected
 R = Rinsate
 FB = Field blank
 D = Duplicate
 TB = Trip blank
 EB = Equipment blank
 SB=Source blank

Laboratory blank results flagged "NJ" by the laboratory as estimated maximum possible concentration (EMPC) are considered not detected.

All contaminants within five times the blank concentration were qualified as not detected, "U".

VALIDATION FINDINGS WORKSHEET
Laboratory Control Samples (LCS)

METHOD: HRGC/HRMS PCB Congeners (EPA Method 1668C)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

- Y N N/A Was a LCS required?
- Y N N/A Was a LCS analyzed every 20 samples for each matrix or whenever a sample extraction was performed?
- Y N N/A Were the LCS percent recoveries (%R) and relative percent difference (RPD) within the QC limits?

VALIDATION FINDINGS WORKSHEET
Compound Quantitation and Reported CRQLs

METHOD: HRGC/HRMS PCB Congeners (EPA Method 1668C)

Please see qualifications below for all questions answered "N". Not applicable questions are identified as "N/A".

Y N N/A Were the correct internal standard (IS), quantitation ions and relative response factors (RRF) used to quantitate the compound?
Y N N/A Compound quantitation and CRQLs were adjusted to reflect all sample dilutions and dry weight factors (if necessary).

ATTN: Mr. Fritz Grothkopp

November 15, 2018

SUBJECT: PCBs Raingardens, Data Validation

Dear Mr. Grothkopp,

Enclosed are the final validation reports for the fraction listed below. These SDGs were received on October 24, 2018. Attachment 1 is a summary of the samples that were reviewed for each analysis.

LDC Project #43459:

| <u>SDG #</u> | <u>Fraction</u> |
|---------------------|--|
| PR180148, PR182561 | Polychlorinated Biphenyls as Congeners |

The data validation was performed under Level III guidelines. The analyses were validated using the following documents, as applicable to each method:

- Quality Assurance Project Plan: Bioretention Capture Efficacy of PCBs from Stormwater - RSMP Effectiveness Study, December 2016

Please feel free to contact us if you have any questions.

Sincerely,

Stella Cuenco
Operations Manager/Senior Chemist

Laboratory Data Consultants, Inc. Data Validation Report

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Quality Assurance Project Plan: Bioretention Capture Efficacy of PCBs from Stormwater – RSMP Effectiveness Study (December 2016). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) Method 1668C

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
 - J1 Blank Contamination: Indicates possible high bias and/or false positives.
 - J2 Calibration Range exceeded: Indicates possible low bias.
 - J3 Holding times not met: Indicates low bias for most analytes.
 - J4 Other QC parameters outside control limits: bias not readily determined.
 - J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
 - J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.
- R Quality control indicates the data is not usable.
- NJ Presumptive evidence of presence of the compound at an estimated quantity.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition; however, the cooler temperature upon receipt was reported at 8.9°C. Using professional judgment, no data were qualified due to the cooler temperature non-conformance since PCBs are environmentally stable and are not expected to degrade significantly during transit or storage.

All technical holding time requirements were met.

II. HRGC/HRMS Instrument Performance Check

Instrument performance was checked at the required frequency.

The static resolving power was at least 10,000 (10% valley definition).

III. Initial Calibration

A five point initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for unlabeled compounds and less than or equal to 35.0% for labeled compounds.

The ion abundance ratios for all compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration results were within the QC limits for unlabeled compounds and labeled compounds with the following exceptions:

| Date | Compound | %R | Associated Samples | Affected Compound | Flag | A or P |
|----------|-------------------------------------|--|--|--|---|--------|
| 02/08/18 | PCB-004 PCB-118 13C12-PCB-019 | 192 (75-125) 196 (75-125) 209 (50-145) | L68722-4 L68722-6 L68722-7 L69159-3 | PCB-004 PCB-019 PCB-030 PCB-018 PCB-017 PCB-024 PCB-027 PCB-032 PCB-016 PCB-023 PCB-034 PCB-029 PCB-026 PCB-025 PCB-031 PCB-028 PCB-021 PCB-020/033 PCB-022 PCB-036 PCB-039 PCB-038 PCB-035 PCB-037 PCB-118 Dichlorobiphenyls Trichlorobiphenyls Pentachlorobiphenyls | J (all detects) UJ (all non-detects) | P |

The ion abundance ratios for all compounds were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks with the following exceptions:

| Blank ID | Extraction Date | Compound | Concentration | Associated Samples |
|-------------|-----------------|--|---|--|
| MBPC180066B | 01/26/18 | PCB-031 PCB-020/033 PCB-052/069 PCB-071 Trichlorobiphenyls Tetrachlorobiphenyls | 0.0026 ug/Kg 0.002 ug/Kg 0.0029 ug/Kg 0.0024 ug/Kg 0.0046 ug/Kg 0.0053 ug/Kg | All soil samples in SDG PR180148 |
| MBPC180068B | 01/26/18 | PCB-047/048 PCB-163/164 PCB-138 Tetrachlorobiphenyls Hexachlorobiphenyls | 2.75 pg/L 2.24 pg/L 5.39 pg/L 2.75 pg/L 10.9 pg/L | L68886-1 L68886-2 L68886-3 L68886-4 L68886-5 L68886-6 L68886-7 L68886-8 L68886-9 |

| Blank ID | Extraction Date | Compound | Concentration | Associated Samples |
|-------------|-----------------|-----------------------------------|------------------------|--|
| MBPC180125B | 02/07/18 | PCB-020/033 Trichlorobiphenyls | 6.44 pg/L 6.44 pg/L | L69347-1 L69347-2 L69347-3 L69347-4 L69347-5 L69347-6 L69347-7 L69347-8 L69347-9 |

Sample concentrations were compared to concentrations detected in the laboratory blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated laboratory blanks with the following exceptions:

| Sample | Compound | Reported Concentration | Modified Final Concentration |
|----------|--|--|--|
| L68722-5 | PCB-031 PCB-020/033 PCB-052/069 PCB-071 | 0.0062 ug/Kg 0.0033 ug/Kg 0.0129 ug/Kg 0.0023 ug/Kg | 0.0062U ug/Kg 0.0033U ug/Kg 0.0129U ug/Kg 0.0023U ug/Kg |
| L68886-3 | PCB-163/164 PCB-138 | 5.86 pg/L 23.3 pg/L | 5.86U pg/L 23.3U pg/L |
| L68886-4 | PCB-047/048 PCB-163/164 PCB-138 | 3.05 pg/L 6.86 pg/L 24.8 pg/L | 3.05U pg/L 6.86U pg/L 24.8U pg/L |
| L68886-6 | PCB-163/164 PCB-138 | 6.1 pg/L 18.3 pg/L | 6.1U pg/L 18.3U pg/L |
| L68886-7 | PCB-047/048 PCB-138 | 3.76 pg/L 23.2 pg/L | 3.76U pg/L 23.2U pg/L |
| L68886-8 | PCB-163/164 PCB-138 Hexachlorobiphenyls | 2.75 pg/L 11.7 pg/L 46.5 pg/L | 2.75U pg/L 11.7U pg/L 46.5J pg/L |
| L68886-9 | PCB-047/048 PCB-163/164 PCB-138 | 1.57 pg/L 2.96 pg/L 19.8 pg/L | 1.57U pg/L 2.96U pg/L 19.8U pg/L |

Laboratory blank results flagged "N" or "NJ" by the laboratory as estimated maximum possible concentration (EMPC) and reported below the quantitation limit (QL) are considered not detected.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Ongoing Precision Recovery

Ongoing precision recovery (OPR) samples were analyzed as required by the method. Percent recoveries (%R) were within QC limits with the following exceptions:

| LCS ID | Compound | %R (Limits) | Associated Samples | Affected Compound | Flag | A or P |
|--------------|---|---|--|--|---|--------|
| LCSPC180069S | PCB-018 PCB-102/093/098/095 PCB-087/115 PCB-151 PCB-139/149 | 52.7 (60-135) 42.8 (60-135) 51.8 (60-135) 26.8 (60-135) 41.5 (60-135) | L68886-1 L68886-2 L68886-3 L68886-4 L68886-5 L68886-6 L68886-7 L68886-8 L68886-9 | PCB-018 PCB-102/093/098/095 PCB-087/115 PCB-151 PCB-139/149 Trichlorobiphenyls Pentachlorobiphenyls Hexachlorobiphenyls | J (all detects) UJ (all non-detects) | P |

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Labeled Compounds

All percent recoveries (%R) for labeled compounds used to quantitate target compounds were within QC limits.

XI. Compound Quantitation

All compound quantitations were within validation criteria with the following exceptions:

| Sample | Compound | Flag | A or P |
|--|--|------|--------|
| L68722-1 L68722-2 L68722-3 L68722-4 L68722-5 L68722-6 L68722-7 L69159-1 L69159-2 L69159-3 L69159-4 L69159-5 L69159-6 L69159-7 L68886-1 L68886-2 L68886-3 L68886-4 L68886-5 L68886-6 L68886-7 L68886-8 L68886-9 L69347-1 L69347-3 L69347-4 L69347-5 L69347-6 L69347-7 L69347-8 L69347-9 | All compounds flagged "N" or "NJ" by the laboratory as EMPC. | U | A |

Raw data were not reviewed for Level III validation.

XII. Target Compound Identification

Raw data were not reviewed for Level III validation.

XIII. System Performance

Raw data were not reviewed for Level III validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to continuing calibration and OPR %R, data were qualified as estimated in twenty-two samples.

Due to results reported by the laboratory as EMPCs, data were qualified as not detected in thirty-one samples.

Due to laboratory blank contamination, data were qualified as estimated or not detected in seven samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Quality Assurance Project Plan: Bioretention Capture Efficacy of PCBs from Stormwater – RSMP Effectiveness Study (December 2016). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) Method 1668C

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
 - J1 Blank Contamination: Indicates possible high bias and/or false positives.
 - J2 Calibration Range exceeded: Indicates possible low bias.
 - J3 Holding times not met: Indicates low bias for most analytes.
 - J4 Other QC parameters outside control limits: bias not readily determined.
 - J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
 - J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.
- R Quality control indicates the data is not usable.
- NJ Presumptive evidence of presence of the compound at an estimated quantity.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition; however, the cooler temperatures upon receipt were reported at 7.6°C and 12.5°C. Using professional judgment, no data were qualified due to the cooler temperature non-conformance since PCBs are environmentally stable and are not expected to degrade significantly during transit or storage.

All technical holding time requirements were met.

II. HRGC/HRMS Instrument Performance Check

Instrument performance was checked at the required frequency.

Retention time windows were established for all congeners. The chromatographic resolution between the congeners PCB-23 and PCB-34 and congeners PCB-182 and PCB-187 was resolved with a valley of less than or equal to 40%.

The static resolving power was at least 10,000 (10% valley definition).

III. Initial Calibration

An initial calibration was performed as required by the method with the following exceptions:

| Sample | Compound | Finding | Criteria |
|-----------------------------|--------------------|---|--|
| All samples in SDG PR182561 | PCB-001 PCB-003 | A four point calibration was performed. | A five point calibration is specified by the method. |

Using professional judgment, no data were qualified due to the non-conformance listed above since the laboratory did not report results above the highest initial calibration standard.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for unlabeled compounds and less than or equal to 35.0% for labeled compounds.

The ion abundance ratios for all compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration results were within the QC limits for unlabeled compounds and labeled compounds.

The ion abundance ratios for all compounds were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks with the following exceptions:

| Blank ID | Extraction Date | Compound | Concentration | Associated Samples |
|-------------|-----------------|---|--|----------------------------------|
| MBPC180774B | 09/25/18 | PCB-011 PCB-031 PCB-052/069 PCB-043/049 PCB-047/048 PCB-044 PCB-074 PCB-070 PCB-066/080 PCB-077 PCB-101 PCB-120/110 PCB-153 PCB-138 PCB-180 Dichlorobiphenyls Trichlorobiphenyls Tetrachlorobiphenyls Pentachlorobiphenyls Hexachlorobiphenyls Heptachlorobiphenyls | 0.0083 ug/Kg 0.0011 ug/Kg 0.0014 ug/Kg 0.0006 ug/Kg 0.0006 ug/Kg 0.0013 ug/Kg 0.0005 ug/Kg 0.0005 ug/Kg 0.0009 ug/Kg 0.0006 ug/Kg 0.0018 ug/Kg 0.0024 ug/Kg 0.0008 ug/Kg 0.0008 ug/Kg 0.0007 ug/Kg 0.0083 ug/Kg 0.0011 ug/Kg 0.0064 ug/Kg 0.0042 ug/Kg 0.0016 ug/Kg 0.0007 ug/Kg | All soil samples in SDG PR182561 |

Sample concentrations were compared to concentrations detected in the laboratory blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated laboratory blanks with the following exceptions:

| Sample | Compound | Reported Concentration | Modified Final Concentration |
|----------|------------------------------|------------------------------|--------------------------------|
| L69551-1 | PCB-011 | 0.0368 ug/Kg | 0.0368U ug/Kg |
| L69551-2 | PCB-011 | 0.0343 ug/Kg | 0.0343U ug/Kg |
| L69551-3 | PCB-011 Dichlorobiphenyls | 0.0317 ug/Kg 0.0411 ug/Kg | 0.0317U ug/Kg 0.0411J ug/Kg |
| L69551-4 | PCB-011 | 0.0379 ug/Kg | 0.0379U ug/Kg |
| L69551-5 | PCB-011 Dichlorobiphenyls | 0.031 ug/Kg 0.0404 ug/Kg | 0.031U ug/Kg 0.0404J ug/Kg |
| L69551-6 | PCB-011 | 0.0333 ug/Kg | 0.0333U ug/Kg |
| L69551-7 | PCB-011 | 0.0414 ug/Kg | 0.0414U ug/Kg |
| L70294-3 | PCB-011 | 0.0389 ug/Kg | 0.0389U ug/Kg |

Laboratory blank results flagged "N" or "NJ" by the laboratory as estimated maximum possible concentration (EMPC) and reported below the quantitation limit (QL) are considered not detected.

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

VIII. Ongoing Precision Recovery

Ongoing precision recovery (OPR) samples were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Labeled Compounds

All percent recoveries (%R) for labeled compounds used to quantitate target compounds were within QC limits.

XI. Compound Quantitation

All compound quantitations were within validation criteria with the following exceptions:

| Sample | Compound | Flag | A or P |
|--|--|------|--------|
| L69732-1 L69732-2 L69732-9 L69551-1 L69551-2 L69551-3 L69551-4 L69551-5 L69551-6 L69551-7 L70294-1 L70294-2 L70294-3 L70294-4 L70294-5 L70294-6 L70294-7 | All compounds flagged "N" or "NJ" by the laboratory as EMPC. | U | A |

Raw data were not reviewed for Level III validation.

XII. Target Compound Identification

Raw data were not reviewed for Level III validation.

XIII. System Performance

Raw data were not reviewed for Level III validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported by the laboratory as EMPCs, data were qualified as not detected in seventeen samples.

Due to laboratory blank contamination, data were qualified as estimated or not detected in eight samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

SUBJECT: PCBs Raingardens, Data Validation

Dear Ms. McCabe

Enclosed is the revised validation report for the fraction listed below. This SDG was received on May 13, 2019. Attachment 1 is a summary of the samples that were reviewed for analysis.

LDC Project #45030_RV1:

| <u>SDG #</u> | <u>Fraction</u> |
|--------------|--|
| PR190918 | Polychlorinated Biphenyls as Congeners |

The data validation was performed under Level III guidelines. The analyses were validated using the following documents, as applicable to each method:

- Quality Assurance Project Plan: Bioretention Capture Efficacy of PCBs from Stormwater - RSMP Effectiveness Study; December 2016
- USEPA Region 10 SOP for the Validation of Polychlorinated Biphenyl Data; Revision 1.0, December 8, 1995

Please feel free to contact us if you have any questions.

Sincerely,

Stella Cuenco
scuenco@lab-data.com
Operations Manager/Senior Chemist

Introduction

This Data Validation Report (DVR) presents data validation findings and results for the associated samples listed on the cover page. Data validation was performed in accordance with the Quality Assurance Project Plan: Bioretention Capture Efficacy of PCBs from Stormwater – RSMP Effectiveness Study (December 2016) and US Environmental Protection Agency (EPA) Region 10 SOP for the Validation of Polychlorinated Biphenyl (PCB) Data (Revision 1.0, December 8, 1995). Where specific guidance was not available, the data has been evaluated in a conservative manner consistent with industry standards using professional experience.

The analyses were performed by the following method:

Polychlorinated Biphenyls (PCBs) as Congeners by Environmental Protection Agency (EPA) Method 1668C

All sample results were subjected to Level III data validation, which comprises an evaluation of quality control (QC) summary results.

The following are definitions of the data qualifiers:

- U Indicates the compound or analyte was analyzed for but not detected at or above the stated limit.
- J Indicates an estimated value.
 - J1 Blank Contamination: Indicates possible high bias and/or false positives.
 - J2 Calibration Range exceeded: Indicates possible low bias.
 - J3 Holding times not met: Indicates low bias for most analytes.
 - J4 Other QC parameters outside control limits: bias not readily determined.
 - J5 Other QC parameters outside control limits. The reported results appear to be biased high. The actual value of target compound in the sample may be lower than the value reported by the laboratory.
 - J6 Other QC parameters outside control limits. The reported results appear to be biased low. The actual value of target compound in the sample may be higher than the value reported by the laboratory.
- R Quality control indicates the data is not usable.
- NJ Presumptive evidence of presence of the compound at an estimated quantity.
- UJ Indicates the compound or analyte was analyzed for but not detected. The sample detection limit is an estimated value.
- A Indicates the finding is based upon technical validation criteria.
- P Indicates the finding is related to a protocol/contractual deviation.
- None Indicates the data was not significantly impacted by the finding, therefore qualification was not required.

A qualification summary table is provided at the end of this report if data has been qualified. Flags are classified as P (protocol) or A (advisory) to indicate whether the flag is due to a laboratory deviation from a specified protocol or is of technical advisory nature.

I. Sample Receipt and Technical Holding Times

All samples were received in good condition; however, the cooler temperatures upon receipt were reported at 13.1°C, 10.3°C, and 9.1°C. Using professional judgment, no data were qualified due to the cooler temperature non-conformance since PCBs are environmentally stable and are not expected to degrade significantly during transit or storage.

All technical holding time requirements were met.

II. HRGC/HRMS Instrument Performance Check

Instrument performance was checked at the required frequency.

Retention time windows were established for all congeners. The chromatographic resolution between the congeners PCB-23 and PCB-34 and congeners PCB-182 and PCB-187 was resolved with a valley of less than or equal to 40%.

The static resolving power was at least 10,000 (10% valley definition).

III. Initial Calibration

An initial calibration was performed as required by the method.

The percent relative standard deviations (%RSD) were less than or equal to 20.0% for unlabeled compounds and less than or equal to 35.0% for labeled compounds.

The ion abundance ratios for all compounds were within validation criteria.

IV. Continuing Calibration

Continuing calibration was performed at the required frequencies.

All of the continuing calibration results were within the QC limits for unlabeled compounds and labeled compounds.

The ion abundance ratios for all compounds were within validation criteria.

V. Laboratory Blanks

Laboratory blanks were analyzed as required by the method. No contaminants were found in the laboratory blanks with the following exceptions:

| Blank ID | Extraction Date | Compound | Concentration | Associated Samples |
|-----------|-----------------|--|--|--------------------------------------|
| PC190285B | 04/18/19 | PCB-011 PCB-153 Dichlorobiphenyls Hexachlorobiphenyls | 17.8 pg/L 15.4 pg/L 17.8 pg/L 15.4 pg/L | All water samples in SDG PR190918 |
| PC190283B | 04/23/19 | PCB-011 PCB-031 PCB-028 PCB-153 Dichlorobiphenyls Trichlorobiphenyls Hexachlorobiphenyls | 54.6 ng/Kg 5.8 ng/Kg 8.0 ng/Kg 8.78 ng/Kg 54.6 ng/Kg 13.8 ng/Kg 8.78 ng/Kg | All soil samples in SDG PR190918 |

Sample concentrations were compared to concentrations detected in the laboratory blanks. The sample concentrations were either not detected or were significantly greater (>5X blank contaminants) than the concentrations found in the associated laboratory blanks with the following exceptions:

| Sample | Compound | Reported Concentration | Modified Final Concentration |
|----------|--|--|--|
| L71709-5 | PCB-011 PCB-153 Dichlorobiphenyls | 28.9 pg/L 49.5 pg/L 28.9 pg/L | 28.9U pg/L 49.5U pg/L 28.9U pg/L |

| L72037-6 | PCB-011 PCB-031 PCB-028 Dichlorobiphenyls Trichlorobiphenyls | 41.7 ng/Kg 11.6 ng/Kg 12.6 ng/Kg 47.8 ng/Kg 60.9 ng/Kg | 41.7U ng/Kg 11.6U ng/Kg 12.6 U ng/Kg 47.8J ng/Kg 60.9J ng/Kg |
| L72037-6DUP | PCB-011 PCB-031 PCB-028 Dichlorobiphenyls | 43.6 ng/Kg 15.4 ng/Kg 13.9 ng/Kg 55.1 ng/Kg | 43.6U ng/Kg 15.4U ng/Kg 13.9U ng/Kg 55.1J ng/Kg |
| L72037-7 | PCB-011 PCB-031 PCB-028 Dichlorobiphenyls | 35.7 ng/Kg 14.3 ng/Kg 14.9 ng/Kg 44.5 ng/Kg | 35.7U ng/Kg 14.3U ng/Kg 14.9U ng/Kg 44.5J ng/Kg |

VI. Field Blanks

No field blanks were identified in this SDG.

VII. Matrix Spike/Matrix Spike Duplicates/Duplicate Sample Analysis

The laboratory has indicated that there were no matrix spike (MS) and matrix spike duplicate (MSD) analyses specified for the samples in this SDG, and therefore matrix spike and matrix spike duplicate analyses were not performed for this SDG.

Duplicate (DUP) sample analysis was performed on an associated project sample. Results were within QC limits.

VIII. Laboratory Control Samples

Laboratory control samples (LCS) were analyzed as required by the method. Percent recoveries (%R) were within QC limits.

IX. Field Duplicates

No field duplicates were identified in this SDG.

X. Labeled Compounds

All percent recoveries (%R) for labeled compounds used to quantitate target compounds were within QC limits.

XI. Compound Quantitation

All compound quantitations were within validation criteria with the following exceptions:

| Sample | Compound | Flag | A or P |
|--|---|------|--------|
| L71271-1 L71271-2 L71271-3 L71271-8 L71709-1 L71709-2 L71709-6 L71709-8 L71709-9 L71960-1 L71960-8 L72037-1 L72037-2 L72037-3 L72037-6 L72037-7 | All compounds flagged "N" or "NJ" by the laboratory as estimated maximum possible concentration (EMPC). | U | A |

Raw data were not reviewed for Level III validation.

XII. Target Compound Identification

Raw data were not reviewed for Level III validation.

XIII. System Performance

Raw data were not reviewed for Level III validation.

XIV. Overall Assessment of Data

The analysis was conducted within all specifications of the method. No results were rejected in this SDG.

Due to results reported by the laboratory as EMPCs, data were qualified as not detected in sixteen samples.

Due to laboratory blank contamination, data were qualified as estimated or not detected in nineteen samples.

The quality control criteria reviewed, other than those discussed above, were met and are considered acceptable. Sample results that were found to be estimated (J) are usable for limited purposes only. Based upon the data validation all other results are considered valid and usable for all purposes.

Appendix E: Statistical Analysis Approach

We used two primary statistical techniques for this project. The first was a repeated measures ANOVA. We used an ANOVA because PCB concentrations in BSM from each mesocosm were measured repeatedly over time. In effect, this type of statistical test is more powerful than a standard ANOVA, because it acknowledges that each mesocosm had a different starting concentration. The repeated measures ANOVA removes the variation between mesocosms and only examines the variation of each individual mesocosm over time. We used this test because there were graphical suggestions that PCB concentrations in the mesocosms may have declined over the study period – a possible outcome that wasn't anticipated in the QAPP.

The results of repeated measures ANOVA were not considered statistically significant ($p=0.054$) although time explained the concentration better than treatment type (bare vs planted, $p=0.163$). Despite being conducted in triplicate, the statistical power of this study was relatively low to detect significant changes in PCB congener concentrations over time or between bare and planted BSM. Probably the most important factor which influenced the overall statistical power of the study was the initial starting PCB concentration in BSM relative to the mass of PCBs in stormwater from the month(s) or storms within a quarter. There simply wasn't a substantive enough PCB load in ~3 months of stormwater to measure potential changes in BSM concentrations.

EPA Method 1668 is the most robust and analytically powerful method available for measuring PCB congeners. However, because quarterly PCB loadings were less than 0.5% of the initial PCB mass in the BSM, it was not feasible for us to document changes on relatively short timescales (weeks-quarters). Even over our entire 25 month study duration, a potential 3 to 5% increase in PCB concentrations in BSM due to stormwater loadings is not analytically measurable. While we attempted to discern differences between bare and planted BSM treatments, as well as treatment efficacy and changes to BSM over time, the combination of small sample numbers with small potential changes in PCB load/concentration made detecting changes or differences very difficult.

The second statistical technique we used is ordination. Ordination is a statistically based visualization technique used to evaluate similarities and dissimilarities between samples with multiple variables. For this analysis, samples with similar PCB congener patterns plot close to each other and samples with dissimilar PCB congener patterns plot further from each other. To examine if volatile PCB congeners were lost seasonally or the congener pattern in BSM shifted over time via loss of volatile PCBs, we compared congener profiles for BSM samples to one another using an ordination analysis.

First, we square-root transformed the concentration data for all detected congeners to reduce the influence of high concentrations. This transformation was chosen by trial and error, as well as our previous experience conducting this type of analysis for other projects. Bray-Curtis similarity distances were then calculated for each sample relative to the

others¹. We then used these unit-less distances to construct multidimensional scaling (MDS) ordination plots. The MDS plot provides a visual representation of the proximities between and among samples. Our analysis used two dimensional MDSs, which first plots along the MDS1[x] axis, then refines the ordination by adding the y-axis. This means that the sample spread across the MDS1[x] axis is most important for describing similarities and dissimilarities between samples. The most important congeners influencing MDS[x] and MDS[y] are show on Figures 1-E and 2-E below, those congeners with a “c” suffix represent multiple co-eluting congeners. The quality of fit beyond the X-Y dimensions (i.e. the Z dimension and any additional dimensions) is described by the stress term. Stress less than 0.05 indicates a good fit. Stress greater than 0.2 indicates the X-Y axes alone are a poor fit and that additional un-plotted axes represent a considerable portion of the relationship between samples.

We used ordination to visualize potential differences between samples across all the analyzed congeners so that statistical testing between samples could be targeted on plausible hypotheses and differences. This was done so we could avoid conducting a large number of multiple comparisons which can lead to erroneous conclusions about what variables are significant, in part because conducting many comparisons also creates a scenario where some variables may be statistically significant due to chance alone. While there are techniques to avoid false positives due to chance (e.g. Bonferroni corrections or Holm procedures²) or to set an allowable false discovery rate (e.g. Benjamini–Hochberg procedures³). For the purposes of this project we tried to visualize where there might be potentially interesting or environmentally relevant changes or shifts in PCB congener patterns first. Our goal was to determine if there were any apparent changes which might be relevant for best management practice (BMP) service life or management before using a limited amount of statistical testing to see if the changes were significant or due to factors other than chance.

Our ordination analysis revealed two soil samples which appear to be outliers, but further investigation into the possible causes revealed that only two congeners with results close to or below the SDL were driving their appearance as outliers. We considered that having two unusually low congener results across all soil samples was not relevant for BMP management decisions. Some of the other ordination plots we developed are provided below along with our conclusions. Figure 1-E was our first effort to determine if plants had any effect on PCB concentrations in BSM. Bare and planted PCB BSM sampling results are plotted by event, the month of each event is shown adjacent to each result. Plot 1-F demonstrates there was no coherent pattern of BSM results by treatment or seasonally. Similarly, we concluded there were no significant shifts in effluent PCB congener patterns

¹ Bray-Curtis distances can range from 0 (no congeners in common), to 100

which might influence BSM or BMP management. For instance, if we had seen certain PCB congeners or homologs retained while others were released, that knowledge might be important for future BSM or BMP management like cleanings or BSM replacement. We saw no shifts in distribution of PCBs in BSM or effluent which might be relevant for BMP management.

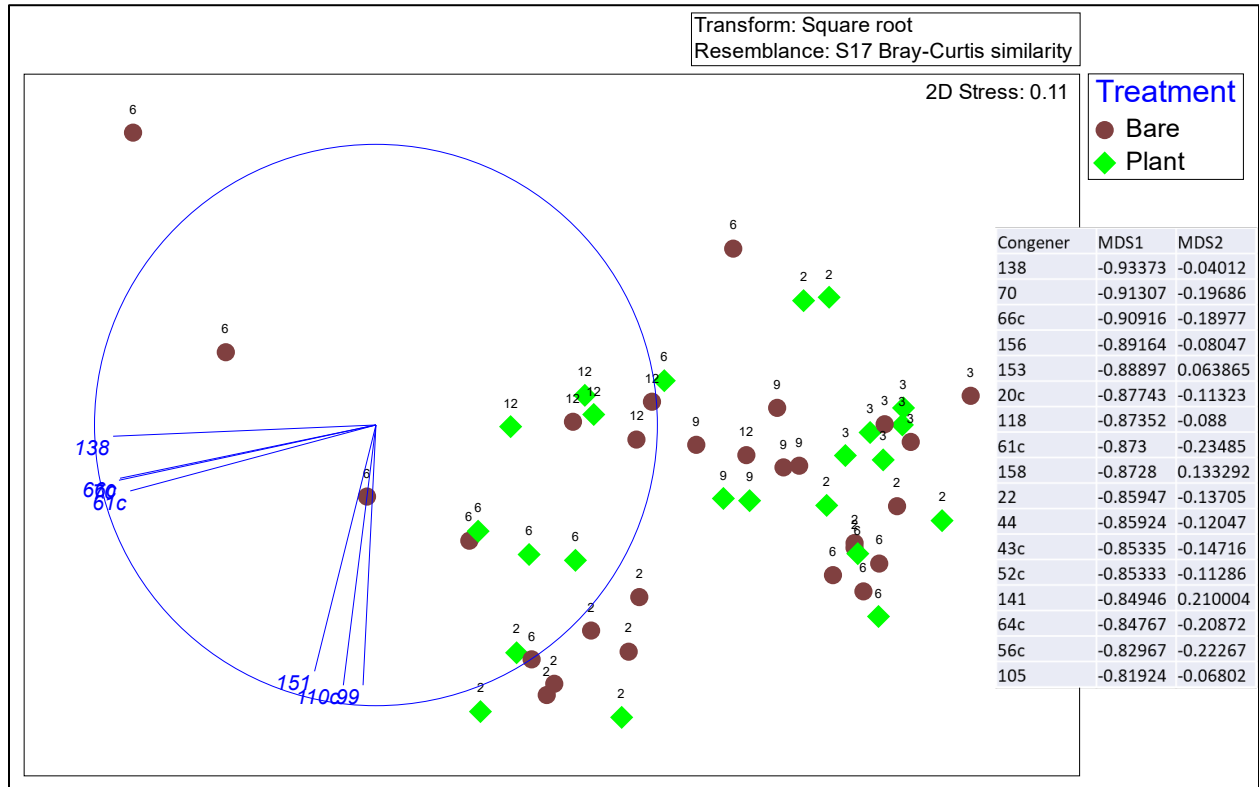

Figure 1-E. Bare vs planted BSM PCB congener similarities

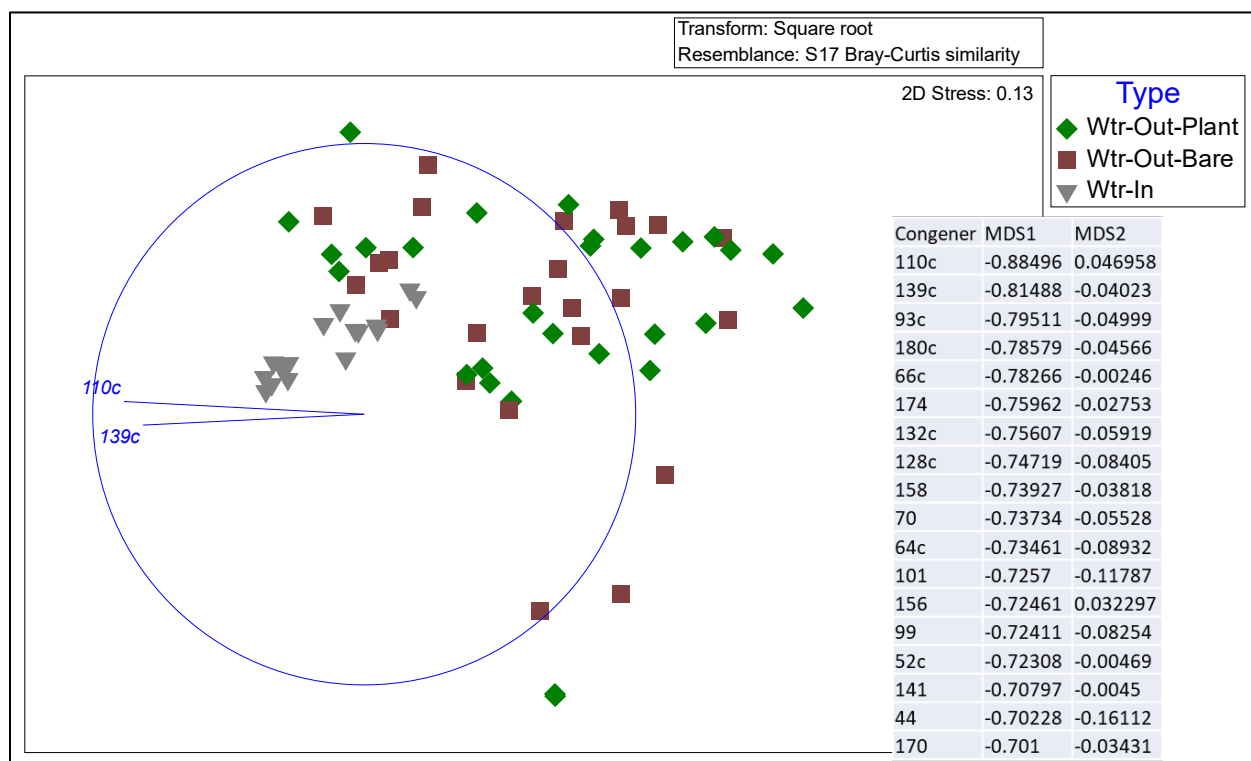

Figure 2-E. Influent compared to bare and planted effluent PCB congener similarities.

Several statistical tests were initially proposed in the QAPP. However, we elected not to pursue these on a congener by congener basis, because the multiple comparison error rate would have been high and there was little or no BMP management value in conducting this analysis. The relatively low PCB concentrations in BSM and effluents increased analytical variability, i.e. congener concentrations of 20 and 40 pg/L are not necessarily resolvable from each other even via EPA Method 1668 despite being 100% different statistically. In general, lack of precision at low PCB concentrations such as these limited our power to detect differences and our ability to detect differences would have been lower if we conducted a congener by congener analysis. We pooled results for effluent and BSM total PCBs concentrations for the bare and planted treatments based on the lack of statistical differences using the parametric ANOVA test (which is similar to the non-parametric Wilcoxon signed rank test we proposed in the QAPP).

We evaluated removal efficiencies by PCB homolog instead of conducting a congener-by-congener analysis as proposed in the QAPP. We used this approach because PCB off-gassing, volatility, bioaccumulation rates and fate variables are heavily dependent on their degree of chlorination. We wanted to illustrate the 85+ percent efficacy of PCB removal across all homolog groups to support management decisions about BSM as a BMP in general.
